This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

**Usage guidelines**

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.

+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.

+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.

+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

**About Google Book Search**

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at `http://books.google.com/`

# ARRANGEMENT OF THE ANNUAL REPORTS OF THE WAR DEPARTMENT FOR THE YEAR ENDING JUNE 30, 1900.

---

**VOLUME I. Parts 1–13.—Report of the Secretary of War and all other reports except those of the Chief of Engineers and the Chief of Ordnance.**

**VOLUME II. Parts 1–8.—Report of the Chief of Engineers.**

**VOLUME III. Report of the Chief of Ordnance.**

---

## CONTENTS OF VOLUME I.

**Part 1.—Reports, as follows:**
- Secretary of War.
- Board of Ordnance and Fortification.
- Commissioners of National Military Parks:
  - Chickamauga and Chattanooga.
  - Gettysburg.
  - Shiloh.
  - Vicksburg.
- United States Military Academy, West Point, N. Y.:
  - Board of Visitors.
  - Superintendent.
- Soldiers' Home, District of Columbia:
  - Board of Commissioners.
  - Inspector-General, United States Army.
- National Home for Disabled Volunteer Soldiers.

**Part 2.—Reports of Bureau Chiefs:**
- Adjutant-General.
- Inspector-General.
- Judge-Advocate-General.
- Quartermaster-General.
- Acting Commissary-General of Subsistence.
- Surgeon-General.
- Paymaster-General.
- Chief Signal Officer.
- Record and Pension Office.

**Part 3.—Report of the Lieutenant-General Commanding the Army and Department Commanders:**

Lieutenant-General.
Adjutant-General.
Inspector-General.
Department of the East.
Department of the Lakes.
Department of the Missouri.
Department of Texas.
Department of Dakota.
Department of the Colorado.
Department of California.
Department of the Columbia.
Department of Alaska.
Division of Cuba:
  Department of Matanzas and Santa Clara.
  Department of Western Cuba.
  Department of Santiago and Puerto Principe.
Department of Porto Rico.
Infantry and Cavalry School.
Cavalry and Light Artillery School.

**Part 4.—Report of the Lieutenant-General Commanding the Army and Department Commanders**—Continued.

Department of Habana and military governor city of Habana.
Division of the Philippines (Major-General Otis).

**Part 5.—Report of the Lieutenant-General Commanding the Army and Department Commanders**—Continued.

Division of the Philippines (Major-General MacArthur).
  Department of Northern Luzon.
  Department of Southern Luzon.
  Department of Visayas.
  Department of Mindanao and Jolo.

**Part 6.—Report of the Lieutenant-General Commanding the Army**—Continued.

Military operations in the Philippine Islands.

**Part 7.—Report of the Lieutenant-General Commanding the Army**—Continued.

Military operations in the Philippine Islands—Continued.

NOTE.—The annual reports of Maj. Gen. Henry C. Corbin, Adjutant-General U. S. A., and Brig. Gen. Joseph C. Breckinridge, Inspector-General U. S. A., to the Lieutenant-General Commanding the Army, are published in volume 1, part 3.

The operations of the War Records Office are contained in the report of Brig. Gen. Fred C. Ainsworth, Chief of the Record and Pension Office.

# REPORT OF THE ADJUTANT-GENERAL TO THE SECRETARY OF WAR.

# ANNUAL REPORT

OF THE

# ADJUTANT-GENERAL OF THE ARMY.

---

War Department,
Adjutant-General's Office,
*Washington, October 20, 1900.*

Sir: The following returns of the Regular Army and of the United States Volunteers now in the service of the United States are respectfully submitted:

A.—General return, or exhibit, showing the actual strength of the Army according to the latest returns received.

B.—Distribution of the Army of the United States.

C.—Statement showing the monthly strength and losses from all causes in the Army of the United States between July 1, 1899, and June 30, 1900.

D.—Strength of the Army by divisions and departments between July 1, 1899, and June 30, 1900.

E.—Strength of the Regular Army of the United States June 30, 1899, and June 30, 1900, with losses from all causes between those dates.

F.—Strength of the volunteers of the United States June 30, 1900, with losses from all causes since July 1, 1899.

G.—Deaths in the Army of the United States between July 1, 1899, and June 30, 1900.

H.—Table showing dates of sailing and troops sent to the Philippine Islands.

I.—Casualties in actions of troops serving in China between July 1 and October 1, 1900.

K.—Chronological list of actions, with losses, in the Philippine Islands, between February 4, 1899, and June 30, 1900.

L.—List of retirements, resignations, deaths, etc., among officers of the Army since last annual report.

M.—Deaths in the Philippine Islands between February 4, 1899, and June 30, 1900.

N.—Statistical exhibit of strength of volunteer forces called into service during the war with Spain, with losses from all causes.

The military forces now in the service of the United States are composed as follows:

### REGULAR ARMY.

| | Officers. | Enlisted men. | Total. | Officers holding commissions in volunteers. |
|---|---|---|---|---|
| General officers | 8 | .......... | 8 | 1 |
| Adjutant-General's Department | 15 | .......... | 15 | 2 |
| Inspector-General's Department | 9 | .......... | 9 | 1 |
| Judge-Advocate-General's Department | 8 | .......... | 8 | 1 |
| Quartermaster's Department | 58 | 105 | 163 | 19 |
| Subsistence Department | 22 | 173 | 195 | 3 |
| Medical Department | 180 | [a] 4,360 | 4,540 | 25 |
| Pay Department | 26 | .......... | 26 | .......... |
| Corps of Engineers | 126 | 687 | 813 | 1 |
| Ordnance Department | 61 | 664 | 725 | .......... |
| Signal Corps | 11 | 748 | 759 | 6 |
| Chaplains | 30 | .......... | 30 | .......... |
| Record and Pension Office | 2 | .......... | 2 | .......... |
| Military Academy | .......... | 279 | 279 | .......... |
| Electrician sergeants | .......... | 42 | 42 | .......... |
| Total | 556 | 7,058 | 7,614 | 59 |
| Ten regiments of cavalry | 472 | 12,083 | 12,555 | 67 |
| Seven regiments of artillery | 351 | 10,978 | 11,329 | 29 |
| Twenty-five regiments of infantry | 1,156 | 35,428 | 36,584 | 78 |
| Indian scouts and recruits | .......... | 2,674 | 2,674 | .......... |
| Grand total | 2,535 | 63,861 | 66,396 | [b] 233 |

### UNITED STATES VOLUNTEERS.

| | Officers. | Enlisted men. | Total. | Officers holding commissions in Regular Army. |
|---|---|---|---|---|
| General officers and staff corps | 263 | .......... | 263 | 102 |
| One regiment of cavalry | 50 | 1,025 | 1,075 | 5 |
| Squadron Philippine cavalry | 15 | 451 | 466 | 3 |
| Twenty-four regiments of infantry | 1,189 | 28,724 | 29,913 | 118 |
| Porto Rico regiment | 31 | 879 | 910 | 5 |
| Total | 1,548 | 31,079 | 32,627 | [b] 233 |

### RECAPITULATION.

| | |
|---|---|
| Regular Army | 66,396 |
| United States Volunteers | 32,627 |
| | 99,023 |
| | [b] 233 |
| Grand total | 98,790 |

---

[a] The Hospital Corps is not included in the effective strength of the Army, nor counted as a part of the enlisted force provided by law.

[b] The number of officers in the Regular Army holding volunteer commissions is deducted from aggregate strength to avoid counting twice.

The following statement gives the present distribution of the regular and United States Volunteer forces:

| | United States. | | Alaska. | | Porto Rico. | | Cuba. | | Philippine Islands. | | Hawaiian Islands. | | China. | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | Officers. | Enlisted men. | Officers. | Enlisted men. | Officers. | Enlisted men. | Officers. | Enlisted men. | Officers. | Enlisted men. | Officers. | Enlisted men. | Officers. | Enlisted men. |

| Grand total... | 240 | 183 | 12 | 22,592 | 2,004 | 3,993 | 2 | 29,026 |

## THE REGULAR ARMY.

Under the provisions of section 2 of the act approved March 2, 1899, for increasing the efficiency of the regular military establishment, the increase therein provided is to continue in service not later than July 1, 1901, and thereafter the enlisted force of the line of the Army is to be reduced to the number prescribed by prior laws, exclusive of the additions made to the artillery under this act. Unless, therefore, suitable provision is made by Congress to meet the existing emergencies of the military service, the enlisted strength of the Army will, at that date, be reduced to 29,025 men.

In pursuance of the plan, approved by the Secretary of War, of establishing depot battalions for the purpose of drill instruction and recruitment, the following battalions have been ordered home from the Philippine Islands to stations as follows:

*April 1, 1900.*—The first battalion of the Fourteenth Infantry (Companies A, B, C, and D—4 officers and 211 men) sailed on the *Sherman* and arrived at San Francisco on the 26th of that month, Company A taking post at Fort Brady, Mich., and the other three companies at Fort Wayne, Mich.

*June 19, 1900.*—The first battalion of the Eighteenth Infantry (Companies A, B, C, and D—20 officers and 293 men) sailed on the *Hancock*, arriving at San Francisco July 13. The first three companies were assigned to the Presidio, San Francisco, Cal., and Company D to Fort Mason, Cal.

*July 1, 1900.*—The third battalion of the Twenty-third Infantry (Companies I, K, L, and M—5 officers and 182 men) sailed on the *Warren* and arrived at San Francisco July 27, Companies I and L taking station at Fort Douglas, Utah, and Companies K and M at Fort D. A. Russell, Wyo.

## THE VOLUNTEER ARMY.

Of the 200,000 men called into the military service under the act of Congress dated April 22, 1898, for the prosecution of the war then existing between the United States and Spain, all had been mustered out of service at the date of last report with the exception of the First Tennessee Infantry. That regiment, then en route for the United States, was mustered out at San Francisco November 23, 1899.

## UNITED STATES VOLUNTEERS.

Of the additional military force of 35,000 men authorized by the act of March 2, 1899, the Eleventh Cavalry and the Twenty-sixth to the Thirty-second Infantry, inclusive, were in service in the Philippines at the date of the last report. The other organizations of that force arrived at Manila on the date set opposite each regiment, as follows:

| Organization. | Date. | Organization. | Date. |
|---|---|---|---|
| Thirty-fourth Infantry | Oct. 11, 1899 | Forty-sixth Infantry | Dec. 15, 1899 |
| Thirtieth Infantry | Oct. 21, 1899 | Forty-third and Forty-fourth Infantry | Dec. 19, 1899 |
| Twenty-sixth Infantry | Oct. 24, 1899 | Forty-seventh Infantry | Dec. 22, 1899 |
| Twenty-seventh, Thirty-second, and Thirty-third Infantry | Oct. 27, 1899 | Thirty-eighth and Fortieth Infantry | Dec. 27, 1899 |
| Twenty-ninth Infantry | Nov. 2, 1899 | Forty-second Infantry | Dec. 31, 1899 |
| Thirty-fifth Infantry | Nov. 7, 1899 | Forty-ninth Infantry | Jan. 2, 1900 |
| Twenty-eighth Infantry | Nov. 23, 1899 | Forty-first Infantry | Jan. 5, 1900 |
| Thirty-first Infantry | Nov. 27, 1899 | Forty-eighth Infantry | Jan. 25, 1900 |
| Thirty-ninth and Forty-fifth Infantry | Dec. 7, 1899 | | |

In view of the briefness of the unexpired service of the volunteers it was thought proper to discharge those who had been invalided to San Francisco from time to time, rather than return them to duty in the Philippine Islands.

On September 6, 1900, there were 435 invalided volunteers in the Department of California—234 in general hospitals, 164 at the Presidio, San Francisco, and 37 at Fort Mason; 385 being reported as convalescent and able to travel were discharged.

To avoid confusion and guard against loss of records, instructions were given for careful preparation of descriptive lists of discharged men with notations relating to discharge, pay due, etc., to be listed by regiments and filed at department headquarters pending arrival of the regiments for discharge. All discharged volunteer soldiers able to travel with comfort and safety as to health were encouraged to go directly to their homes, and every assistance to this end was given them. Special terms were effected with the railroads, the rate to Chicago being made at $43.75 from San Francisco, a reduction of nearly 17 per cent on the regular fare (the best that could be obtained), and arrangements were made whereby tickets would be sold to the men at the military posts.

To meet the many requests of officers and men of the United States Volunteers who desire to leave the military service to engage in business in the Philippines and cast their fortunes with those islands, the Secretary of War, on October 18, 1900, authorized the commanding general of the Division of the Philippines to accept their resignations or order their discharges.

## MILITARY GEOGRAPHICAL DEPARTMENTS.

The present territorial limits of the military geographical departments are as follows:

*Division of the Philippines.*—The Philippine Islands.

*Department of Alaska.*—The Territory of Alaska.

*Department of California.*—The States of California and Nevada, and the Hawaiian Islands.

*Department of the Colorado.*—The States of Wyoming (except so much thereof as is embraced in the Yellowstone National Park), Colorado, and Utah, and the Territories of Arizona and New Mexico.

*Department of the Columbia.*—The States of Washington, Oregon, Idaho (except so much of the latter as is embraced in the Yellowstone National Park).

*Department of Dakota.*—The States of Minnesota, North Dakota, South Dakota, Montana, and so much of Wyoming and Idaho as is embraced in the Yellowstone National Park.

*Department of the East.*—The New England States, New York, New Jersey, Pennsylvania, Delaware, Maryland, District of Columbia, West Virginia, Virginia, North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, and Louisiana.

*Department of the Lakes.*—The States of Wisconsin, Michigan, Illinois, Indiana, Ohio, Kentucky, and Tennessee.

*Department of Mindanao and Jolo.*—Includes all the islands of the Philippine Archipelago not embraced in the Departments of Northern Luzon, Southern Luzon, and of the Visayas.

*Department of the Missouri.*—The States of Iowa, Nebraska, Missouri, Kansas, and Arkansas, the Indian Territory, and the Territory of Oklahoma.

*Department of Northern Luzon.*—Includes all that part of the island of Luzon north of Laguna de Bay and the province of Laguna, the same being the provinces of Abra, Bontoc, Benguet, Bataan, Bulacan, Cagayan, Ilocos, Infanta, Morong, Norte, Ilocos Sur, La Isabela de Luzon, Lepanto, La Union, Nueva Vizcaya, Nueva Ecija; all that portion of Manila north of the Pasig River, Principe, Pangasinan, Pampanga, Tarlac, and Zambales, and all the islands in the Philippine Archipelago north of Manila Bay and the provinces above named.

*Department of Porto Rico.*—The island of Porto Rico and the islands and keys adjacent thereto.

*Department of Southern Luzon.*—Includes island of Samar and all the remaining part of the island of Luzon, the same including the following provinces: Albay, Batangas, Camarines Norte, Camarines Sur, Cavite, La Laguna, Manila south of the Pasig, and Tayabas, and all islands of the Philippine archipelago which lie south of the south line of the Department of Northern Luzon, as above described, including the island of Polillo, and north of a line passing southeastwardly through West Pass of Apo to the twelfth parallel of north latitude; thence easterly along said parallel to 124° 10′ east of Greenwich, but including the entire island of Masbate; thence northerly through San Bernardino Straits.

*Department of Texas.*—The State of Texas.

*Department of the Visayas.*—Includes all islands (except island of Samar) south of the southern line of the Department of Southern Luzon and east of longitude 121° 45′ east of Greenwich and north of the ninth parallel of latitude, excepting the island of Mindanao and all islands east of the Straits of Surigao; headquarters, Iloilo, P. I.

The strength of the above-named divisions and departments was as follows June 30, 1900:

| | Officers. | Enlisted men. | Total. |
|---|---|---|---|
| Division of— | | | |
| Cuba | 435 | 9,421 | 9,856 |
| The Philippines | 2,343 | 61,083 | 63,426 |
| Department of— | | | |
| Alaska | 33 | 1,002 | 1,035 |
| California | 67 | 1,364 | 1,431 |
| The Colorado | 70 | 1,844 | 1,914 |
| The Columbia | 33 | 984 | 1,017 |
| Dakota | 51 | 1,120 | 1,171 |
| The East | 264 | 7,728 | 7,992 |
| The Lakes | 58 | 1,408 | 1,466 |
| The Missouri | 80 | 2,392 | 2,472 |
| Porto Rico | 132 | 3,204 | 3,336 |
| Texas | 31 | 1,169 | 1,200 |
| Total | 3,597 | 92,719 | 96,316 |

## CUBA.

*Division of Cuba.*—Consists of the geographical departments and provinces of the island of Cuba.

*Department of Eastern Cuba.*—The provinces of Santiago and Puerto Principe.

*Department of Western Cuba.*—The provinces of Habana, Pinar del Rio, Matanzas, and Santa Clara.

The following is a summary of the movements of troops from and to the island of Cuba:

### FROM CUBA.

*September 13, 1899.*—Companies A, B, C, and D, First Infantry, for Fort Leavenworth, Kans.; headquarters and Companies I, K, L, and M, Eighth Infantry, for Fort Snelling, Minn.

*September 17, 1899.*—Companies E, F, G, and H, Second Infantry, for Fort Thomas, Ky.

*September 20, 1899.*—Companies I, K, L, and M, Tenth Infantry, for Fort Crook, Nebr. (Home battalion.)

*September 23, 1899.*—Companies I, K, L, and M, Fifth Infantry, for Fort Sheridan, Ill.

*October 15, 1899.*—Batteries B, C, D, and E, Second Artillery, for Fort McPherson, Ga. (Home battalion.)

*October 16, 1899.*—Companies E, F, G, and H, Fifteenth Infantry, for Madison Barracks, N. Y. (Home battalion.)

*January 5, 1900.*—Headquarters and Companies A, B, C, D, I, K, L, and M, Fifteenth Infantry; headquarters and Companies A, C, and D, for Plattsburg Barracks, N. Y.; Company B, for Fort Ethan Allen, Vt.; and Companies I, K, L, and M, for Fort Columbus, New York Harbor.

*January 19, 1900.*—Troops A, B, C, and D, Eighth Cavalry, for Fort Riley, Kans. (Home battalion.)

*July 16, 1900.*—Companies E and F, Eighth Infantry, for Fort Snelling, Minn.

*July 19, 1900.*—Headquarters and Companies I, K, L, and M, Second Infantry, for Fort Thomas, Ky.; headquarters and Companies A, B, C, D, G, and H, Eighth Infantry, for Fort Snelling, Minn. (Home battalion.)

*July 20, 1900.*—Headquarters and Companies A, C, F, and G, Fifth Infantry, for Fort Sheridan, Ill. (Home battalion.)

*August 1, 1900.*—Companies B, D, E, and H, Fifth Infantry, for Fort Sheridan, Ill. (Home battalion.)

*August 4, 1900.*—Companies K, L, and M, First Infantry, for Fort Leavenworth, Kans. (Home battalion.)

*August 9, 1900.*—Headquarters and Companies E, F, G, and H, First Infantry, for Fort Leavenworth, Kans.; Light Battery F, Second Artillery, for Washington Barracks, D. C.

*September 2, 1900.* Company I, First Infantry, for Fort Leavenworth, Kans. (Home battalion.)

The above movements have withdrawn from the troops in the island of Cuba four troops of cavalry, three batteries of artillery, and the equivalent of five regiments of infantry.

### PORTO RICO.

*August 4, 1900.*—Headquarters and Troops K and L, Fifth Cavalry, left Porto Rico to take post at Fort Myer, Va.

*August 7, 1900.*—Troops I and M, Fifth Cavalry, for Fort Myer, Va.

*August 8, 1900.*—Companies A, B, C, and D, Eleventh Infantry, for Fort Columbus, New York Harbor. (Home battalion.)

On the 30th of April, 1900, Brig. Gen. George W. Davis, U. S. Volunteers, commanding the Department of Porto Rico, upon the recommendation of the governor elect, established six civil executive departments, to facilitate the transfer of the civil duties of the military government of the island.

Hon. Charles H. Allen, having been inaugurated as governor of Porto Rico on May 1, 1900, General Davis, on the same day, formally announced the transfer, to the duly appointed civil officers of the Government of Porto Rico, of the military control over civil affairs which had heretofore been exercised by the department commander.

## CHINA.

The perilous situation of the members of the American legation at Pekin and their complete isolation in the midst of an unruly and murderous populace last spring demanded prompt action for their relief. The Commanding General, Division of the Philippines, was therefore instructed by cable, June 16, to send at once a regiment of infantry to Taku, and, six days later, Maj. Gen. Adna R. Chaffee, U. S. Volunteers, was selected to command the United States troops to compose the China relief expedition.

The following is a summary of events in China subsequent to the firing by the Taku forts on foreign war vessels which resulted in the surrender of the forts June 17, and to the capture of the east arsenal at Tientsin by the allied forces on the 27th of the same month:

*July 3.*—Headquarters and eight troops of the Sixth Cavalry sailed from San Francisco on the *Grant* for China.

*July 6.*—Ninth Infantry landed at Taku.

*July 11.*—Two battalions Ninth Infantry reached Tientsin.

*July 13.*—Severe engagement at Tientsin between the allied forces and the Chinese. The Ninth Infantry suffered heavily, losing Colonel Liscum and 17 men killed and 5 officers and 72 men wounded.

*July 14.*—Tientsin captured by the allies; Third Battalion, Ninth Infantry, reached that place.

*July 15.*—Light Battery F, Fifth Artillery, and two battalions Fourteenth Infantry sailed from Manila for China.

*July 17.*—Headquarters and four companies Fifteenth Infantry sailed from San Francisco on the *Sumner* for China.

*July 26.*—Two battalions Fourteenth Infantry, on the *Indiana*, arrived at Taku.

*July 27.*—Light battery F, Fifth Artillery, on the *Flintshire*, arrived at Taku.

*July 28.*—General Chaffee, with headquarters and eight troops Sixth Cavalry, arrived at Taku.

*July 29.*—Four batteries Third Artillery sailed from San Francisco on the *Hancock* for China.

*August 5.*—Pietsang captured by the allied forces. No casualties to the United States troops.

*August 6.*—Light Battery F, Fifth Artillery, Ninth and Fourteenth Infantry, participated in battle of Yangtsung, sustaining a loss of 7 men killed and 1 officer and 62 men wounded.

*August 9.*—Japanese, British, Russian, and American troops advanced to Ho-si-wu, the Chinese flying after firing first shots.

*August 14.*—Pekin entered at 5 p. m. by the allied forces.

*August 14–15.*—Capture of Pekin by the allied forces, in which Light Battery F, Fifth Artillery, and the Ninth and Fourteenth Infantry sustained a loss of Capt. Henry J. Reilly and 5 men killed and 30 men wounded.

*August 16.*—Brig. Gen. Thomas H. Barry, U. S. Volunteers, and four companies Fifteenth Infantry arrived at Taku.

*August 19.*—Action near Tientsin, in which Sixth Cavalry had 6 men wounded.

*August 21.*—Four batteries Third Artillery, on the *Hancock*, arrived at Taku.

*August 28.*—The allied forces formally entered the palace grounds at Pekin.

The relief of the American legation, following the capture of the Chinese capital, transferred to the domain of diplomacy the settlement of the proper redress for the outrages to the representatives of the American Republic and to its citizens residing in that country. It was therefore determined to withdraw the United States troops, leaving only a legation guard, to consist of four troops of cavalry, one light battery, and one regiment of infantry, under command of Major General Chaffee, U. S. V., he being instructed to send the remainder of his force to Manila.

The casualties in the several actions in China between July 1 and October 1, 1900, were as follows:

| Organization. | Killed. | | Wounded. | | Total. | | Aggregate. |
|---|---|---|---|---|---|---|---|
| | Officers. | Enlisted men. | Officers. | Enlisted men. | Officers. | Enlisted men. | |
| Hospital Corps | | | | 1 | | 1 | 1 |
| Sixth United States Cavalry | | | | 6 | | 6 | 6 |
| Fifth United States Artillery | 1 | | | 3 | 1 | 3 | 4 |
| Ninth United States Infantry | 1 | 19 | 7 | 81 | 8 | 100 | 108 |
| Fourteenth United States Infantry | | 11 | | 79 | | 90 | 90 |
| Total | 2 | 30 | 7 | 170 | 9 | 200 | 209 |

## THE MILITARY ACADEMY.

The Military Academy at West Point is in a most satisfactory condition. The provision which Congress made at its last session for an increase of 100 cadets filled a need long felt by the service, and will result in great benefit both to the Army and to the country at large.

The wear and tear of time has told on many of the buildings, and much money has been spent from time to time in repair of buildings that would have been better spent in the erection of new ones. This question has been fully considered by a board of officers convened for this special purpose, the report of which is so thorough and satisfactory that it is submitted in its entirety and your favorable consideration requested. The Superintendent of the Academy will be instructed to submit special estimates based on the report of this board. In this connection the report of the Board of Visitors to the Academy for this year, in which the needs and requirements of the institution have received thorough investigation, is of unusual interest and is commended to your careful attention.

United States Military Academy,
*West Point, N. Y., September 25, 1900.*

The board of officers appointed to consider and report upon the capacity of the present plant of the United States Military Academy, has the honor to report as follows:

An adequate presentation of this subject requires that it should be considered under two general heads: (1) The character and condition of the existing plant; (2) the nature of the present and future conditions it is called upon to sustain.

A summary of the structures constituting the Military Academy and post of West Point is given in the table below.

| | |
|---|---|
| Barracks (1 cadet, 1 band, 1 engineer, 1 army service, 1 cavalry, 1 artillery) | 6 |
| Academic building | 1 |
| Headquarters building | 1 |
| Mess hall | 1 |
| Gymnasium | 1 |
| Chapel | 1 |
| Library | 1 |
| Hospitals (1 cadet, 1 enlisted men) | 2 |
| Store (cadet quartermaster) | 1 |
| Riding hall | 1 |
| Memorial hall | 1 |
| Ordnance laboratory | 4 |
| Observatory | 1 |
| Hotel | 1 |
| Quartermaster's carpenter and blacksmith shops | 1 |
| Quartermaster's storehouse | 1 |
| Equipment shed and commissary storehouse | 1 |
| Post exchange | 1 |
| Gas houses | 2 |
| Gas tanks | 3 |
| Government stables | 2 |
| Livery stable | 1 |
| Bakery | 1 |
| Filter houses | 2 |
| Water house | 1 |
| Officers' quarters (sets for married officers, 41; sets for bachelor officers, 16) | 57 |
| Detached enlisted men (single sets, 6; double sets, 25; quadruple sets, 5) | 36 |
| Employees and master of sword (single sets, 3; double sets, 2; triple sets, 1, including master of sword, Kinsley House, 1) | 7 |
| Band leader | 1 |
| Guardhouses (south gate, general, cadet) | 3 |
| Bath houses (cadet, soldier) | 2 |
| Boiler house (for heating buildings near cadet area) | 1 |
| Cold-storage (one at present used for storehouse and temporary stable) | 3 |
| Waiters' quarters (at Mess Hall) | 1 |
| Laundries (cadet and hotel) | 2 |
| Magazine | 1 |
| Children's schoolhouses | 2 |
| Store | 1 |
| Boathouses and pontoon house | 4 |
| Firing house, magazine, two shot houses (at water battery) | 4 |
| Wooden structures for miscellaneous purposes | 26 |

Exclusive of outbuildings, reservoirs, and batteries, the Military Academy and post of West Point consists of 163 structures.

The aggregate of the appropriations for the buildings which have housed the Academy during the first century of its existence is about $2,700,000. These structures have been erected by the authority of Congress at irregular intervals from the founding of the Academy in 1802 to the present day, to meet the immediate requirements of the institution as it gradually grew with the development of the country. At the beginning of the second century of its existence we find that only two of the buildings erected for the use of the cadets are of sufficient size to accommodate the corps as enlarged by the recent act of Congress. A brief analysis of the principal buildings will show the limitations of each and the enlargements which are absolutely essential.

### THE CADET BARRACKS.

The cadet barracks, which replaced the old brick barracks of 1815 and 1817, was erected in 1851, to meet the growth of the Corps of Cadets; an addition was made to it in 1882. It is a four-storied granite building of imposing appearance, costing about $186,000. As it now stands the barracks has 180 rooms, each designed for two cadets. In addition to the above it has quarters for 4 bachelor officers. As the Corps of Cadets now numbers 429, it necessitates the placing of three cadets in each of 69 rooms. Even were quarters constructed elsewhere for the above 4 officers, the barracks would have but 192 available rooms, of accommodation for 384 cadets. The number of cadets present being 429, and the maximum number authorized by law being 481, it will be seen that an increase in barrack accommodations is absolutely essential.

The system of heating is direct radiation from a central plant by steam coils of various patterns of obsolete type. This style of heating without artificial ventilation is most pernicious and requires thorough renovation.

The basement is now a damp, unwholesome space, divided into waste rooms used for rubbish and storage. The bathrooms and sinks are combined in a separate building erected of late years in the area. This plan is inconvenient and objectionable. Those who may be sick or partially invalided are compelled, in inclement weather, to go through snow and rain to reach them. Modern sanitary plumbing renders it perfectly safe to place the sinks and baths in the basement of barracks, a change which would render available for other purposes the space in the area of barracks now occupied by these buildings.

### THE ACADEMY BUILDING.

This is a granite building constructed in 1892 at a cost of $480,000, which houses all the departments of academic instruction. It will accommodate 500 students, and therefore requires no enlargement under existing circumstances.

### THE CADET HOSPITAL.

The hospital is a granite building, constructed in 1874–1880, but never completed; only two of its four wards have been constructed. As at present constituted the regular wards will accommodate 18 patients, and an inadequately equipped convalescent ward can be made to hold 12 more, making a total of 30. The hospital accommodations are manifestly inadequate, and the building should be completed so as to provide for 50 patients. In addition to the hospital, there should be a separate and entirely new building for infectious diseases; there is at present no provision for such cases.

### THE RIDING HALL.

The present riding hall, erected in 1855, is a granite structure with wooden trussed roof, 218 by 78 feet.

For instruction in riding the classes are necessarily divided into sections. The third class is divided into four and the first and second classes each into two sections. To enable the instruction given in the hall to be thorough and to progress with effective rapidity, it is found that the size of a section should not exceed 24 cadets; 32, however, can be accommodated by making the exercises slower, and with a corresponding loss in the extent of instruction. With the increased strength of the Corps of Cadets, as recently authorized, it is probable that after the present year the maximum strength of a section of the first and second classes will vary between 50 and 60 cadets. The capacity of the riding hall should therefore be doubled.

The hall is now badly heated and lighted. The lack of proper heating causes the tan bark to freeze and cake in winter, and the defective lighting interferes with the instruction.

### THE MESS HALL.

The mess hall, a granite building erected in 1850, will seat 340 cadets, but has a cooking capacity for 300 only; its plan, however, admits of indefinite extension. There are accommodations for a force of cooks and attendants for 340 cadets. Seating accommodations for 89, and cooking arrangements for 129 cadets are lacking under existing conditions, and also provision for the necessary increase in cooks and attendants. The mess hall and kitchens should be so enlarged to accommodate at least the maximum number of cadets now authorized by law (481).

### THE CHAPEL.

The chapel is a granite building erected in 1836 with a seating capacity of 428, just sufficient to accommode the present number of cadets. As there are also present for duty 73 officers and instructors of the institution, together with members of families and friends, besides a considerable number of civilian employees, the chapel accommodations are much too small. If there be added to this the fluctuating and sometimes very large body of general visitors, it will be seen that provision should be made for a congregation of not less than 800.

### THE LIBRARY.

The library, a granite structure, is now being remodeled; when completed it will be adequate for the present and future needs of the institution.

### THE GYMNASIUM.

This building, a granite structure, was erected in 1891, and has a floor area in the gymnasium proper of 6,300 feet. It will not properly accommodate for purposes of instruction sections of over 40 men at one time. The fourth class is necessarily divided into three sections, each of which at present contains 60 men. The floor area should therefore be increased one-half. In addition to this provision is needed for increased machinery, storage, dressing rooms, enlargement of swimming tank, and the various other accessories of the gymnasium.

### THE OBSERVATORY.

The observatory is a granite structure erected in 1882. Its accommodations are ample for the present needs of the institution.

### THE CADET LAUNDRY.

The present plant can properly do the work for 250 cadets during the summer, running ten hours per day, and for 400 cadets in the winter, running eight hours per day. Provision should be made for at least 375 cadets during the summer and 481 during the winter. It is desirable also that during the heated spell' the hours of work should not be excessive and that the plant should do all the work easily under normal conditions.

### THE CADET STORE.

The present building has a capacity for properly supplying 300 cadets. It should be able to supply the authorized maximum of 481.

### THE CADET GUARDHOUSE.

This is an antiquated brick building containing 11 small rooms, which are used for the following purposes: Offices for the commandant of cadets and his 8 assistants, 3 clerks, and cadet officer of the day; a guardroom, engine room, and tool room. Provision should be made for 9 officers, 3 clerks, room for the guard, room for orderly musicians, and for 6 armories, and 1 storeroom.

### THE ADMINISTRATION BUILDING.

This is a granite building erected in 1871. It contains the offices of the Superintendent, the adjutant, and the quartermaster, and is the depository of most of the records of the post. Many of the rooms in this building are overcrowded and an increase in floor space is very desirable.

### THE SUMMER ENCAMPMENT.

The present summer encampment has a capacity of 140 tents, accommodating 280 cadets. To accommodate properly the maximum number of cadets likely to be in camp, under the present authorized maximum strength (481) of the corps of cadets, 46 additional tents will be required. This will provide a tent for every 2 cadets, the maximum number which can be put in a tent without crowding and discomfort.

The additional ground required for the encampment can be obtained by razing the parapet and filling in the ditch of Fort Clinton, and by removing and transplanting a number of trees north of the present camp.

### THE OFFICERS' QUARTERS.

The buildings occupied by the officers of the Military Academy as quarters are of every variety of type, construction, and material, and of all ages—from the earliest days of the Academy to the present date. The most substantial are those occupied by the Superintendent and heads of departments; some of these are of stone and the rest of brick. They are all old structures, some of them dating from 1816. The remaining houses are of brick or wood and have been variously altered and added to. Upon the older buildings very much money has been expended in repairs, and as the appropriations for repairs cover the entire plant of the institution it is impossible to make thorough renovations. As a consequence repairing by driblets goes on from year to year at a very large aggregate cost and with only temporary results.

None of the older sets of quarters are up to the standard of modern domestic architecture either in plan or conveniences, and as a rule are very far below the standard adopted in the quarters recently erected by the Government at army posts.

For bachelor officers convenience and economy are best subserved by arrangement in suites in a single building. There are now 23 bachelor officers assigned to the Academy; for their accommodation there is but one such set of bachelor quarters, designed for 8 officers. The other bachelor officers occupy rooms in the cadet barracks and in the quarters of married officers. With less active military operations than at present the proportion of bachelor officers will tend to increase and a building providing for about 20 suites should be erected on a convenient site adjacent to the mess building.

There are at present available 41 sets of married officers' quarters, many of which are small, inadequate, and without modern conveniences, and others of the grade of cheap tenements and entirely unfit for occupancy. As there are 50 married officers on duty here, there is a balance of 9 unprovided for. Temporary arrangements entailing great inconvenience and risk to health have been effected to meet the present embarrassments. Nine sets of new quarters are required to properly provide for immediate needs, aside from all questions of removal and replacement of old sets. The quartermaster reports that at least 7 of the old sets should be immediately removed and replaced by new ones, and in this the board concurs.

### THE BARRACKS FOR CAVALRY DETACHMENT.

The present brick building will accommodate 95 men, which is sufficient for all present needs, but its location is such that it will interfere with any enlargement of the riding hall, and should be moved to another site.

### THE STABLES FOR CAVALRY HORSES.

The present brick stables provide stalls for 116 horses. The number of horses required is determined by the size of the first and second classes. All of the first class and half of the second class are required to attend squadron drill together. This will demand at least 160 horses in the near future. Stabling, therefore, for at least 44 additional horses must be erected. These stables also interfere with the enlargement of the riding hall, and should be moved to another site.

### THE ENGINEER BARRACKS.

This brick building was completed in 1858; it has a capacity of 50 men—the strength of the company when it was erected. The authorized strength of an engineer company is now 150. The necessity for an enlargement is apparent.

### THE BARRACKS FOR ARTILLERY DETACHMENT.

In 1900 Congress authorized the organization of an artillery detachment of 40 men. A brick building formerly used as a barracks for the quartermaster's detachment, and subsequently for other purposes, is available for temporary use; it requires renovation.

Stables suitable for the horses of this detachment can be provided temporarily by utilizing a stone building now used as a mule stable, together with the present livery stable; both require renovation. As these are temporary and inconvenient expedients, both as regards location and character of building, new barracks and stables on a suitable site should be provided.

### THE BAND BARRACKS.

The band barracks is a brick structure which has accommodations for 25 men. The legal strength of this organization being now 40 men, increased barrack accommodation is necessary. Suitable barrack accommodation is also needed for the squad of drummers and orderlies, whose authorized strength is 24 men.

### THE ARMY-SERVICE BARRACKS.

The army-service detachment occupies a brick building which has barrack accommodation for 80 men. The authorized strength of this detachment is now 125 men.

### THE COMMISSARY BUILDING.

The old equipment shed, now in part used as a commissary building, is remote, inconvenient, and unsuited to the purpose. For administration purposes it would be desirable to house the commissary, meat contractor, and post exchange in a single building constructed for the purpose.

### THE QUARTERMASTER'S SHOPS.

The care and repair of the existing plant and the erection of many minor constructions fall upon the quartermaster of the Academy. This is already a large and responsible work, demanding experience and ability in the officer having it in charge. It is not only economical but necessary to the Government that this class of work be done in its own shops, and the necessity for a competent plant is imperative. The present enlargement of the Academy increases this work, and a corresponding increase in the plant is demanded. This would include an extension to the carpenter, saddler, blacksmith, plumber, and tinsmith shops, as well as an extension to the lime sheds and storehouse, whose capacity is already inadequate. It should be borne in mind that this post is a small town, the policing and current repairs of which are done by the members of an army-service detachment, which is comprised of laborers and mechanics of all trades.

### THE WEST POINT HOTEL.

The hotel was erected in 1829 and has been added to from time to time. It is composed of a main building of stone, stuccoed, a brick wing, also stuccoed, and various wooden additions. The present structure is deficient in accommodations, obsolete in appointments, and defective in plan. In order that the hotel may fulfill the object for which it was designed, it requires a material increase in size and complete remodeling.

### THE STABLE.

The old stable is in very bad repair and unfit for its uses, besides occupying a position which is unsightly and inconvenient. The group of buildings of which it is a part, together with the old gas works, should be removed to a more suitable site.

### THE WATER SUPPLY.

The recently constructed Lusk reservoir, designed to relieve the needs of conditions then existent, is inadequate to meet any additional demand, and the rapid increase of consumption recently brought about gives the question a very serious aspect. Any considerable diminution in rainfall, such as characterizes a moderate drought, would produce a water famine.

It is a matter of vital importance that the only available source of supply in this vicinity—i. e., Long Pond—should be immediately purchased before further increase in the price of land and before vested rights in it as a source of supply shall have been acquired by others. In the latter case its acquirement might be impossible, and the future needs of the institution as regards water supply would present insuperable difficulties.

### STEAM HEATING AND LIGHT.

The existing arrangements for heating public buildings are inadequate and unsystematic. This results naturally from the spasmodic nature of their growth and extension, one building after another having been attached to a plant originally small and located with reference to a special building.

Steam heating was first applied to cadet barracks and thence extended to include adjacent buildings. As a consequence the original plant, grown unwieldy, is objectionably located in the area of the barracks. The pipes and connections are for a large part confused and improperly laid, and the system does not include several of the public buildings, which therefore require separate plants. It would result in a great economy to the Government to have all buildings heated from a central plant, as has been done in the large posts recently built. The present method of lighting is equally objectionable and wasteful. It involves the operation and maintenance of two systems—gas and electricity—neither of which is effectively and economically organized. The gas plant is obtrusively located in a very conspicuous position, offensive both to sight and smell. The connections of both systems are confused and conflicting and the result of the same spasmodic growth as in the case of the steam-heating plant.

A central plant which shall include both heating and light, inconspicuously located, is the only proper solution of a condition which is wasteful and ineffective.

### THE SEWERAGE.

The sewer system is divided into three general drainage areas. The main sewer of the first starts from the assembly of buildings about the soldiers' hospital, follows the main road to the neighborhood of the engineer barracks, passes down the slope through the buildings associated with it, and on to the made ground of the West Shore Railroad, and thence to the river near the tunnel. The main sewer of the second area takes in the row of professors' quarters facing the river and as far as the second set south of the Superintendent's quarters, passing in rear of the first and in front of the parade group down the road to the north dock and thence to the river at a point some 200 yards to the east thereof. The main sewer of the third begins at the termination of the second in rear of officers' quarters, passes in front of the barracks and down the Highland Falls road as far as the old south gate. Its outlet passes by the riding hall and empties onto the tidal flats below the cavalry stables. This last outlet is in every way highly objectionable and dangerous to health. These mud flats are becoming each year more exposed at low tide, and already the effluvia from exposed sewage are at times very perceptible and offensive.

### CONCLUSION.

The foregoing statement makes it apparent that the existing plant of the Military Academy is wholly inadequate to its present needs. Past experience makes it highly expedient that any modifications of, or additions to, the existing plant should be undertaken upon broad and carefully considered lines, and with a view to a homogeneous development under the best conditions. The old method of temporary makeshifts and inadequate construction is not only destructive to the dignity and beauty of the institution as an architectural whole, but wasteful and extravagant in the long run. It is therefore suggested that this matter be laid before the proper authorities with the recommendation that a comprehensive plan of enlargement, to be determined by competent architects in cooperation with the authorities of the Military Academy, be carried out, the plan to be one that will not only provide for present needs, but also admit of future extension.

Special attention is also invited to the report of the Superintendent of the Military Academy relative to the hotel at West Point. The present building is old, entirely inadequate and unfit in its appointments for its purpose.

If authority be given to lease the present site on reasonable terms it is not doubted that private enterprise would provide a hotel supplied with all modern conveniences, and affording ample accommodations for all the purposes of its establishment at the Military Academy.

### THE MILITARY INFORMATION DIVISION.

All the military technical publications, dispatches, reports, etc., received from abroad have been noted, carded, and properly classified.

Many communications addressed to the War Department or its Bureaus, and written in a foreign language, have been translated.

The French-English Military Technical Dictionary, by Lieut. Cornélis De W. Willcox, United States Artillery, has been completed in three parts and issued.

Under instructions from the War Department, Capt. Stephen L'H. Slocum, Eighth Cavalry, military attaché at Lisbon, Portugal, was detailed to accompany the British forces in South Africa, and Capt. Carl Reichmann, Seventeenth Infantry, to accompany the Boer forces during the military operations in the Transvaal. Both of these officers have made a number of reports, which are interesting and valuable. Captain Slocum returned to his station and has since been transferred to St. Petersburg, while Captain Reichmann is under orders to return to the United States.

Since the last annual report the Military Information Division has prepared and issued the following-described publications:

No. 24. "A French-English Military Technical Dictionary," part 2, 1900. Part 3, 1900.
No. 25. "Reports of Explorations in the Territory of Alaska," 1899.
No. 26. "The Autumn Maneuvers of 1898," 1899.
No. 27. "The Autumn Maneuvers of 1899," 1900.
No. 28. "Report on the Island of Guam," by Brig. Gen. Joseph Wheeler, U. S. A., 1900.
No. 29. "The Organized Militia of the United States in 1898," 1900.
No. 30. "Notes on China," 1900.

In the map section the following work has been accomplished:

Map of the seat of war in Africa, one sheet, three editions.
Map of the Visayan Group, Philippine Islands, one sheet.
Second edition of Carta General del Archipelago Filipino, republished from Spanish chart, two sheets.
Copious editions and corrections to second edition of military map of the Isle of Luzon, two sheets.
Map of Northeastern China, one sheet; two editions.
Map of the Pei-Ho, China, one sheet.

During the year the map files of the division have been increased by the addition of 840 maps, including both foreign and domestic.

Many maps and charts have been mounted by the draftsmen for the use of officers of the Army, and numerous minor sketches, illustrations, drawings, etc., required by them and in the publications issued by the division, have been prepared in this section.

Much work has also been done in the preparation of maps, etc., to accompany annual reports.

The entire work of this division has been very useful and highly satisfactory. All connected with this important work are deserving of special credit.

### MILITARY ATTACHÉS.

The following is a list of the military attachés at the several embassies and legations abroad:

#### EMBASSIES.

London: Maj. Edward B. Cassatt, Twenty-seventh Infantry, United States Volunteers (first lieutenant, Fourth Cavalry).
Paris: First Lieut. T. Bentley Mott, Seventh Artillery.
Berlin: Maj. John B. Kerr, Tenth Cavalry.
St. Petersburg: Capt. Stephen L'H. Slocum, Eighth Cavalry.
City of Mexico: First Lieut. Powell Clayton, jr., Fifth Cavalry.

#### LEGATIONS.

Berne: Capt. George R. Cecil, Thirteenth Infantry.
The Hague: Lieut. Col. James N. Wheelan, Seventh Cavalry.
Copenhagen and Stockholm: Lieut. Col. W. R. Livermore, Corps of Engineers.
Brussels: Lieut. Col. James N. Wheelan, Seventh Cavalry, temporary.

Attention is again invited to the disadvantages under which our military attachés labor. In South Africa the military attachés of other nations had liberal allowances, but in the case of our attachés they had none, other than their pay and mileage, while their expenses were heavy.

It is very desirable to have military attachés at all European capitals, but the expenses incident to duty of this peculiar and delicate nature, over and above the cost of domestic establishment, are so very great that unless an officer has a private income outside of his pay he can not afford to take such a position. Under present conditions, therefore, the choice of military attachés must be restricted to the few officers who have incomes in addition to their pay, and are willing to spend their private means in the performance of this public duty.

### DETAIL OF OFFICERS.

The details of officers for necessary service calling them away from their regular duties have made a heavy but unavoidable draft on the effective strength of the several corps and line of the Army, and this drain has been made still heavier during the past two years by the detachment of officers to command volunteers.

The number of officers of the Regular Army absent on recruiting service, etc., holding commissions in the United States volunteers and performing necessary civil functions, etc., in the Philippines and Cuba, is as follows:

| | Detached duty. | Holding commissions in volunteers. | Total. |
|---|---|---|---|
| Staff corps | 6 | 59 | 65 |
| Cavalry | 71 | 67 | 138 |
| Artillery | 52 | 29 | 81 |
| Infantry | 107 | 78 | 185 |
| Total | 236 | 233 | 469 |

## APPOINTMENTS IN THE ADJUTANT-GENERAL'S AND INSPECTOR-GENERAL'S DEPARTMENTS.

The sixth section of the act of March 2, 1899, for increasing the efficiency of the Army, is as follows:

SEC. 6. That the Adjutant-General's and Inspector-General's departments shall consist of the number of officers now in those departments, respectively: *Provided*, That vacancies in the grade of major occurring in either department shall hereafter be filled from captains in the line of the Army: *And provided further*, That all such captains who have evinced marked aptitude in the command of troops shall be reported by their regimental commanders to the War Department, and shall be entitled to compete for any such vacancy under such system of examination as the President shall prescribe.

The following are the regulations established by the President under the law above cited:

*I. Applicants.*—Captains of the line "who have evinced marked aptitude in the command of troops" will be reported to the Adjutant-General of the Army by their respective regimental commanders.

In order that the manifest intention of the law may be carried out, captains who may have been detached from their regiments, and who may have evinced marked aptitude in the command of troops when not under the observation of their regimental commanders, will, in like manner, be reported to the Adjutant-General by their respective commanding officers. All captains so reported, and who desire to enter the competitive examination, will make application to the Adjutant-General of the Army, through military channels, for orders to appear for examination, and will forward at the same time such letters or recommendations from their military superiors as they may desire to submit.

*II. Reports of commanders.*—The first report of regimental commanders or commanding officers will be forwarded at once, and thereafter they will be forwarded on the 31st day of December of each year. The reports should show in detail the facts upon which they are based, what opportunities the officers reported have had, and what commands they have exercised; also the management of their companies, by the captains reported, in respect to discipline, sanitation, and the care of men.

*III. Examinations.*—The examination will be dual: First, by divisional or departmental boards, and, secondly, by a central board at Washington. The primary board will conduct the physical examination of the applicants and a written examination on questions prepared by the central board. The central board will examine the papers submitted, together with the records of the applicants, and mark them, giving each subject its relative weight, as follows:

| Subject. | Relative weights. |
|---|---|
| Military and personal record, and aptitude for staff service | 12 |
| Drill regulations, all arms | 3 |
| Minor tactics | 3 |
| Topography | 1 |
| Law (constitutional, international, and military, and law of evidence) | 2 |
| Hygiene of posts and camps | 2 |
| Functions of the Adjutant-General's and Inspector-General's departments, correspondence, staff administration | 3 |
| Money and property accountability | 1 |
| Hippology | 1 |
| Logistics | 2 |

*IV. Boards.*—A central board, composed of an officer each of the Adjutant-General's Department and the Inspector-General's Department and an officer of the line not below the rank of major, will be convened at Washington. It will prepare sets of questions on the subjects specified and note the time to be allowed for answering each set. The questions so prepared will be sent to the divisional and departmental boards, and upon their return will be carefully examined and marked by the central board. The central board will then mark the candidates on their records, basing its action on the official records of the War Department, reports of regimental and other commanders, letters and papers submitted by the applicants, and all available sources of information as to the military and personal character of the applicants and their aptitude for the duties of the position sought. On the completion of the marking the names of the applicants will be arranged in a list according to relative merit, and the officers will be recommended for appointment in the order in which their names appear on such list. Any officer whose name shall stand lower than thirty on such list will be ineligible for further competition.

Boards will be convened at such times as the Secretary of War may direct, by the commanding general Division of Cuba, and by the commanders of departments not included therein, or by as many of them as may be necessary, at the headquarters of such division or departments. Each board will consist of three officers, preferably field officers, selected from the line, adjutant-general's department, or inspector-general's department, and two medical officers. The duties of the latter will be confined to the physical examination of the applicants. The other members of the board will supervise the written examination on the questions prepared by the central board, and on the completion of the examination will send the papers, under seal, to the adjutant-general for transmission to the central board. The time occupied in the preparation of each paper will be noted.

The members of all examining boards will be sworn to faithfully and impartially perform their duties.

Under the requirements of the Army Regulations, every officer of the Army makes an individual report of service on the 30th of June of each year, giving, in addition to the enumeration of purely military duties performed, information on the following subjects, viz: Professional or scientific study or investigation; foreign languages; special knowledge of a particular line of work; business experience, and books written or published or essays and lectures prepared.

Efficiency reports are also made at the end of each fiscal year by commanders of departments, chiefs of staff bureaus, and commanding officers of posts, etc., for every officer under their immediate control and supervision. Extracts of inspection reports containing specially favorable or unfavorable mention of an officer are made and filed with his individual report, and, in like manner, extracts are made from all reports of actions, engagements, etc., in which an officer has been engaged.

It will be seen, therefore, that efficiency reports of officers afford the Secretary of War the fullest possible information respecting all officers and enables him to form a true estimate of the standing, ability, and special fitness of every officer of the Army for any military duty. The new system made necessary to fully carry out the intention of the law of March 2, 1899, results in too much delay in filling vacancies—two now existing in the Adjutant-General's Office and one in the Inspector-General's Office—without adding to the information that may be desired by the War Department in any one case. The repeal of section 6 of the act quoted above is therefore recommended.

Under existing conditions it will require on the average six months to fill a vacancy in either department.

### WAR COLLEGE.

The board of officers appointed by direction of the Secretary of War, for the consideration of proper regulations, with a view to the establishment of a war college for the Army has not yet formulated its conclusions on this important subject. The purpose of the Department in establishing this college is to further the higher instruction of the Army; to develop and organize, in accordance with a coherent and unified system, the existing means of professional education and training, and to serve as a coordinated and authoritative agency of this office through which all means of professional military information shall be, at all times at the disposal of the War Department.

## COLLEGE DETAILS.

The continued exigencies of the military service during the past year has made it inadvisable, if not absolutely impossible, to make any college details from the officers on the active list. Requests for such details have, however, been complied with in part by the assignment to that duty of officers on the retired list of the Army.

## RETIRED LIST FOR OFFICERS.

The recommendation of last year that officers of the Army be placed on the same footing as to retirement as is provided for officers of the Navy by the act of March 3, 1899, increasing the efficiency of the personnel of the Navy, is renewed. Under the provisions of section 9 of this act officers of the Navy involuntarily retired are given the rank and receive three-fourths of the pay of the next higher grade.

Officers of the Army and Navy, sharing, as they do, the dangers and hardships of their professions, are equally entitled to the same benefit of retirement on increased rank under like conditions, and the extended benefit to the Army should take effect from the passage of the law above quoted, and officers of the Army retired since the passage of that act. namely, March 3, 1899, should have the full benefit of its provisions, This is urged solely on the ground of absolute justice.

## PROMOTION FROM THE RANKS.

The act of June 18, 1878, provided for the promotion to the grade of commissioned officer of meritorious noncommissioned officers who should be found morally, intellectually, and physically qualified for promotion, and the act of July 30, 1892, extended to all unmarried soldiers under 30 years of age and possessing the requisite qualifications the privilege of competing at prescribed examinations for commissions in the Army. That this last law has operated well in attracting to the ranks a superior class of intelligent and educated young men is evidenced by the yearly increasing number of men who have obtained admission into the commissioned branch of the Army, as shown in the subjoined table:

| | 1893. | 1894. | 1895. | 1896. | 1897. | 1898. | 1899. | 1900. | Total. |
|---|---|---|---|---|---|---|---|---|---|
| Cavalry | ........ | 1 | ........ | 2 | ........ | 1 | 12 | 5 | 21 |
| Artillery | ........ | ........ | ........ | ........ | ........ | 15 | ........ | ........ | 15 |
| Infantry | 6 | 12 | 3 | 8 | 22 | 33 | 41 | 58 | 183 |
| Total | 6 | 13 | 3 | 10 | 22 | 49 | 53 | 63 | 219 |

But, experience has shown that two years is too brief a period in which enlisted men can fit themselves for the important duties of commissioned officers. It is only little less than travesty to say that a man can qualify as an officer, by serving as an enlisted man, in one-half the time required for a cadet to complete his course at West Point. It is recommended that the law be amended to read four years instead of two. This will put appointments from the ranks and the Military Academy on the same footing.

To illustrate, two young men of say 21 years of age enter the service, one going to the Military Academy and the other enlists, the man from the ranks gets his commission in two years and the cadet not until four years, so that the enlisted man becomes the senior by two years and will so remain throughout their entire service.

### POST EXCHANGES.

The operation of the post exchanges during the past year, despite the attacks of the opposition outside of the Army, which have been persistent and unremitting, has been especially gratifying. Every complaint of specific violations of the regulations, or of excesses and abuses, have been promptly and impartially investigated and in every instance found to have been unwarranted.

Reports from the Philippine Islands indicate that the post exchange has become an absolute necessity, our troops being scattered at something over 400 stations, at small towns and villages, where it is quite impossible to purchase anything beyond the ordinary necessities of life; that the sale of beer in these exchanges has prevented the soldiers from drinking the vile native concoctions known as "anisado" and "bino," or "vino," which in the early days of our occupation presented a very serious problem to the military authorities, is proven by abundant testimony.

Similar reports have been received from Cuba, where the conditions are very much like those in the Philippine Islands; several officers, including General Lee, having reported that drunkenness has almost entirely disappeared since the sale of beer has been permitted in their commands. The chief surgeon at Santiago de Cuba reports that after the troops were scattered, owing to the outbreak of yellow fever in 1899, canteens were discontinued at many posts in eastern Cuba, but that alcoholism and malarial and intestinal troubles increased to an alarming extent, the latter almost fourfold at some posts, and as the increase could not be traced to the food or water, the surgeons attributed it to rum, which is easily procured at very slight cost in that section; that canteens were then opened, and the subsidence of these troubles was as remarkable as their rise (in one post, in one month, intestinal troubles decreased 80 per cent). He therefore believes that to close the canteen in that country, without first closing all possible avenues for the procuring of rum within a radius of 10 miles, would be sanitary suicide, and "from practical observations is led to the conclusion that the closing of the post canteen in Cuba would be an unjustifiable as well as a dangerous experiment."

What has been said of Cuba is equally applicable to Porto Rico. The inspector-general of that department, in his annual report for 1900, remarks as follows:

> Here we find exceptional conditions, all tending in a marked degree to drag the soldier down to a lower social place than any of our Army has ever known before. With native rum at 2 or 3 cents per drink, and the cheap complacency of the degraded female attendants in the saloons which abound near every garrison, it is easy to discern the causes to which so many cases of drunkenness and other disorders are attributable. Because of the absence of suitable recreative resorts when off duty and the wide gulf which a foreign language has placed between them and the

better classes of the people, the men are forced to seek diversion among the lower elements. I understand that efforts will be renewed at the next session of Congress to prohibit the sale of beer in post canteens, and I therefore beg to record the conviction that, so far as garrisons in the islands are concerned, such legislation would be ill advised.

The commanding officer of the Department of Texas has brought to the attention of the Department a new feature of the exchange system, which he thinks successfully solves a problem which has been a source of more or less trouble in the Army namely—the washing of the clothing of enlisted men. It has been difficult to hold men to a strict accountability for their appearance at inspections. The plea that their washerwoman had failed to get their clothes done in time has to be accepted, when proven true, and the woman is always beyond discipline. Moreover, each pay day brings the annoyance of solicitation by washerwomen for pay claimed to be due them from the men, and as a matter of fact enlisted men at most of the posts of the Army have to pay from $2.50 to $4 a month to laundresses, and in the summer time especially, when they are required to wear khaki uniforms and white trousers, the expense for their washing is a burden on their small pay.

As an experiment the post exchange at Fort Ringgold, Tex., started a laundry, with the wife of an enlisted man as manager, and has discovered after a few months' operation that, calculating all expenses, it is able to do all the laundry work for the garrison at an expense of $1 per man for all months excepting June, July, August, and September, for which months it can be done for $1.25 per man, as well as to deliver the clean clothing to the men on Friday afternoons, so as to enable all to present a neat appearance at the Saturday inspection. It is entirely optional with the men as to whether or not they shall patronize the laundry, but obviously the small expense presents an inducement that few of them resist. The result of this experiment has been communicated to the Army, and its successful installation at the larger military posts may be anticipated.

During the year ending June 30, 1900, the aggregate receipts of the exchanges in operation in the Army, so far as reports have been received, amounted to $1,845,927.55, and there was received as money on deposit $69,934.82, making the total amount of money received $1,915,862.37. There was expended for merchandise purchased, rents, fixtures, and repairs, and expenses of operation $1,381,423.23, which, less deposits, gives a profit of $464,504.32. From this amount there was donated to the funds of the several regimental bands $10,363.84; to the maintenance of post gardens, $1,362.82; to post libraries, $1,476.57, to gymnasiums, $7,008.63; as prizes for the encouragement of athletic sports, $3,653.52; and after setting aside the sum of $159,199.47 as a reserve fund to meet anticipated expenses for at least one month there was passed to the credit of the companies and mess funds for the benefit of the soldiers, in the form of dividends, the sum of $293,301.28. The net value of these exchanges—that is to say, the balance of their combined assets over their liabilities—was on June 30, 1900, $326,068.01.

## THE RECRUITING SERVICE.

*Regular Army.*—In October, 1899, there were sixty regular recruiting stations of the general service in large cities. The number of such stations has varied but little during the year, some being closed as they became unproductive and others opened in different localities; the number now in operation is 62. In several instances one officer conducts two such stations. Again, many of the recruiting officers stationed in these cities visit and conduct temporary stations also, thus canvassing the sections surrounding their main stations. In this way over one hundred and sixty temporary stations have been in operation for a longer or shorter time during the year, the average number in operation at a time being about forty (not counting places canvassed by volunteer recruiting officers, under the direction of general recruiting officers, during October, 1899).

The only special regimental recruiting party that was out October 1, 1899, was recalled during that month. The large number of regiments serving abroad, in whole or in part, renders special regimental recruiting for the time impracticable.

The general recruiting detail was changed in December, 1899, to consist of one officer from each regiment, the officers being nominated by their regimental commanders, thus affording an opportunity for home service to a number of officers who had been in active field service during the period of hostilities.

Temporary details have been made as necessary of officers belonging to depot battalions stationed within the United States to recruit for their own battalions, as well as for the general service.

In October, 1899, the enlisted strength of the Regular Army was about 6,400 below the authorized maximum, and active measures have been continued throughout the year to supply this deficiency and meet current losses.

A special feature during the year has been the recruiting of depot battalions, designated in accordance with General Orders No., 153, August 21, 1899, from this office, with a view to preparing a trained body of men for foreign service as they might be needed.

Under existing conditions the home or depot battalion offers the best means of recruitment of depleted regiments, and at the same time offers by way of station about the only relief possible to give the officers a tour of duty at home, the plan being that the home battalion shall remain on recruiting service and instruction for one year. This plan, fully carried out, will give the officers one year at home and two years of active service.

Constant efforts have been made to obtain suitable men for the artillery, both light and heavy. Instructions have been given to recruiting officers to exercise great care to accept only such men for the artillery as meet the special requirements of that arm. During the year upward of sixty batteries have been brought at times to their maximum strength.

Special efforts have also been directed in filling regiments when designated for service in the Philippines or China, as well as to providing men for vacancies occurring in regiments already in the Orient, and in Cuba and Porto Rico.

All organizations sailing for the Orient have been filled with recruits prior to their departure from the United States, the number of recruits thus supplied between July 1 and September 20, 1900, to regiments about to sail as indicated being 1,452. Between September 20, 1899, and September 20, 1900, 3,951 recruits were forwarded to regiments already in the Philippines or China, while on the latter date there were 1,826 recruits at different rendezvous in the United States undergoing instruction and awaiting the sailing of transports. During the same yearly period 1,212 recruits were forwarded to Cuba, and 375 to Porto Rico for regiments serving therein. There were also 255 recruits at rendezvous in the United States on September 20, 1900, for regiments in Cuba and Porto Rico.

In addition to the recruits thus supplied transfers were made in April and May, 1900, of 485 men from depot battalions in the United States to active battalions in Cuba, the vacancies thus created in the depot battalions being speedily filled, with a view to another draft for foreign service.

The total number of enlistments and reenlistments in the Regular Army during the fiscal year ending June 30, 1900, exclusive of the Hospital Corps, was 19,549, classified as follows:

| | |
|---|---|
| For the general service | 18,929 |
| For the special recruiting service | 88 |
| For staff departments | 532 |
| Total | 19,549 |

Of the 19,549 accepted applicants, 16,548 were native born and 3,001 of foreign birth; 18,649 were white, 870 colored, and 30 Indians. The enlistments numbered 15,588 and the reenlistments 3,961. Excluding reenlistments, the percentage of native born among the original enlistments was 88¼. The report show that the recruiting officers making the 19,017 enlistments embraced in the first two items of foregoing list rejected 69,694 applicants—about 78 per cent of the number seeking enlistment—as lacking in either legal, mental, moral, or physical qualifications; 987 of these were rejected as aliens, and 2,038 for illiteracy.

The total number of enlistments and reenlistments for the Hospital Corps during the fiscal year was 1,762, of which number 1,463 were native born and 299 of foreign birth; 1,686 were white and 76 colored. The enlistments numbered 1,349 and the reenlistments 413.

Including the Hospital Corps, the aggregate of all enlistments and reenlistments for the Regular Army during the fiscal year ending June 30, 1900, was 21,311.

*United States Volunteers.*—The last one of the twenty-five regiments of United States Volunteers left the rendezvous where it was organized November 15, 1899, en route to Manila. Recruiting in the United States for the volunteer regiments practically ceased in the latter part of October of that year, a few enlistments only being made thereafter to fill vacancies caused by disability, etc., prior to the sailing of regiments for the Philippines.

The number of volunteers enlisted for the twenty-five regiments since September 20, 1899, is 8,432, of whom 169 were enlisted in the Philippines, these latter being generally a special class of men, such as musicians, cooks, etc.

*Porto Rico Regiment, U. S. Volunteers.*—In February, 1900, the President authorized the organization of a mounted battalion of Porto Rican troops, to form with the infantry battalion already organized a Porto Rico regiment of native troops. The number of enlistments made for this regiment since September 20, 1899, to fill the mounted battalion and complete the recruitment of the infantry battalion, is 542.

## GOVERNMENT HOSPITAL FOR THE INSANE.

The following were committed to the Government Hospital for the Insane under the order of the Secretary of War from September 1, 1899, to September 1, 1900:

| | |
|---|---|
| Officer of the United States Army | 1 |
| Officer of the United States Army (retired) | 1 |
| Officer of the United States Volunteers | 1 |
| Enlisted men of the United States Army | 110 |
| Enlisted men of the United States Army (retired) | 5 |
| Enlisted men of the United States Volunteers | 27 |
| Late soldiers of the United States Army | 4 |
| Civilian employees of the Army | 2 |
| Total | 151 |

## THE ADJUTANT-GENERAL'S OFFICE.

With the addition of two chiefs of divisions, authorized by the act of April 17, 1900, the legal organization of the regular force of this office remains unchanged, and the temporary force has been continued. The conditions which have made the employment of temporary clerks necessary still exist and the volume of business taxes the energies of the entire clerical force, laboring as it does, and has done during the past two years, under the serious disadvantage of overcrowded rooms. This disadvantage is emphasized by the statement that the Adjutant-General's Office—the important bureau of correspondence and orders—occupies rooms located on five different floors either in the north, west, or center wings. While the State, War, and Navy building is generally assumed, from its size, to be capable of comfortably accommodating the three Executive Departments located therein, in point of fact it utterly fails to do so, and, unless provision is made by Congress for the renting of additional outside buildings for the accommodation of some of the minor bureaus, the present unfavorable conditions must speedily become worse, if not positively dangerous, as the weight of the files and papers that are required in the several bureaus for the prompt and correct conduct of business will soon exceed the safety load that can be placed on the floors of this building; indeed, in some of the rooms allotted to this office that weight has already, and unavoidably, been exceeded.

In justice to those clerks of the temporary force who during the past two years have demonstrated their efficiency and capacity for high-class work, it is earnestly hoped that means may be devised that will permit their transfer to the regular roll on the happening of vacancies therein, either by granting them a special examination or by authorizing their names to be placed on the Civil Service Commission register of eligibles, on the recommendation of the head of the bureau in which they are employed, approved by the Secretary of War.

The recommendation is renewed that the law governing leave of absence be amended so as to make the annual leave cumulative, not to exceed ninety days, that valued clerks whose devotion to duty prevents their availing themselves of the annual leave in any calendar year may be able at a future time to obtain a lengthened leave for rest or recreation without loss of pay.

To the officers on duty in this office—Col. Thomas Ward, Lieut. Col. William H. Carter, Majors George Andrews, John A. Johnston, William A. Simpson, assistant adjutants-general, and Capt. Edwin A. Root, Tenth Infantry—acknowledgment of faithful and efficient service is made.

Respectfully submitted.

H. C. CORBIN,
*Adjutant-General.*

The SECRETARY OF WAR.

---

[1] On the lines of the general officers and staff corps, in the column under the heading, "Strength at muster in," the total number appointed or enlisted is shown, and in the column under the heading, "Strength at muster out," the number remaining in service November 30, 1899, is stated.

[2] From this total should be deducted the number of officers and enlisted men accounted for under the headings, "Promoted" or "Transferred," as they were promoted or transferred in their own regiments, or to other organization in the volunteer service, therefore being no loss; also 453 officers of the Regular Army who held commissions in the volunteers.

[3] From this total should be deducted 891, this number having been appointed to be commissioned officers, and so accounted for.

[4] Includes 4 Regular Army officers holding volunteer commissions.

*the war with Spain, with losses from all causes, etc., as shown by muster-out rolls*—Cont'd.

ADJUTANT-GENERAL'S OFFICE,
*Washington, D. C., October 1, 1900.*

# REPORT OF THE INSPECTOR-GENERAL TO THE SECRETARY OF WAR.

# REPORT

OF THE

# INSPECTOR-GENERAL OF THE ARMY.

War Department, Inspector-General's Office,
*Washington, D. C., September 29, 1900.*

Sir: I have the honor to submit the following report of the operations of this department during the past year, in addition to the matters relating to discipline, etc., which have been submitted to the Lieutenant-General Commanding the Army, under General Orders No. 28, H. Q. A., 1876.

The magnitude and importance of the work performed during the year and the benefits and economy effected by it may be better appreciated if both branches of work are considered together. But when the inspections of money and articles are measured by the million and still are not too fully appreciated by those who do not have the work to do, it may be due to those who bear its burden to invite some attention to it for the very work's sake. That these gentlemen have done the State some service of this modest sort without attracting much attention may be illustrated by the successive months of arduous and skillful work by the accountant of this Bureau, Mr. Wm. T. Kent, in the Antilles; first in Porto Rico under Colonel Heyl and by the request of General Davis, where financial matters were taken in time and have proceeded creditably and regularly, and then in Cuba after the climax and publicity were reached and the effort to restore regularity was in progress. And what others, both commissioned and civilian officials, have done is well worthy of individual mention: and considerate attention is, with some hesitation, invited to not only the volume, but the intelligent faithfulness and the not unimportant success of their work.

Since the rendition of the last annual report the military establishment has undergone important changes. Perhaps no two battles in one year ever had so much effect upon the history and destiny of our country as those of Manila and Santiago in May and July, 1898. The last of the State volunteer troops who did such excellent service in the Philippines and elsewhere, and whose military experience and the results flowing from it promise so great an influence upon our national history, were returned to this country and mustered out; and their places were filled by the new United States volunteer regiments, which were organized under the act of March 2, 1899, and comprise 1 regiment of cavalry, 24 regiments of infantry, 1 Porto Rican regiment, and 1 squadron of Philippine cavalry, numbering in all about 35,000 men. Two of the infantry regiments and the regiment and squadron of cavalry were organized in the Philippines, all from Americans, except the squadron of cavalry and some scouts from natives. The Porto Rican regiment was organized in Porto Rico, also from the natives. And the remaining 22 regiments were organized in the United States, 2 (the Forty-eighth and Forty-ninth) being composed of colored men; and all, except the Porto Rican troops, have served in the Philippine Islands, the first (Thirty-fourth) arriving at Manila October 11, 1899, and the last (Forty-eighth) January 25, 1900.

Conditions in Cuba and our new possessions have become more settled; but occurrences in China caused new complications and required a large force, some from the United States and some from the Philippines, to be transferred to Chinese soil. And the gallant work against the Boxers and the rescue of beleagured legations and the conduct of the command under General Chaffee (who was formerly on duty with the Inspector-General's Department) are too recent to need more than mention here, except to share the sorrow of all for our fallen comrades and in bestowing hearty commendation by all for such soldierly conduct.

In the Inspector-General's Department the year is marked by unusual activity. The inspections of disbursements and deposits amounted to over $280,000,000, of property to over $10,000,000, with over $1,000,000 saved for further service, and of over 130,000 men. And in addition to the usual inspections of military posts, supply depots, arsenals, armories, recruiting stations, hospitals, national cemeteries, and Soldiers' Homes, it may be proper to mention the inspection of the United States volunteer regiments before leaving this country, the organization of a systematic general inspection service of transports, the inspection of West Point from this office, and the resumption of inspections of military institutions having army details and United States arms and equipments. With inspections from the arctic to the southern tropic zones and from Porto Rico to the Philippines the length and breadth of the land and water involved has changed like a transformation. In our annual work rather beyond the ordinary routine duty the year is also marked by a disclosure, by Colonel Burton, the inspector-general of the Division of Cuba, of the Cuban postal frauds, which is the only one reported during the year and not immediately made good. But most impressive of all to us is our loss in the premature death, December 19, 1899, on the battlefield of the gallant Lawton, who was an officer of this corps, and in the death of Lieutenant-Colonel Miley, inspector-general of volunteers, who died September 19, 1899, while performing double duty as chief inspector-general of that command and also as collector of customs of the port of Manila, whose death was noted in last year's report, and in the death of Major Edmunds, June 18, 1900, who was serving in this department when he succumbed to yellow fever. We can not disregard our personal loss nor the quality of such worthy soldiers as these. But even to strangers a loss of over 10 per cent of the corps by death during the last fiscal year may attract attention to services which surely have not been performed in any perfunctory spirit, and it is hoped may be appreciated by our superiors and our fellow-countrymen.

The detailed reports of the inspections made from time to time have been brought to the attention of the proper authorities, and the commendations mentioned by the inspectors have been repeated upon the records, and the criticisms of the inspectors and the defects disclosed have generally received prompt remedial action wherever possible; and everything assigned to this department has received faithful and thorough attention, and the results accomplished indicate continued efficiency and generally economic administration. How very much encouraged and less hampered inspection work has been during this fiscal year goes without saying and is most encouraging.

### BRIGADE INSPECTORS-GENERAL.

The experience gained in the organization and mobilization of the volunteers during the Spanish war has again developed the fact that an inspector-general for each brigade would have been of immense benefit to the Army, and a provision in the law to that effect is desirable. General Lawton acted as inspector-general of brigade during the civil war; so, recognizing its benefits, it is not surprising that he instituted a similar system in his division during recent military operations. Even in peace times our brigadier-generals habitually have inspectors-general assigned to their staff.

In addition to the inspection of disbursements, property, and places for the information of higher authority, it is also the special duty of the corps of inspectors-general to obtain direct knowledge of the individual soldiers and organizations and their equipment, and note their deficiencies or excellence and aid their supply. It can hardly be generally believed that any unnecessary discomfort or suffering of the men will be equally well guarded against and their wants equally promptly provided for without well-directed inspections. "A chiel among ye taking notes" has its uses, though always so kindly disposed.

The act for increasing the efficiency of the Army approved March 2, 1899, gives a certain amount of elasticity in providing for general officers—a major-general for 12,000 troops and a brigadier-general for each 4,000; but only a fixed number, and that inadequate, of inspectors-general was allowed to meet all the contingencies of the expanding organization, thus rendering it almost impossible for each command to have its full complement of competent officers to superintend the work at every stage. A niggardly supply of capable officers for every essential duty in war is a "penny-wise and pound-foolish" policy, and resulted, as necessity knows no law, in the regiments suffering in more ways than one. Nor is it held to be wholly wise to have ours the only army unprovided with suitable rank for any command larger than 20,000 men in the field.

As the company, battery, or troop is the unit of the battalion and regimental organization, so the brigade becomes the unit for the organization of a division or corps; and the corps is the tactical unit for separate armies. And in the earlier or formative stages the companies should have present for duty their full allowance of officers to have charge of all the details of raising, organizing, equipping, disciplining, and instructing the raw levies; while each brigade, especially in the incipient stages, should have a full complement of staff officers, particularly inspectors-general, to aid in the thousand and one things necessary to be done and also to advise, instruct, or direct the inexperienced and zealous, and to insure immediately that supplies and transportation, orderliness, cleanliness, hygiene, cooking arrangements, camping places, drill grounds, guard duty, and every military exercise and practice, from musketry to surprising a fortification, are all right. If his commanding officer wishes his inspector to have much or nothing to do with any or all of these things, so be it. He is simply on hand for the military duties desired of him; and in this drama his part is eldom ill played, but when it is omitted there is the mischief to play.

The need of brigade inspectors-general has been clearly recognized by those best able to appreciate their necessity in every military emergency since the foundation of the Government till now. They were adopted under Washington, as well as under Lee and Lawton. Doubtless the necessity can sometimes be met by the temporary detail of other officers to do the work; but they should be provided for by law, so that the evils of depleting the commands of its necessary officers can be avoided. And the necessity for experienced and capable inspectors of adequate rank for army corps and separate armies can be pressed upon similar grounds. And experience in other branches of business does not necessarily produce an efficient inspector; he should be experienced and found efficient in inspection duty.

It may be well to repeat that in the Seventh Army Corps, commanded by Gen. Fitzhugh Lee, one of the most completely organized corps which went to Cuba, brigade inspectors-general were detailed upon the staffs of the brigade commanders with most excellent results; and when General Lawton, an experienced inspector-general himself, assumed command of the Second Division of the Eighth Army Corps in the Philippine Islands, he detailed inspectors-general for each brigade, and no doubt much of the splendid efficiency of that division in the subsequent campaigns was due to those thorough inspections. At the other extreme, as there is no law authorizing any inspector-general for a separate army, but one was actually performing the duty at army headquarters, ought one of the corps commanders to try to order this inspector-general to report to him? The attempt may appear quaint, but so is the law. There is a smell of lamps rather than of field service about some of them in former days. But of course this is so no longer, for we can not desire the Army to be ridden, much less overridden, by green baize desks; and legislation well considered by a board of general officers, accustomed to command in presence of the enemy, had better be the basis of our organization and military methods.

## LEGISLATION.

The legislative needs of the Inspector-General's Department with a view to increase its efficiency may be set forth in a special communication: but it may be well, in connection with any proposed legislation, to invite attention to House Report No. 74, Forty-second Congress, third session, and to the opinions then held by prominent army officers, which appeal with equal force to existing conditions, and from which the following extracts are submitted:

[Report of Committee on Military Affairs.]

The consolidation of the Inspector's with the Adjutant-General's Department, though advocated by a few, has met with general disfavor. Their duties are but slightly akin, and the independence of the inspectors from all other branches of the line and staff can only be secured by a complete separation from them. The duties of the Adjutant-General confine him closely to his post, to his record, and to the promulgation of orders. Those of the inspector carry him over a wide field and lead him to a thorough knowledge of the entire administration of army affairs, in camps, in the field, on the march, as to its police, drill, discipline, and spirit, as well as supplies, arms, and health. An excellent adjutant might be a poor inspector, while an excellent inspector could not fail to be a good adjutant. Would it not be better that these departments should be combined, and thus add to the efficiency of the Adjutant-General's Department by placing within its reach a complete view of the whole management of the Army? With adjutants-general of such qualifications the burdens of commanders would be very greatly lightened and their efficiency increased.

Perhaps a sufficient reason for keeping these departments separate is found in the fact that the Inspector-General's Department is quite small, embracing but a few officers, and that the Adjutant-General's Department should be inspected by a separate and independent one. An important improvement in the system might be made by clothing inspectors with discretionary powers to issue orders in the name of the commander for the correction of evils discovered. The powers of inspectors in this regard should be coequal with those of adjutant-general, and it is believed there could be no possible conflict of authority or clashing under such a system.

[Maj. Gen. W. B. Franklin.]

There is, in my opinion, nothing objectionable to the consolidation of the Adjutant-General's and Inspector-General's departments, provided the inspections are rigidly kept up. The danger is that the whole corps would, in case of consolidation, become an adjutant-general's corps instead of a combined corps, because the duties of an inspector-general are much more disagreeable than those of an adjutant-general. Nothing is more conducive to the discipline of the Army than a system of inspection which shall be frequent, and searching, and rigid. An inspector should belong to each department staff and make his reports not only to the department commander, but to the chief of his corps in Washington, and he should be obliged to make his tours a specified number of times each year. Inspectors should also be sent on tours from Washington (unaccompanied by their commanding officers) under direct orders from the Secretary of War or the General of the Army, and should inspect everything from department headquarters down.

[Brig. Gen. E. D. Townsend, Adjutant-General of the Army.]

The duties of officers of the Adjutant-General's Department and of inspectors-general are entirely different, and nothing could be gained by consolidating them. Both duties can not be done at one time by the same officer, because inspection involves traveling away from the headquarters, where adjutant-general's duties must be done. If the two officers take turn about in their two separate lines, responsibility is most apt to be weakened and interest relaxed in one or both. Mercantile life will illustrate this position. A judicious merchant will not confide his books one month to one clerk and the next to another, lest if mistakes occur the responsibility drop between the two instead of falling upon the right one. Nor is the responsibility of officers of the Adjutant-General's Department imaginary. They have charge of and are accountable to the Secretary of War for records of the highest importance, which will eventually be brought to Washington as part of the nation's archives; and not even the department commander himself can interfere with that accountability.

[Maj. Gen. J. B. Fry.]

In my opinion there are no staff departments in the Army the consolidation of which would result advantageously to the service and country. To "consolidate" would be to take a step backward, only sooner or later to retrace it. The division of labor and pursuit of specialties are in conformity with a natural law, the growing operation of which marks this as an age of improvement. Proof of the force of this law is to be found in the history of the progress made of late years in every branch of science and business and in every profession and trade. The present staff organization of the Army is the result of the operation of this law in our military system. I have no more doubt that officers are "more efficient who are educated, trained, and promoted for specialties of the service" than I have that a patent lawyer is more efficient in a patent suit than a criminal or admiralty lawyer. Though it may be true that the legislation fixing our present staff system has been influenced in a few instances by personal considerations, it is a fact that this system is well adapted to our service and has the special merit of being, in the main, the result of our own experience and necessities. It is therefore far more valuable to us than the systems of other countries could be, which systems, so far as we are concerned, are mere theories. The division of labor under it is about as near the natural and proper one as we can get without further experience. Both in peace and war it has proved eminently successful for our purposes. Being the natural and proper division, it would have to come into operation sooner or later under any circumstances. Consolidation would only retard it and impair its usefulness. Feeble and irresponsible bureaus of a consolidated corps would replace the efficient and responsible departments of the present system. To reap in full the advantages which, in my judgment, inevitably follow the pursuit of specialties in the military service, these specialties should be honorable and distinctly individualized. With us they are more so now than they would be in case of consolidation.

[Brig. Gen. (Bvt.) T. M. Vincent.]

The Adjutant-General's Department could not be advantageously consolidated with the Inspector-General's.

The Adjutant-General's Department was formed for the purpose of providing and specially instructing a body of officers for the efficient discharge of the functions of chiefs and subchiefs of staff, to armies, military geographical divisions and departments, army corps, etc. Its value and necessity will be admitted if, in connection with a study of the duties properly attaching to it, we consider that its science is that of the general in chief and that there is no difference, except in degree, in the duties of a chief of staff to an army, army corps, division, or other command. Its officers may be, and are, summoned on staff duty in the war office, under the Secretary of War. While so employed their duties are administrative.

The influence its reports, and information from the records with which it is charged, may have upon the decisions of the Secretary of War, General of the Army, and other commanders, and committees of Congress make it necessary for the officers to have had a special education and to possess peculiar skill and ability. It necessarily has much to do with all the varied records of the war office, Army, and other headquarters, relating not only to the personnel and matériel of the service. The records referred to are a consequence of the Articles of War and special laws.

The duties of an officer of the Inspector-General's Department also require special and peculiar qualifications, but of a kind marked by distinctive features, the officers having to do with the inspection of the Army through every department and branch of service, and of all matters relating to its operations, embracing all fiscal concerns, discipline, and police. It is the great balance wheel of the military establishment. Its operations, therefore, extend over the Adjutant-General's Department, and for that reason, if none other, it should be independent of it; for, as its reports are with the view of correcting abuses and defects and for the advice (often confidential) of the Secretary of War and General of the Army, it would not be so likely to report on or correct abuses in its own organization, which it would be a duty to do were the two existing departments made one.

The offices of Adjutant-General and Inspector-General were, in 1775, separate; in 1796, combined; in 1798, separate; but there were assistant inspectors who were also deputy adjutants-general; in 1802, combined under the title of "Adjutant and Inspector of the Army;" in 1812, separate, and in 1813 combined. At reorganization in 1815 (when the Army ceased to be provisional in its character) the offices were not recognized by law, but in 1816 they were, and combined, so remaining until 1821, when they were finally separated.

By the act of July 5, 1838, assistant adjutants-general are made in addition to their own duties to perform those of assistant inspectors-general, when the convenience of the service requires it.

An army is efficient in proportion as its staff is well organized, and the members composing it honest, industrious, and intelligent. It will be of little avail if the individual regiments, battalions, or corps which compose an army are in a high state of discipline and well organized if the general staff which directs the whole is incompetent to fulfill its important functions. Such an army, however patriotic and gallant, would soon have to submit to one of equal, nay, of less number of troops of inferior quality under the guidance of a staff well organized, and composed of officers of experience and well versed in their various and complicated duties; for while the troops of the former description would be daily diminishing in strength and discipline under an ill-regulated and ignorant staff, the latter would be improving in force and discipline by the good management and care of its excellent staff. It is not the individual exertions of corps, however spirited, that decide a campaign; it is the talent with which they are directed as a whole, and the means employed to maintain discipline, to provide for their comfort and subsistence, and the numerous supplies requisite for carrying on the war. * * * The staff must be complete in time of war or the troops will never become efficient, but will be an irregular and expensive corps on which no reliance could be placed. It is the staff alone that can give efficiency to the service by a proper attention to the necessary supplies, organization, discipline, and accountability of all the departments of the service, regular as well as irregular. The general officers and staff officers should be selected with great care, for on them depends the successful employment of the troops and the general defense of the country. They should all be men of character, talents, and experience, in whom the nation and the Army could confide, and not those who from popular favor may for the moment have been brought into view and who in the first reverse will lose the confidence of the Army and the people.

The staff of the United States Army, the organization of which must depend upon the character of our country, "should be so organized in peace as to be capable of being extended in time of war to all the circumstances which may grow out of the exigencies of a state of war, while the principles of its organization should be unchanged thereby. It would therefore be proper that, although in time of peace acting on a miniature scale, it should be susceptible of being enlarged and extending its rules and regulations to any number of forces, however large or small, united or detached. Hence in time of peace all the regulations for the government of the staff and of every arm of the service should be settled and acted upon in order that the practice might the more readily obtain in time of war and be introduced among the new troops and the militia without difficulty or embarrassment." The requirements as enumerated can not be secured without permanency in staff positions.

[Maj. Gen. (Bvt.) W. D. Whipple.]

The Adjutant and Inspector-General's departments could not be consolidated advantageously for the reason that the duties of the two departments are entirely dissimilar. An assistant adjutant-general is by his duties required to remain at headquarters and attend to the transaction of the daily business under the direction of the commanding general, while an inspector should be occupied during the most of his time in traveling about inspecting troops and posts.

### CLERKS FOR OUTSIDE INSPECTORS-GENERAL.

The necessity for the most efficient clerical assistance to officers of this department has been recognized by all my distinguished predecessors; and the reports of Generals Marcy, Sacket, Davis, and Baird show that even in their time discrimination seemed to be made against inspecting officers in this respect, and that they repeatedly urged appropriate legislation to remedy this defect. Those who have not experienced it may not fully appreciate what a trial it has often been; and the injury it does the service has not been insignificant. The need of more and suitable clerks has probably been admitted always; perhaps even the supply departments and adjutants feel it sometimes. A good number of soldierly tempered and capable clerks is a boon even in the field. My own experience both when inspecting and when in command of Camp George H. Thomas illustrated this fully. And I see that General Bates and others there have mentioned it in the field. And now that the duties of the inspectors-general have been so greatly extended and been made, if possible, more delicate and exacting by the examination of every variety of accounts, in addition to their former specially military duties, it becomes more and more incumbent that the clerk shall be efficient, authorized, and interested, and that his position be dignified to the utmost as one of responsibility, permanence, and trust. Whose clerk is the inspector to rely upon when on such sensitive duty? Evidently it should be upon his own, if fair consideration and similar treatment can be extended to him as is shown the disbursing officers he inspects. In comparing vouchers with check stubs, for instance, more than one pair of eyes is essential.

The character of the duties of an inspector are more or less of a confidential nature, and his assistant should be one in whose discretion as well as ability he can rely. A clerk as well as an officer becomes valuable as his experience ripens and his own personal interests are wrapped up in any special vocation. At the stopping places where needed much valuable time is lost to an inspector who has to secure and educate a new clerk throughout every tour of inspection. It is believed that only the most favorable experiences under present methods have been entirely fair and justly considerate to both the duty to be performed and the clerks who perform it. Better things are hoped for and are easily given. As related to this department the present method seems at times a ludicrous and expensive as well as a questionable system. Evidently, then, the clerk should belong absolutely to the department to obtain the best service, and not be merely temporarily and insecurely attached, as they are now. The law under which clerks are assigned to duty with inspectors-general at the several department headquarters is contained in the act making appropriations for the support of the Army, and appropriates for "pay to clerks and messengers at department headquarters and headquarters of the Army," 3 clerks, at $1,800 each; 6 clerks, at $1,600 each; 21 clerks, at $1,400 each; 60, at $1,200 each, and 100, at $1,000 each; in all, 190 clerks. Naturally there are none of either of these two higher-priced grades allowed this department in the field, and but few of the third. It has proved a great worry, and relief is asked. Does not the honorable Secretary of War and the Congress believe that the inspection department should be given as capable and devoted personnel as the supply departments inspected and as fair consideration?

The extreme importance of having the clerical personnel of the Inspector-General's Department free from entanglement with any others and wholly to be relied upon by the officers with whom they serve can hardly be overestimated, especially if irregularities are to be best guarded against, and this result could be accomplished by placing them upon the same footing as clerks and messengers in the Pay Department of the Army.

It is therefore recommended that Congress be urged to insert in the next bill making appropriations for the support of the Army the following, viz:

> *Provided*, That hereafter each officer on duty in the Inspector-General's Department shall have one clerk and one messenger, and said clerks and messengers shall be appointed by the Secretary of War and receive the same pay and travel allowances as similar employees in the Pay Department of the Army.

### INSPECTORS-GENERAL OF MILITARY DIVISIONS.

The advantage and benefits to the service resulting from having an inspector-general of rank and experience and in recognized touch with the central Bureau placed in charge of the inspection work in the Military Divisions in our new possessions, and fully utilized by the generals commanding there, both in complete and thorough inspections and full and explicit reports, should be fully appreciated and secured. Soon after the assignment of Colonel Burton, though hardly in robust health, to the Division of Cuba, under the approval, direction, and support of the Division Commander a complete scheme of inspecting everything by the inspectors-general, including places, troops, property, and financial transactions, was put into operation, and the reports of these inspections came up through the department commanders to the headquarters of the Division, where they were carefully revised and the necessary action taken to remedy such defects as were under the control of the Division Commander and Military Governor, General Wood. One of the principal results accomplished was the discovery of the frauds in the postal affairs of the island, which was brought out by Colonel Burton's inspection of the accounts of the officers in charge of those funds. And a most thorough investigation of the fiscal affairs of the island was commenced by experts from the War and other Departments; and steps were taken to bring the guilty parties to trial, and stop irregularities, peculations, and thievery, and insure that affairs should be conducted with honesty, vigor, and economy. Only a part of these reports have been received in this Bureau, and you doubtless have complete information on the subject.

Similarly, under the support and direction of General MacArthur and General Otis (who while a field officer had seen service in the Inspector-General's Department), when Lieutenant-Colonel Garlington reported in the Division of the Philippines, occupied by over 50,000 troops, regular and volunteers, garrisoning more than 250 towns, and with monthly receipts from insular sources of about $7,000,000 (a little less than half of those of Cuba), a system of inspections was instituted with the happiest results, embracing everything from brigades to transports. The highly satisfactory manner in which all the duties assigned to the Army, whether military or civil, have been habitually met, is more than gratifying. The results can hardly be too highly commended. At present no officer of the Inspector-General's Department higher than the rank of major is on inspection duty in Asia; though the only public enemy is there. Lieutenant-Colonel Garlington served at those headquarters from November 23, 1899, to the last of April, 1900, when the precarious condition of his health compelled him to return to the United States and proceed to Europe upon sick leave.

### RANK AND RETIREMENT OF OFFICERS.

As a matter of simple justice it is earnestly recommended that the benefits of section 9 of the law of March 3, 1899, providing for the retirement of officers of the Navy, under certain conditions, with the rank and pay of the next higher grade, be extended to include officers of the Army. Most of our wars have been fought on land, and the services and results accomplished by the Army seem no less meritorious and attended with no less dangers than those of the Navy, and should therefore receive equal recognition. There would be a benefit to the morale of the service more than compensating for the trivial expense accompanying the consideration due these veterans of a great epoch. As far as this principle of giving an additional grade on retirement has been partially applied to certain retirements upon examination for promotion, it has proved beneficial to the service and the individual.

**Rank important.** The rank that was habitual in our Confederacy does not appear too great for our generals. If worthy of such commands and duties they are worthy of the rank properly pertaining to them; and should not wait till death for the fullest recognition of their services by their fellow-countrymen. Among those in whose career this corps felt special interest and cordial sympathy may be mentioned Lawton in the present war and Buford in the civil war. And to-day doubtless his superiors and those who serve with him appreciate the services of General Hughes under most trying circumstances, where his readiness and resolution and soldierly qualities placed him among the best. The scene in China, where our troops bore themselves so well—resolute in battle, enduring under hardships, and self-controlled amid havoc—led to making the commanding officer a major-general immediately, when he was still one of the juniors among the commanders in that international command. Our Navy fares better. The disadvantage imposed by inferior rank becomes the more prominent upon such occasions; and our country should not continually place herself at a disadvantage so unnecessarily. It may be well to note that the grade of brigadier-general is abolished in almost every army in Europe and is nearly as archaic as commodore afloat. And so it is in the higher grades that our service is most apt to suffer.

### COMPARISON IN NUMBER.

One of the most perplexing problems that is likely to engage the attention of the military authorities and Congress in the near future is the question of reorganizing the standing army on a just and proper basis. Under existing conditions, the Volunteer Army will be disbanded on July 1, 1901, and the Regular Army reduced to about 27,000. That this number will be hopelessly inadequate to garrison a hundred or more military posts in the United States, some seven or eight in Alaska, and an equal number in Porto Rico, and over two hundred and fifty in the Philippine and Hawaiian Islands, keep the regular posts and fortifications with their valuable armament and buildings in good condition, and preserve order among our Asiatic dependencies needs no argument; and the conditions confronting us and a due sense of economy imperatively demand a permanent increase in the regular military establishment, if the interests of the United States are not to suffer. And the experiences of the past two years have again illustrated how unstable is the security of a nation and how quick the step from profound peace to war and riot.

Some years ago one of our foremost generals advocated one soldier for every 1,000 of population—a most insignificant estimate compared with conditions in Europe. And recently the Hon. Charles F. Manderson, in his able address to the graduating class at the Military Academy, offered valuable statistics which seem to have an important bearing on fixing the strength of the Army on some such basis. If the President were further authorized to increase the Army on the basis of two soldiers per thousand of population for nine months in anticipation or preparation for war or in the transition stage when closing war, it would seem far more flexible, business-like, and economical than our past abrupt, haphazard, and makeshift style of legislation. This must be fairly evident to all who carefully consider the absolute requirements of such times, as to which this generation possesses some instructive experience. Will they not, before passing off the stage, place the proper legislation on the statute books to properly meet and close war without undue extravagance or unnecessary discomfort and deaths, but with timely and adequate preparation, especially well-trained reserves? Surely our Chief Magistrate can be trusted for a few months with sufficient men to safeguard the nation without sacrificing lives and treasure by haste in the first stages of war and hurried legislation then, when it is too late for the best results. The following is an extract from the address delivered by the Hon. Charles F. Manderson, president of the Board of Visitors, to the graduating class at the Military Academy, June 13, 1900:

> Armed resistance to legitimate sovereignty is on in the Philippines; war to the knife and the knife to the hilt is raging in South Africa; the marines and "Jackies" of the civilized powers are to-day in conflict with the "Boxers" in China, and the peace of Europe seems likely to be broken. Within the present year every European power, whether at peace or war (save Italy, suffering from poverty induced by an army already too large), has increased its war budget by millions of money and the number of its troops by thousands of men: France, 5,000; Germany, 33,000; Austria-Hungary, 10,000, and Great Britain, because of her South African trouble, 240,000.
>
> The Army of the United States after the civil war was reduced to 25,000, and so remained until the Spanish war. Under existing law it is to be composed of 65,000 regulars and 35,000 volunteers, the actual force at this time being 63,010 regulars and 31,856 volunteers. On July 1, 1901, all the latter are to be discharged and the Regular Army reduced to 27,415 men.
>
> When war comes it is usually the unexpected that happens. That wise and close observer, De Tocqueville, said: "War is an occurrence to which all nations are subject, democratic nations as well as all others, whatever taste they may have for peace." And I might accumulate quotations to an extent to produce satiety on the proposition that a wise nation will in peace prepare for war. * * *
>
> I have prepared three tables, which I will publish, showing the population and area of the great nations, the number of their armies in peace, and a comparative statement with the United States of the soldiers to the one thousand of population, also to the square mile of area, and the war budget of each when at peace. These tables furnish much food for thought and contain figures of fact that annihilate the figures of speech of those who would make "cowards of us all."

TABLE No. 1.—*Proportion of soldiers to population.*

| | Population. | Army in peace in 1899. | Number of soldiers to each 1,000 of population. |
|---|---|---|---|
| France | 38,517,905 | 540,405 | 14.0 |
| Germany | 52,270,901 | 587,933 | 11.3 |
| Austria-Hungary | 41,827,500 | 352,429 | 8.4 |
| Russia | 128,902,173 | 896,000 | 6.9 |
| Turkey | 33,569,787 | 213,910 | 6.3 |
| Italy | 29,899,785 | 324,686 | 10.8 |
| Great Britain | 37,888,439 | 258,348 | 6.8 |
| United States | 75,000,000 | 65,000 | .86 |

| | Population. | Army in present war. | Per cent. |
|---|---|---|---|
| Great Britain | 37,888,439 | 503,484 | 13.2 |
| United States | 75,000,000 | 100,000 | 1.33 |

NOTE.—The population of the United States in 1890 was 62,622,250. For the purpose of the tables it is estimated at 75,000,000. The permissible Regular Army until July 1, 1901, is 65,000; actually now 68,010. The permissible Volunteer Army is 35,000; actually now 31,856, to be reduced under existing law to 27,451 regulars, and the entire volunteer force to be discharged.

TABLE No. 2.—*Proportion of soldiers to area.*

| | Area in square miles. | Army in peace. | Soldiers to each square mile. | Square miles to each soldier. |
|---|---|---|---|---|
| France | 204,177 | 540,405 | 2.6 | 0.37 |
| Germany | 211,108 | 587,933 | 2.7 | .35 |
| Austria-Hungary | 201,591 | 352,429 | 1.2 | .57 |
| Russia | 8,660,395 | 896,000 | .103 | 9.6 |
| Turkey | 1,652,543 | 213,910 | .12 | 7.7 |
| Italy | 110,465 | 324,686 | 2.9 | .34 |
| Great Britain | 120,973 | 258,348 | 2.1 | .46 |
| United States | 3,602,884 | 65,000 | .018 | 55.4 |

| | Area in square miles. | Army in present war. | Soldiers to each square mile. | Square miles to each soldier. |
|---|---|---|---|---|
| Great Britain | 120,973 | 503,484 | 4.1 | 0.24 |
| United States | 3,602,884 | 100,000 | .028 | 36 |

TABLE No. 3.—*War budget in peace.*

| | Population. | War budget. | Year of budget. | Amount per capita. |
|---|---|---|---|---|
| France | 38,517,905 | $123,517,681 | 1898 | 3.20 |
| Germany | 52,270,901 | 141,175,350 | 1898 | 2.70 |
| Austria-Hungary | 41,827,500 | 86,083,024 | 1897 | 2.05 |
| Russia | 128,902,173 | 148,640,191 | 1898 | 1.15 |
| Turkey | 33,569,787 | 19,921,755 | 1897 | .59 |
| Italy | 29,899,785 | 45,659,609 | 1898 | 1.52 |
| Great Britain | 37,888,439 | 88,152,750 | 1897 | 2.32 |
| United States | 75,000,000 | 51,093,927 | 1896 | .68 |

Taking the armies of Europe at a period in 1899 when all European nations were at peace, and it will be seen that France, with 540,000 men, had 14 soldiers to each 1,000 of people, and 2.6 soldiers to each square mile; Germany, 590,000 soldiers, being 14.3 to each 1,000 and 3.7 to each square mile; Russia, 896,000, being 6.9 to every 1,000, and, on account of her enormous area (including Siberia), 9.6 square miles to each soldier; Great Britain, 258,000, being 6.8 to the 1,000 and 2.1 to each square mile.

Now let us compare the United States under existing conditions, all of the countries named being on a peace basis and the Republic at war. Our population in 1890 was 62,000,000. I estimate it now at 75,000,000, a conservative estimate. The Regular Army is, under existing law, 65,000, which is eighty-six one-hundredths of a soldier to each 1,000 of people. Adding the volunteer force now in the field and we have 1.33 soldiers to each 1,000, as compared with 9.7, which is the average of all European nations, and 13.2, which is the proportion in Great Britain at the present. And yet this absurdly small fraction of an armed man is declared by the cowardly cavilers and deceiving demagogues to be a threat at the liberty of the people. In France there are 2.6 and in Germany 2.7 soldiers to each square mile of territory, while in the United States there is one regular to each 55 square miles of American soil, and when the volunteers are added, one man to each 36 square miles. Truly this solitary soldier would have an active time of it lording it over such a broad domain. He would be ever on duty, and to accomplish anything his reveille would have to continue until after the bed taps, and taps never be sounded.

The following table, showing approximately similar conditions with respect to the organized militia of the various States and Territories, except that of Alaska and Indian Territory which have none, has been prepared in this office. The population is that reported in 1890, as the census for 1900 has not yet been published; and the organized militia force is taken from the latest abstracts received and published by the Adjutant-General's Office just previous to the Spanish war:

TABLE No. 4.—*Proportion of soldiers to population of States.*

| States, etc. | Population, 1890. | Area in square miles. | Organized militia, 1896. | Soldiers per 1,000 of population. | Soldiers to each square mile. |
|---|---|---|---|---|---|
| Alabama | 1,513,017 | 52,250 | 2,453 | 1.6 | 0.05 |
| Arizona | 59,620 | 113,020 | 478 | 8 | .004 |
| Arkansas | 1,128,179 | 53,850 | 1,019 | .9 | .02 |
| California | 1,208,130 | 158,360 | 3,770 | 3.1 | .02 |
| Colorado | 419,198 | 103,925 | 1,802 | 4.3 | .02 |
| Connecticut | 746,258 | 4,990 | 2,624 | 3.5 | .53 |
| Delaware | 168,493 | 2,050 | 457 | 2.7 | .22 |
| District of Columbia | 230,392 | 70 | 1,358 | 5.9 | 19.4 |

| Washington | 349,390 | 69,180 | 864 | 2.5 | .01 |
| West Virginia | 762,794 | 24,780 | 881 | 1.2 | .04 |
| Wisconsin | 1,686,880 | 56,040 | 2,622 | 1.5 | .05 |
| Wyoming | 60,705 | 97,890 | 415 | 6.8 | .004 |

Compared with the United States Army of 65,000 men, every State or Territory has more soldiers per 1,000 of population than the United States, and most of them have more soldiers to each square mile; the range per 1,000 of population being from 0.9 for Arkansas, Kentucky, Missouri, and North Carolina to 9.9 for Oklahoma Territory, and per square mile from 0.003 for Montana and Nevada to 19.4 for the District of Columbia.

### WATER TRANSPORTATION.

The wisdom of a disinterested inspection of our constantly growing transport fleet, by officers of the Inspector-General's Department, has been amply demonstrated during the past year, and it is believed that all should aid toward the perfection of the system and of the method of transportation, which promises to become one of the most important features of the military service. The necessary instructions were issued and the inspections begun under the directions of the Secretary of War, as contained in the telegram from the Adjutant-General's office of September 16, 1899, and letters of March 3, 1900, to the commanding general Department of California, and of October 13, 1899, to the commanding general Department of the East, which were as follows:

[Official telegram.]

WAR DEPARTMENT, ADJUTANT-GENERAL'S OFFICE,
*Washington, September 16, 1899.*

COMMANDING GENERAL, DEPARTMENT OF CALIFORNIA,
*San Francisco, Cal.:*

Having reference to previous instructions on the subject, the Secretary of War enjoins upon you the importance of careful inspection under your special directions, in addition to that made by officers of the transport service, of all ships, including hospital ships, on which troops are to embark; that you should, in this way, fully satisfy yourself that the best possible service in the way of transportation is being had.

H. C. CORBIN, *Adjutant-General.*

---

WAR DEPARTMENT, ADJUTANT-GENERAL'S OFFICE,
*Washington, March 3, 1900.*

SIR: The Secretary of War has carefully considered the question raised by the inspector-general in his communication of January 19, 1900, together with your remarks thereon in indorsement of January 31, 1900, regarding the inspection of transports leaving San Francisco, and has come to the conclusion that a careful inspection of all transports belonging to or chartered by the Government leaving the port of San Francisco should be made by the inspector-general of your department in addition to the inspections made by the sanitary inspector, the medical inspector, the officers of the transport service as required by transport regulations, and the supervising-inspector of the Treasury Department.

He therefore desires that you give the necessary instructions looking to the carrying out of this procedure.

Very respectfully,

JOHN A. JOHNSTON,
*Assistant Adjutant-General.*

---

WAR DEPARTMENT, ADJUTANT-GENERAL'S OFFICE,
*Washington, October 13, 1899.*

SIR: The Secretary of War directs that you cause all transports belonging to or chartered by the Government leaving the port of New York to be carefully inspected by the inspector-general of your staff. In his absence you will detail another officer of your department as special inspector. This inspection to be in addition to that of the transport service.

Very respectfully,

JOHN A. JOHNSTON,
*Assistant Adjutant-General.*

COMMANDING GENERAL, DEPARTMENT OF THE EAST,
*Governor's Island, New York.*

During the remainder of the fiscal year the inspection of transports by officers of the Inspector-General's Department has proceeded regularly under the instructions issued, and the reports received have been promptly acted on by this Bureau, and it is believed that the results of these inspections have been of marked benefit to the public service; and a somewhat similar practice and instructions to those issued for inspections at the ports of New York and San Francisco may wisely prevail in the insular possessions, so there will be an occasional inspection report showing the condition of the transports during actual service, as also of the transports which do not touch at those American ports. The reports by 12 officers of 70 inspections of 40 transports have been received during the past fiscal year, as shown in Appendix B; and the additional labor has fallen principally upon the New York and San Francisco offices and the insular dependencies, upon whom the greater bulk of the most important work of inspection had already largely devolved during the past fiscal year. How important such inspection duty was upon more than one occasion during previous wars, and the faithful zeal and tactful intelligence with which it has been accomplished now, is doubtless recognized by all who are familiar with the traditions of the corps. None have been daunted by the additional work, and it is believed the public service has been given opportunity to profit by this arduous work well done. Would it not be well to authorize the Quartermaster's Department to construct a pair of model transports to cap its purchased fleet, say twin-screw, fairly fast, strong, commodious, comfortable, safe, and healthful vessels, capable of carrying a battalion comfortably and promptly, with all its stores? The work has been so striking and important that, in view of all that lies before it, the Quartermaster's Department should be given every encouragement and opportunity to demonstrate the perfection of its system by having ships of its own design.

At the beginning of the last fiscal year there were in use on the Atlantic coast, in connection with the army transport service, 9 vessels employed in the transportation of troops and freight and 1 as a hospital ship, and in addition 3 steam lighters, 7 tugs, 6 barges, and 2 sloops, all of which were owned by the Government. At the same time there were in service in the Pacific fleet 1 cable ship, 5 troop ships, and 1 hospital ship, and 3 other vessels were being fitted out for this fleet as troop ships, also owned by the Government. In addition there were on June 30, 1899, 15 chartered vessels in service for duty on the Pacific Ocean.

The first of the transports to be refitted and put in thorough repair for the more comfortable accommodation of the officers and enlisted men carried on them were the *Grant*, *Sherman*, and *Sheridan*, and every effort was made to make them models of their class. These were followed by the refitting of the *Thomas*, *Logan*, *Meade*, *Crook*, and *Sedgwick* as troop ships, and the *Missouri* as a modern hospital ship. The other vessels purchased by the Government are being refitted as they can be spared from the service.

From the reports submitted comparative data indicating in detail the condition of the vessels owned and chartered by the Government for the use of the army transport service is shown in Appendix B.

The following extracts from the reports of Lieut. Col. M. P. Maus, inspector-general, U. S. Volunteers, Department of California, and of

Lieut. Col. R. B. Harrison, inspector-general, U. S. Volunteers, Department of Porto Rico, are submitted:

Lieutenant-Colonel Maus reports:

In making these inspections it has been the custom to have the marine superintendent, supervising engineer, transport quartermaster, and, at times, the master of the ship accompany me. Every part of the ship has been visited, and defects, needed repairs, and improvements noted and called to the attention of the transport officials.

Subsequent inspections have shown in almost every case that there has been promptness in making such repairs wherever practicable.

Ventilation, as a rule, is a difficult matter on ships, and in the more remote parts it is believed that the exhaust and forced-air systems should be combined, especially in the compartments occupied by the firemen and crew, which are low and more or less heated.

Suitability of transports.

It has been observed that the ships of the class of the *Sherman*, *Sheridan*, *Logan*, *Thomas*, and *Grant*, which carry on an average 1,822 officers and men and a large amount of cargo, are the most economical vessels. Such vessels can carry an organization complete, with all its impedimenta. The coal consumption of such vessels is not much more than that of the *Meade*, *Sumner*, and *Warren*, which, on account of their limited carrying capacity for both men and cargo and the large consumption of coal, are proportionately very expensive.

Building transports.

It is believed it would be in the interest of economy, comfort, and efficiency to make specifications for and cause the construction of the required number of transports for our foreign service. Such ships should be built with especial accommodations to carry organizations complete with their wheel and other transportation, animals, camp equipage, etc. Animal transports should especially be constructed with broad beam and bilge keels, in order to give plenty of space for the exercise of animals, to insure steadiness, and to provide at the same time for the other requirements of an animal ship which experience shows to be absolutely necessary for the safe passage of animals and assure their arrival in a serviceable condition, which is a matter as important as the requirements of troop ships.

Purchase and hire of transports.

Laws ought to be enacted by Congress permitting the Government to purchase or charter ships flying the United States flag at rates to be established on some equitable basis, when needed in case of war or other necessity. As the law now stands, the Government is at the mercy of owners of ships, brokers, and others.

Transport quartermasters.

Under the present transport regulations there is liability to conflict of authority between transport quartermasters and the masters of the ships in regard to their duties.

There can be no divided authority, and it is evident that all matters relating to the navigation of the ship, discipline of the crew, lifeboat drill, fire drill, and drill of the crew generally should be left to the master of the ship, who is naturally responsible for its proper navigation and safety. On him the crew depends. His authority in the hour of danger, and at other times, should be unquestioned. Seamen will receive punishment from the master of the ship that they will resent from the transport quartermaster or anyone else aboard the ship. If interfered with and authority divided, the result some day may be disastrous.

Life-preservers.

Racks above the berths for the storage and safe-keeping of life-preservers should be provided on all transports, where they should be required to be kept, not only to insure their serviceability, but to protect Government property.

Steward's department on transports.

Attention is invited to the fact that the steward's department of transports is under the control of the depot and purchasing commissary, while in all other respects the ships are under the control of the superintendent of the transport service, an officer of the quartermaster's department.

Animal transports.

The scuppers should discharge overboard and not into the bilges. When they do discharge into the bilges the refuse must necessarily be pumped out by the bilge pumps. Solid matter is more or less liable to get into the pipes and they are in danger of becoming disabled by being clogged. If the bilges are not well flushed and kept clean, which at times may become difficult to do, bad sanitary conditions arise. This is a most important matter, and wherever possible ships should not be employed where the scuppers do not discharge overboard and are not adequate to pass the refuse.

Animal ships should have a broad beam and bilge keels in order to give stability and at the same time provide suitable space for the animals that they may be taken out and given some exercise and recreation from the restraint of the stall.

Much care has been taken in the inspection of these vessels in ascertaining that the best accommodations under the circumstances have been provided. Reports containing information as to the suitability of stalls, feeding, watering, etc., have been consulted. The proper dimensions and suitability generally of stalls, especially with regard to strength, have been duly considered. With the exception of the *Siam*, where the stalls broke loose in a typhoon and most all of the animals were destroyed, they have generally been strong and well constructed. Quite a number of animals, however, have been lost in transportation from various causes, the exact number of which I have been unable to determine.

The ventilation of animal transports has generally been good. It has consisted of the forced-air system, wind sails, ports, and open hatches. Horses carried on the upper decks have fared especially well in this respect. Those on the lower decks, while they have had less motion from their location, have not been so well supplied, but, as far as known, there have been no serious results.

Electric lights have been installed, and awnings and other protection needed in the more northern routes, especially for protection against rain and cold weather, have been provided. Horses are very liable to contract pneumonia as a result from such exposure, and precautions in this respect are important.

Water has been supplied in large tanks, one of which has been provided for each compartment, and it is believed that, all things considered, the results have been generally satisfactory.

Stalls.

Ships have been fitted out with various kinds of stalls, generally well made, and padded fore and aft. Slings and breast straps have also been supplied for use when necessary. The dimensions and construction of stalls is a most important matter, but as far as known there is no standard fixed by the Department for them. Those placed on ships here have varied in size from 7 feet in length and 29 inches in width to 6 feet 6 inches in length and 27¼ inches in width. Those which have appeared most satisfactory have been placed upon the *Strathgyle* and *Aztec*, the last ships fitted out. The dimensions have been, length 6 feet 6 inches, width 27¼ inches, both measurements in the clear. Two side boards, made of smooth 12-inch lumber, are placed on the sides, which board them up to within 22 inches of the deck. Four cleats have been placed on the floor, inside the stall, and one in front in the alleyway. These stalls have been very strongly made, both sides and front posts being detachable.

The transport regulations have no instructions on this subject. It is suggested that such regulations and instructions be formulated and issued for the guidance of all concerned. This is an important matter, and to date it is left largely to the opinion of individuals, as is shown by the frequent changes in dimensions and other arrangements.

Adjustable stalls.

As animals differ greatly in size, from the heavy battery or draft horse to the light cavalry or saddle horse, and the draft and pack mules, it would seem that in fitting out ships due consideration should be given to this fact.

If properly constructed, stalls can be taken apart and used again when necessary. They should be arranged so as to be suitable for animals of different sizes and also to the requirements of the weather. In rough weather it is well known that animals should be kept as tight as possible to prevent knocking about, while in smooth seas they should be given more freedom. This can only be done with adjustable stalls. Suitable plans for the same could easily be provided, and they would cost but little more than the ordinary stalls.

Feeding and watering.

Paragraph 341 of the transport regulations gives directions as to feeding. The opinions of officers vary as to the suitability of this ration. One officer finds that bran mash should be fed for three or four days after starting out, and then grain, to be varied at times with bran mash. Another officer states that the feeding of straight grain invariably has given his horses colic. It is further stated that after a period of mixed bran and oats diet or bran mash the bowels become too sensitive to receive straight oats, even for a short period. Much seems to depend, however, on how the horses have been treated before going aboard ship. Alfalfa is recommended as especially suitable in the way of hay and has a laxative tendency, while the wheat hay furnished horses at this port was not relished by the animals.

This is a very complicated subject, and regulations, as full as possible, covering the various kinds of food suitable, ought to be prepared, especially for the use of officers who have had limited experience. The safe transport of animals and their arrival in proper condition depends largely upon the diet. Tanks have generally been supplied in each compartment. These should always be provided with faucets from which water can be drawn in buckets. The dipping of buckets into the supply tanks is liable to impair the purity of the water.

It would greatly facilitate watering, and be desirable, to have pipes carried through the compartments, with faucets arranged at suitable points from which the water can be drawn. A full supply of water for the voyage should be carried in tanks, and the condensers not depended upon. A careful inspection as to the cleaning and disinfecting of tanks, however, should be made before filling.

Officers in charge, care takers, etc. It is fully as important, if not more so, to have as experienced an officer in charge of an animal transport as of a troopship. For obvious reasons the animal demands, from its helpless condition, especial care and attention. The great object is to insure arrival in good condition, ready for service.

Animal transportation is very costly, and their value on arrival at times is inestimable.

It would be of interest to the Government to assign especially experienced and able officers in charge of animal transports, and to assign permanently to such ships veterinarians, trained crews, and care takers. Such men ought to be comfortably quartered and well paid. Good men discharged from the mounted service would be especially suitable. These crews would become used to the sea, and the difficulty arising from green men, who become ill often as soon as the vessel leaves the harbor and strikes the least rough weather, would be obviated. In some cases it has been reported that a very large percentage of the care takers have become so ill for extended periods as to render the proper care of animals, cleaning the ship, etc., impossible.

Commendation. I would invite attention to the immense amount of work done at this port by the transport service, and the satisfactory results generally in the transportation of men, animals, and supplies of all kinds. Not a life has been lost through accident. This service has been under the charge of the general superintendent, Maj. Oscar F. Long, whose incessant labor and faithful and intelligent performance of duty are deserving of high consideration.

Lieutenant-Colonel Harrison reports:

The transport service of the island up to last June, when the movement of relief supplies began to be discontinued, was of the highest order. During this period Porto Rico enjoyed a weekly transport service with clean and comfortable accommodations, good meals, and regular days of arrival and departure of transports. During the period from August 10, 1899, to June 30, 1900, the transport service, in addition to transporting the regular supplies for the maintenance of the army in Porto Rico, transported more than 32,000,000 pounds of relief supplies, and in addition to making substantial contribution to the relief and distress of the island established a high-water mark for efficiency, as the great work was performed without the loss of a single life or substantial injury to a single ship other than the damage to a tugboat.

Nothing has contributed so much to the comfort and happiness of men on service in Porto Rico, and made them willing to cheerfully endure such service, as a good transport service. It has brought them in close touch with our home country and its necessities and home comforts, and made it possible for the officers and enlisted men to have their wives and children with them at the minimum of cost. It has brought relief supplies and school furniture without cost, and in thousands of ways has contributed to the advancement, improvement, relief, and education of this island.

Cuba is less than twenty-four hours' travel from the United States and Porto Rico is more than five days'.

If such good results are attainable with second-hand ships, what can be fairly expected of new ones designed especially for this duty?

### LAND TRANSPORTATION.

In former reports the importance of the coming question of mechanical land transportation has been reverted to, and the present situation can be sufficiently summarized in a single extract from the United Service Magazine of September, 1900, viz:

The value of road locomotives as compared with that of horses, mules, or bullocks for army transport work is obvious. So long as fuel is obtainable and the roads are practicable the traction engine can be relied upon to keep up with troops, and thus avert the fatigue and weariness that soldiers feel during the incessant halts to permit the convoy to close up. Moreover, traction engines can always do work up to the limits of their natural strength, whereas draft animals deteriorate rapidly under hard work. The engines, it is true, break down occasionally, but it very rarely happens that the mischief extends beyond what the engineers can speedily repair on the spot. In short, while the steam horse can generally be set on his legs again without much difficulty, the actual horse or mule that drops in his tracks can not be resuscitated unless by a miracle. * * *

At the close of the present operations in South Africa the military authorities will doubtless issue a report upon the use of traction engines during the campaign.

The Signal Corps has secured the first motor vehicles for the Army yet reported. It may be well to remember that "your carriages were heavy laden; they are a burden to the weary beast."

## DISBURSEMENTS.

A tabulated summary of the money inspected for the current decade is indicated in Appendix E, Tables A and B, the total covered by the ten years' inspection showing $1,183,729,647.32 involved in money accounts, or an average of $118,372,964.73 per annum; the largest being in 1899, involving over $350,000,000, and the smallest in 1891, being less than $63,000,000. Is this not some indication of the growth in the work of this Department which should be most carefully provided for?

During the latter half of the fiscal year 1898 very few inspections were made on account of the officers being in the field in the war with Spain, and the inspections for 1899 included those that were omitted in 1898, so the amount involved for 1899 was necessarily unusually large. During the fiscal year ending June 30, 1900, there were made 1,406 inspections of the accounts of disbursing officers, the amount involved, including transfers, being $287,700,522.05, as against $350,855,522.73 for the fiscal year 1899, a decrease of $63,155,000.68. If it is clearly decided how many of such inspections should be made during the year by one officer, some of them taking days to make and involving thousands of checks to verify and millions of money disbursed, the proper number of officers for the corps can be approximately determined, and it will surely be more than are now authorized. And each of them can accomplish more and better work when given an efficient clerk to help him see and do things, especially about money matters, which must need all-seeing eyes. If $10,000,000 each or fifty such inspections would be a fair stint of work in addition to other duties, evidently about thirty officers can be well employed at it.

The total amount involved in the inspections for the fiscal year 1900 is much larger than those heretofore made that pertain to the transactions of any one fiscal year, and they may be summarized as follows:

| | | |
|---|---|---|
| Balances taken up | | $22,140,624.25 |
| Receipts from Treasury | $145,561,447.47 | |
| Receipts from other sources | 9,100,570.29 | |
| | | 155,662,017.76 |
| Transfers from other officers | | 109,897,880.04 |
| Total to be accounted for | | 287,700,522.05 |
| Disbursements | $150,372,936.51 | |
| Deposited to credit Treasurer United States | 13,678,631.99 | |
| | 164,051,568.50 | |
| Transferred to other officers | 102,863,086.35 | |
| | | 266,914,654.85 |
| Balance | | 20,785,867.20 |
| Discrepancy in account of acting assistant quartermaster, St. Francis Barracks | | 18.34 |
| Discrepancy in account of assistant commissary of subsistence, Fort Wingate | | 3.36 |
| | | 20,785,888.90 |
| Balance distributed as follows: | | |
| United States Treasury | | 16,376,887.85 |
| United States depositories | | 2,644,288.22 |
| Cash on hand | | 1,763,001.83 |
| Unaccounted for at Marion Branch National Home for Disabled Volunteer Soldiers | | 1,711.00 |

It is submitted that these figures are not insignificant, nor the duty they indicate unimportant. The mere physical labor involved in making four such inspections every day in the year, covering a daily average of $750,000, deserves recognition and adequate provision. The difficulties and disadvantages under which this important duty has labored, especially for lack of sufficient and skillful clerical assistants, it is hoped may yet be removed or alleviated. With three times the disbursements to inspect, is it not well to provide the specially good service its importance suggests? Officers may be borrowed for a certain period, but who will lend a clerk for more than a day contentedly?

Of the $1,763,001.83 reported as cash on hand the sum of $43,000 was in bonds held by the several Branches of the National Home for Disabled Volunteer Soldiers, which also held the sum of $5,178.84 actual cash or checks on hand; and the treasurer of the United States Soldiers' Home had $119.91 cash on hand, leaving the sum of $1,714,703.18 cash in the hands of disbursing officers of the Army at the close of the fiscal year, as against $1,523,557.08 for the preceding year and $14,604.16 in 1897. The amount for 1900 is about 0.012 per cent of the entire year's disbursements by them and 161 per cent of the monthly disbursements, as against 118 in 1897. The extreme and average in the hands of army disbursing officers who held cash on hand were, respectively, $1,013,129.66 and $5,460.83, and the similar figures for 1897 were $3,830.37 and $35.32. The extreme and average of those who had funds in national-bank depositories were, respectively, $143,048.46 and $17,078.82, including post commissaries and quartermasters; and the highest amount at date of last inspection to the credit of any disbursing officer of the Army was $1,919,464.96 (as against $204,653.88 in 1897) and of the Soldiers' Homes, $464,435.94. The question of excessive balances has already received your attention, and remedial action has been applied.

The above statement shows a decrease of $63,155,000.63 from the amount involved in the accounts inspected during the fiscal year 1899, and the following tabulation shows where the decrease occurred:

| | | |
|---|---|---|
| Decreased amounts: | | |
| Quartermaster-General's Department | | $12,405,662.76 |
| Pay Department | | 62,276,507.71 |
| Engineer Department | | 1,099,130.17 |
| Ordnance Department | | 9,974,303.53 |
| Miscellaneous | | 4,983.59 |
| Total | | 85,760,587.76 |
| Increased amounts: | | |
| Subsistence Department | $5,480,441.14 | |
| National Homes for Disabled Volunteer Soldiers | 1,300,957,58 | |
| Transport service | 15,151,171.85 | |
| Medical Department | 652,025.17 | |
| Recruiting officers | 20,419.29 | |
| Adjutant-General's Department | 572.05 | |
| | | 22,605,587.08 |
| Net decrease | | 63,155,000.68 |

The Army disbursements from the Treasury for the past four fiscal years may be designated in groups, as follows:

| Disbursements. | 1897. | 1898. | 1899. | 1900. |
|---|---|---|---|---|
| Army | $29,873,506.27 | $22,283,505.40 | $151,672,186.79 | $117,998,589.75 |
| River and harbor | 14,357,562.56 | 15,479,935.46 | 25,842,266.93 | 24,769,168.63 |
| Other civil | 5,345,969.08 | 6,764,163.56 | 6,982,941.15 | 7,610,228.13 |
| Total | 49,577,037.91 | 44,527,604.42 | 184,497,394.87 | 150,372,986.51 |

During the past eight fiscal years the relation between the total amount involved and the disbursements, transfers, deposits in the Treasury, and balances on hand appear as follows:

| Designation. | 1893. | 1894. | 1895. | 1896. | 1897. | 1898. | 1899. | 1900. |
|---|---|---|---|---|---|---|---|---|
| Disbursements | 0.727 | 0.760 | 0.756 | 0.710 | 0.706 | 0.712 | 0.527 | 0.523 |
| Transfers between officers | .191 | .163 | .158 | .207 | .197 | .184 | .372 | .355 |
| Redeposited in Treasury | .025 | .015 | .018 | .013 | .018 | .017 | .031 | .048 |
| Balances on hand | .057 | .062 | .062 | .070 | .079 | .087 | .070 | .074 |

The doubling since 1894 of the percentage of mere transfers back and forth between officers, especially in the last two years, may not indicate waste work.

The average monthly disbursements of officers of the Army whose accounts were inspected during the year was $11,896,892.36, and their final balances represented 161 per cent of this average, as against 158 in 1899, 173 in 1898, 118 in 1897, 125 in 1896, 107 in 1895, and 88 in 1894. This gradual increase until the maximum about doubled the minimum has received your attention and is being corrected. Perhaps a similar statement of the annual per capita expense of a soldier in the several departments and under the several items would be equally instructive.

The subjoined tabulation shows the variation in these percentages in the principal disbursing departments during ten fiscal years, as follows:

| Department. | 1891. | 1892. | 1893. | 1894. | 1895. | 1896. | 1897. | 1898. | 1899. | 1900. |
|---|---|---|---|---|---|---|---|---|---|---|
| Engineer | 293 | 104 | 82 | 75 | 83 | 116 | 133 | 160 | 148 | 158 |
| Ordnance | 191 | 124 | 105 | 115 | 139 | 113 | 130 | 86 | 123 | 174 |
| Quartermaster | 130 | 53 | 120 | 135 | 179 | 170 | 161 | 256 | 186 | 245 |
| Subsistence | 102 | 99 | 39 | 73 | 119 | 89 | 109 | 133 | 146 | 68 |
| Medical | 82 | 102 | 186 | 83 | 131 | 205 | 71 | 313 | 126 | 171 |
| Pay | 57 | 48 | 90 | 66 | 83 | 77 | 101 | 108 | 142 | 142 |
| Total | —— | 99 | 94 | 88 | 107 | 125 | 118 | 173 | 158 | 161 |

As these are percentages, the difference in the strain during the several years and in the methods of the several bureaus may be partially indicated, and it is probable that the Government work was equally well done during those years that the balances were not excessive.

The total number of inspections made during the fiscal year 1900, including statements made under Army Regulations 877, verified by the inspector, was 1,406.

The following table shows the number of these inspections for four fiscal years, which the law requires shall be made frequently, to wit:

| Accounts. | 1897. | | 1898. | | 1899. | | 1900. | |
|---|---|---|---|---|---|---|---|---|
| | Officers. | Inspections. | Officers. | Inspections. | Officers. | Inspections. | Officers. | Inspections. |
| General staff officers | 216 | 558 | 205 | 362 | 324 | 497 | 301 | 666 |
| Post staff officers | 176 | 352 | 186 | 305 | 217 | 391 | 316 | 554 |
| Other line officers | 18 | 23 | 28 | 35 | 36 | 46 | 109 | 175 |
| Soldiers' Home | 10 | 10 | 11 | 11 | 10 | 12 | 11 | 11 |
| Total | 420 | 943 | 430 | 713 | 587 | 946 | 737 | 1,406 |
| Average each staff officer | ........ | 2.5 | ........ | 1.7 | ........ | 1.5 | ........ | 2.2 |
| Average each post officer | ........ | 2.0 | ........ | 1.6 | ........ | 1.8 | ........ | 1.7 |

Of the 1,406 inspections, involving $287,700,522.05, it appears from the following tabulation that 1,153 inspections (including 385 inspections of post officers), involving $273,958,945.25, were made by officers of this department, and 7 inspections (of which 3 were of post officers), involving $129,295.96, were made by other officers, to wit:

| Department. | Inspected. | | |
|---|---|---|---|
| | Officers. | Inspections. | Amount involved. |
| Adjutant-General | 16 | 24 | $4,770.55 |
| Quartermaster-General: | | | |
| Staff | 72 | 133 | 69,611,202.21 |
| Post | 159 | 270 | 2,286,937.90 |
| Subsistence: | | | |

Cuban insular funds.

The following statement shows a summary of the inspections of insular funds made by officers of this Department during the past fiscal year:

| | | |
|---|---|---|
| Balance taken up | | $127,629.36 |
| Received from Insular Treasury | | 28,936,245.35 |
| Received from other officers | | 11,754,012.56 |
| Received from sales | | 6,527.68 |
| Received from customs | | 832,596.43 |
| Received from other sources | | 135,156.25 |
| Total receipts | | 41,792,167.63 |
| Disbursements | $11,999,731.55 | |
| Transferred to officers | 23,940,314.58 | |
| Deposited to credit of Insular Treasurer | 1,962,110.61 | |
| | | 37,902,156.74 |
| Balance to be accounted for | | 3,890,010.89 |

Distribution of balance:

| | | |
|---|---|---|
| North American Trust Co | | $2,593,860.79 |
| Cash on hand | | 1,296,110.19 |
| Amount of short deposits | $40.60 | |
| Amount of over deposits | .69 | |
| | | 39.91 |
| | | 3,890,010.89 |

### INSPECTIONS UNDER ARMY REGULATIONS, 867 AND 868.[1]

The reports indicate that the quartermaster, subsistence, and medical supply depots, hospitals, armories, arsenals, military prisons and prisoners, etc., both in the United States and our insular possessions, have been very efficiently managed and are generally in a very satisfactory condition.

A detailed statement, giving much valuable and interesting information relative to all inspections under Army Regulations, 867 and 868,[1] may be found in Appendix A.

It may be noted that the present edition of the Army Regulations was framed to apply to what may be called the district system of general inspection, which had been adopted as the most economical and efficient form, but possibly not the most popular. In 1898 the geographical department method was adopted, but the order (G. O. 143 of 1899) announcing the general regulations appropriate to this system is not to be issued. So the work of the Department is occasionally questioned. For instance, paragraph 955 of the Army Regulations of 1889, as amended by General Orders, No. 38, 1890, and paragraph 868 of 1895, and General Orders, No. 109 of 1898,[2] seem fairly clear when duty is assigned by the Secretary of War to officers of this Department, but these instructions have occasionally been questioned and the duty delayed. To be most efficient, inspection work and results must be prompt, and a table showing where and how reports are delayed by circumlocution is presented in the annual report to the Lieutenant-General Commanding as relating more particularly to matters concerning the military discipline and instruction of the Army under General Orders, 28, of 1876.[1]

---

[1] A. R. 867: Officers of the Inspector-General's Department will inspect once in each year all military commands, garrisoned posts and camps, and once in two years such ungarrisoned posts and national cemeteries as can be visited without departing materially from the routes of other prescribed inspections.

A. R. 868: All depots, armories, arsenals, and public works of every kind under charge of officers of the Army, except works of engineering conducted under the direction of the Secretary of War and supervision of the Chief of Engineers, will be inspected annually by officers of the Inspector-General's Department. These inspections will include military and business administration and methods, but will not extend to the scientific or technical character of work, for which the officer in charge is responsible, through the head of his department, to the Secretary of War.

[2] A. R., 955, of 1889 as amended by G. O., 38, 1890: In addition to the inspections provided for in paragraphs 954, 966, and 967, the Military Academy, the Schools of Application, all depots, rendezvous, armories, arsenals, fortifications, and public works of every kind under charge of, or carried on by, officers of the Army will be inspected at least once each year by officers of the Inspector-General's Department, under instructions from the Secretary of War. These inspections will be restricted to administrative and business methods, and will not extend to nor include the scientific or technical character of the work for which the officer in charge is professionally responsible, through the head of his department, to the Secretary of War. Reports of these inspections will be forwarded direct to the Inspector-General of the Army.

G. O., 109, of 1898: To provide for the inspections required by paragraphs 868, 870, and 871 of the Army Regulations, the Inspector-General of the Army will keep the inspectors-general of the military geographical departments informed, through the department commanders, of the inspections under these paragraphs and such other inspections which the Secretary of War desires shall be made by them; and that each of these inspectors will, at the proper time, submit for the consideration of his immediate commander a plan for making the inspections so desired in the most advantageous and economical manner in connection with the other inspections they may be required to make. If the plan be approved, the department commander will then give such orders as may be required for the necessary travel.

### NATIONAL HOME FOR DISABLED VOLUNTEER SOLDIERS.

During the past fiscal year Gen. William B. Franklin resigned the presidency of the board of managers of the Home, after having performed the arduous and exacting duties of that responsible position with great efficiency and zeal for many years. Under his administration the Home grew, prospered, and improved in many ways. He was succeeded as president of the board of managers by Gen. William J. Sewell, whose long experience as an active member of the board peculiarly fitted him for the position; but his many other duties, both public and private, were so pressing that he was impelled to resign the presidency of the board after serving in that capacity for only a few months. Gen. Martin T. McMahon, who was chosen president of the board in his stead, has also had a long service as an active member of the board of managers and brings to the performance of his new duties the ripe results of an extended experience, as well as high efficiency.

The Home in all its branches has been inspected by officers of this department since 1893 with an earnestness and thoroughness which has produced most satisfactory results. Any further inspections would doubtless only contribute to retaining the present excellent conditions existing; and it may be advisable to discontinue further work of this department in view of our very limited personnel and the large additional duties placed upon us incident to the Spanish war, if it is thought best to curtail our duties in any manner, rather than to provide adequate force to perform them thoroughly. Hampered or perfunctory inspections are possibly worse than none.

---

[1] G. O., No. 28, of 1876. The following orders of the President of the United States are hereby promulgated for the information and guidance of all concerned:

The Headquarters of the Army are hereby reestablished at Washington City, and all orders and instructions relative to military operations, or affecting the military control and discipline of the Army, issued by the President through the Secretary of War, shall be promulgated through the General of the Army, and the Departments of the Adjutant-General and the Inspector-General shall report to him and be under his control in all matters relating thereto.

A. R. 767. Chiefs of bureaus of the War Department are authorized to correspond directly with the Secretary of War and with the subordinate officers of their respective corps upon any matter relating exclusively to the duties of the bureau required by statute to be performed under the direction of the Secretary of War, and necessary subreferences of such correspondence and subreports will, in like manner, be direct through officers of the respective corps. Such correspondence with subordinate officers will not embody instructions to be carried out by an officer reporting to or serving under an officer commanding troops in relation to any matter not specifically excepted from his command and control by law or by the Secretary of War, and replies thereto will not embody remarks or recommendations on matters pertaining to the administration of the officer commanding.

A. R. 859, as amended by G. O. 11, 1898. Inspectors-general and acting inspectors-general will report by letter, on arriving at their stations, to the inspector-general at the War Department; they will furnish him copies of all orders and written instructions received for tours of inspection, with a report of the dates of departure from and return to their posts in obedience thereto; and thereafter, on the last day of each month, will report direct to him their addresses and the duties they have performed during the month. Correspondence in the Inspector-General's Department between the head thereof and officers serving therein will be direct, for the purpose of instruction and information with respect to the discharge of their duties; not, however, extending to matters of administration pertaining to military commanders.

The annual inspection of the various Branches of the Home for the fiscal year 1901 is now in progress under Major Knox, inspector-general, assisted by Mr. D. C. Spencer during Mr. Kent's absence in the Antilles; and that for 1900 was also made by the same officer, assisted by Mr. William T. Kent, accountant of the Inspector-General's Department. And the tours, with some interruption, lasted from September 3 to December 8, 1899, a period of about three months, and from July 20 to November 14, 1900, a period of about four months. A slight shortage at the Marion Branch last year and at the Dayton Branch this year was immediately made good. At these inspections it was reported that the various Branch Homes were generally found in excellent condition, the grounds and buildings thoroughly policed and clean, and excellent discipline maintained. As usual, however, a very crowded or congested condition was found at some of the Homes. And this was especially the case at the Eastern Branch, where it is hoped the new barracks will afford some much-needed relief. It was also reported that the administration of the Home affairs was in the hands of an exceptionally capable, efficient, and intelligent body of officers, from highest to lowest; which, of course, guarantees an excellent condition and very satisfactory results generally.

The following legislation by Congress, in the act making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1901, was approved May 26, 1900, to wit:

> Hereafter the following persons only shall be entitled to the benefits of the National Home for Disabled Volunteer Soldiers, and may be admitted thereto upon the order of a member of the board of managers, namely: All honorably discharged officers, soldiers, and sailors who served in the regular or volunteer forces of the United States in any war in which the country has been engaged, who are disabled by disease, wounds, or otherwise, and who have no adequate means of support, and by reason of such disability are incapable of earning their living.

This legislation extends equal benefits and rewards to all its defenders and may intensify the crowded condition that already exists at most of the Branch Homes. It has been estimated that the maximum membership of the Home will be reached probably about the year 1908. But as it may now be expected that soldiers of the war with Spain, as well as those who have served under the most trying climatic conditions in the campaigns in the Philippines, will soon be asking admission, it is more than probable that the period of maximum membership will be deferred for some years after 1908. This probability renders it all the more important that some just and liberal system of outdoor relief be established practically and carried out at least within the limits of current appropriations, as is already authorized by section 4833[1] of the Revised Statutes. It has already been pointed out, in a previous report, that the amount of money turned into the surplus fund for five years from the appropriations for the National Home for Disabled Volunteer Soldiers would have supported an average of more than 2,000 men a year, on an outdoor relief allotment of $8 per month, or $96 a year—thus during that period thoroughly relieving the congested condition at the Branches. Such an arrangement would be beneficial alike to the Government and to the worthy veterans, many of whom would gladly welcome it. Such a plan would not be an experiment, for similar methods have been thoroughly tested at the Regular Home, and at some of the State Homes; where they have worked to the satisfaction of all concerned.

---

[1] SEC. 4833. The managers of the National Home for Disabled Volunteers are authorized to aid persons who are entitled to its benefits by outdoor relief in such manner and to such extent as they may deem proper; but such relief shall not exceed the average cost of maintaining an inmate of the Home.

During the past fiscal year the accounts of the Home have, without exception, been promptly received, and always in good condition. That they receive close scrutiny in the general treasurer's office, as well as at the Branch Homes, is shown by the fact that the defects and irregularities found in them are but few indeed and seem to be constantly decreasing in number; and even those noted, few as they are, are rarely of a serious character.

The appropriations for the Home, for all purposes, for the fiscal year ending June 30, 1900, amounted to $2,760,044, exclusive of $550,000 for the further construction of the new Branch at Danville, Ill. The similar appropriations for the preceding fiscal year were $2,649,521. Of the appropriations for the fiscal year 1900 the sum of $120,600 was for special constructions at the several Branches (other than Danville), leaving the sum of $2,639,444 for the maintenance of the members at all the Branches, as against $2,523,996 for the preceding year, an increase of $115,448.

The population of the Homes during the fiscal year, as shown by the trimonthly reports, ranged from 17,869 on July 10, 1899, to 20,357 on February 28, 1900, and the average population for the entire year was 19,238, an increase of 403 over the average for the preceding year, and of 668 over the average for the fiscal year 1897 and of 3,637 over the average for the fiscal year 1894, the first covered by this general inspection. The population of the new Branch at Danville, Ill., was 251 on July 10, 1899, and 1,127 on June 30, 1900, an increase of 876 members during the year. The average membership present at this Branch during the year was 873. As many of these members were transferred from the seven older Branches, the combined average annual membership of the latter was reduced by 470; but even this falling off left some of them still overcrowded.

The total population present and absent at all the Branches during the year ranged from 21,901 on July 30, 1899, to 25,540 on June 30, 1900, and the average was 24,897, so the difference between the average membership present and absent and the average membership actually present was 5,659. Some of them may keep their names quite unnecessarily on the rolls for years, simply as a matter of sentiment or to maintain their rights against a rainy day or against later applicants. It would be a very serious question as to how to dispose of and care for these absentees if they should all return within a year or two to the various Branches to which they belong. In such a contingency it seems that a liberal system of outdoor relief would be the only way out of the difficulty, and it might be a very good plan to take time by the forelock by preparing for a possible contingency before it arises.

Since 1894 the variations of the annual cost of maintenance per capita have been as follows:

| Year. | Population. | Expense per capita. |
|---|---|---|
| 1894 | 15,601 | $141.41 |
| 1895 | 16,480 | 128.78 |
| 1896 | 17,451 | 126.08 |
| 1897 | 18,178 | 121.51 |
| 1898 | 18,570 | 125.99 |
| 1899 | 18,855 | 128.48 |
| 1900 | 19,238 | ........ |

During the fiscal year 1900 there was received from the effects of deceased members (posthumous fund) the sum of $41,468.82, and disbursed on the same account the sum of $20,715.88, leaving a balance of $20,752.94 to be carried to the appropriation for "current expenses," as follows:

| Branch. | Amount received. | Amount disbursed. | Balance to current expenses. |
|---|---|---|---|
| Central | $15,397.40 | $5,287.60 | $10,109.80 |
| Northwestern | 5,510.05 | 4,661.49 | 848.56 |
| Eastern | 3,789.11 | 2,490.63 | 1,298.48 |
| Southern | 6,518.45 | 2,532.95 | 3,985.50 |
| Western | 2,610.97 | 2,112.49 | 498.48 |
| Pacific | 3,894.10 | 1,150.53 | 2,743.57 |
| Marion | 3,350.25 | 2,254.08 | 1,096.17 |
| Danville | 398.49 | 226.11 | 172.38 |
| Total | 41,468.82 | 20,715.88 | 20,752.90 |

The act of August 18, 1894, requires the transfer of posthumous funds to the appropriation for current expenses; and under the operation of that law the following transfers have been made for the fiscal years named:

| Year. | Received. | Disbursed on posthumous account. | Balance to current expenses. | Covered into Treasury. |
|---|---|---|---|---|
| 1894 | [1]$152,232.63 | | [2]$123,058.74 | $29,173.89 |
| 1895 | 46,954.98 | $22,143.56 | 24,811.42 | 24,811.42 |
| 1896 | 43,674.74 | 22,841.63 | 20,833.11 | 20,833.11 |
| 1897 | 49,451.15 | 25,466.47 | 23,984.68 | 23,984.68 |
| 1898 | 43,623.05 | 30,153.12 | 13,469.93 | 13,469.93 |
| 1899 | 51,076.01 | 29,115.43 | 21,960.58 | 21,960.58 |
| 1900 | 41,468.82 | 20,715.88 | 20,752.94 | 20,752.94 |
| Total | 428,481.38 | 150,436.09 | 248,871.40 | 154,986.55 |

[1] $29,173.89 of this was covered into Treasury.

[2] 1895.

The subjoined tabulation shows the amount appropriated for maintenance of members and for special constructions for the fiscal years involved, viz:

| Year. | Average membership. | Appropriation. | For special construction. | For maintenance. |
|---|---|---|---|---|
| 1893 | 14,661 | $2,618,215.49 | $207,540.00 | $2,410,675.49 |
| 1894 | 15,601 | 2,379,872.99 | 1,309.10 | 2,378,563.89 |
| 1895 | 16,480 | 2,324,473.00 | 94,100.00 | [1]2,230,373.00 |
| 1896 | 17,451 | 2,514,846.00 | 173,500.00 | 2,341,346.00 |
| 1897 | 18,178 | 2,492,183.16 | 161,814.75 | 2,330,368.41 |
| 1898 | 18,570 | 3,424,975.00 | [2]1,091,464.00 | 2,333,511.00 |
| 1899 | 18,335 | 2,652,644.50 | 124,525.00 | 2,528,119.50 |
| 1900 | 19,238 | 2,841,890.21 | 120,600.00 | 2,721,290.21 |
| 1901 | | 3,090,200.00 | 129,350.00 | 2,960,850.00 |
| Total | 139,104 | 24,339,300.35 | 2,104,202.85 | 22,235,097.50 |
| Annual average | 17,377 | 2,704,366.63 | 233,800.32 | 2,470,566.31 |
| Annual average per capita[3] | | 152.85 | 14.21 | 138.64 |

[1] Including $1,000,000 for construction of Danville Branch.

[2] Exclusive of $123,058.74 appropriated from posthumous fund.

[3] Exclusive of fiscal year 1901.

The following is a summary of the receipts and disbursements for the fiscal year ending June 30, 1900:

STATEMENT A.—*Receipts and disbursements, National Home for Disabled Volunteer Soldiers, during the fiscal year 1900.*

| | Establishing Danville Branch. | Fiscal year. | | | | Total. |
|---|---|---|---|---|---|---|
| | | 1897. | 1898. | 1899. | 1900. | |
| *General fund.* | | | | | | |
| Balance on hand June 30, 1899. | $31,179.97 | $89.19 | $11,974.70 | $340,218.85 | | $383,462.71 |
| Received from Treasury | 425,000.00 | | 199.42 | 4,691.03 | $2,608,863.46 | 3,038,758.91 |

| In hands of disbursing officers. | 292.92 | 95,876.81 | 17,772.19 | 439,976.78 | 553,918.70 |
| Total | 175,745.87 | 245,462.14 | 196,734.24 | 672,911.53 | 2,086,751.68 |

[1] Includes $152,232.63 posthumous funds, act Aug. 18, 1894.
[2] Disbursements less proceeds of sales and repayments.
[3] Including $1,000,000, "Establishing Danville Branch."

## SOLDIERS' HOME, DISTRICT OF COLUMBIA.

The annual inspection of the Soldiers' Home, District of Columbia, its records, accounts, management, discipline, and sanitary condition was made during the week ending July 14, 1900, under the act of March 3, 1883.

The Home was generally in excellent condition throughout, and the improvements and repairs accomplished during the year, amounting to about $150,000, are a decided advance toward increasing the comfort, contentment, and convenience of the men for whose benefit this magnificent institution was established nearly half a century ago. The enlargement of the King Building, giving room for 125 additional beds, and the annex to the hospital, with an increased capacity of 30 patients, are the most important changes effected during the year. The installation of elevators in these buildings and of other modern improvements and appliances meets a long-felt want, and makes the need for them in the larger central barracks still more evident.

The officers of the Home are efficient and painstaking, and devoted to their duties; but the number seems insufficient, and it would be beneficial if an adjutant were added to assist the governor in the multifarious details connected with the administration of this large and growing institution. The number of officers has remained stationary since these inspections began in 1883, but the number of members has more than doubled, and is constantly increasing, and the value and importance of the plant has correspondingly increased.

The average number present during the past year was 832; and 504, or about 38 per cent of the total membership, was constantly absent, including 415 members on outdoor relief. The system of outdoor relief practiced at this Home seems to be one of its commendable features, and has the double advantage of pleasing the beneficiaries and of effecting a large annual saving, the relief paid averaging only about half of what it costs to maintain a member at the Home. The Volunteer Homes do not bestow much outdoor relief, though they are authorized to give it.

The discipline seems to have greatly improved during the year, and a decrease is noted in the number of both offenders and offenses. But even among these diminished offenses the desire for liquor continues to be the principal cause of most derelictions. In the Army and at the Volunteer Homes post exchanges are generally in favor, but such an institution has never been tried here. It would doubtless, as elsewhere, conduce to the comfort, economy, and good behavior of those who benefit from it.

The books, accounts, and disbursements of the treasurer, covering the period from July 15, 1899, to June 30, 1900, were inspected and appeared to be correctly and neatly kept, though it was noted that apparently two sets of books are being kept, and the usual fiscal year ignored. Under present methods of disbursing the pension fund the treasurer is compelled to carry large balances from month to month, remaining unpaid in his hands, and averaging over $47,000. Some of this money belongs to members in the insane asylum. Would it not be better to allow this to drift into the permanent fund where it seems equally secure?

The condition of the permanent fund is shown in the following table:

| | |
|---|---|
| Balance October 1, 1899 | $2,582,016.81 |
| Credit settlement | 228,724.87 |
| Total | 2,810,741.68 |
| Drawn for current expenses | 254,000.00 |
| Balance June 30, 1900 | 2,556,741.68 |

This balance is lower than reported for several years past, which seems to be due to delayed credit settlements and to a greater withdrawal for current expenses on account of extensive permanent improvements, though the amount involved in the credit settlements have greatly increased in the past nine months. The improvements may also account for the large increase in the number of civilian employees during the year.

Considerable attention has been given to farming and dairying, but it is questionable whether attempts of this nature, except by professionals, are sufficiently remunerative to warrant their continuance. It is difficult for whatever luxury there is about them to reach every member of the home equally. At the volunteer homes they have generally fallen into disfavor, and the herd at this Home was killed in 1893 on account of tubercular infection, though its economy or propriety had already been questioned. The present herd, of which the nucleus was formed in 1897, numbered at date of inspection 59 animals, and the value of the milk yielded during the year just about equaled the cost of maintaining them, according to the figures reported by the home. Would it not be better to limit its use wholly to the hospital?

The sanitary condition of the home seems excellent; and the hospital has been thoroughly refitted with the most modern appliances, including X-ray and sterilizing rooms, and provided with a very satisfactory dining-room service, and seems at present well equipped to take care of the sick. The average daily number of patients was 81.7 in hospital and 8.6 at sick call, and a total of 3,651 received medical treatment during the year. The number of deaths was 78, giving a death rate of 58.38 per 1,000 of the average present and absent. This seems high compared with the volunteer homes, but nearly 50 per cent of the deaths occurred outside and are included in the death rate. The surgeon was absent in Europe at the time of inspection. A monthly sanitary inspection and report to the board by him on the sanitary condition and requirements of the whole home in all its parts, as is done at our military posts, seems desirable here.

The fine condition of the home and the excellent care given the members reflects great credit upon the officers; and the fine spirit in which matters are run and the system of improvements inaugurated mark the present administration.

## UNITED STATES MILITARY ACADEMY.

An inspection of this admirable institution was made by the Inspector-General, commencing May 14, 1900, the first inspection by an officer of the Inspector-General's Department since October, 1897.

It was understood that no matter affecting the curriculum was to be inquired into during this inspection, and these restrictions were observed. The usual effort to see at least a sample of every person, thing, place, disbursement, or duty there accessible during inspection was faithfully made.

If general inspections are to continue in the Army, the cadet should be familiar with it as in times past; and if it were as free and full as possible, only additional commendations would be won for the work being done and warm admiration for the perfection of much of it and equal encouragement offered for the highest improvement of all matters that attract attention.

The condition of the post and Academy and of the several departments connected therewith and the progressive spirit at present prevailing bear witness to the efficient and wise administration and the enthusiasm for their work of the superintendent, Col. A. L. Mills, the commandant of cadets, Lieut. Col. O. L. Hein, and the corps of officers and instructors. It is an institution which habitually wins commendation and exacts unfaltering attention to duty. It lives upon a high plane, and its tone is true.

The aim and purpose of the Academy are well understood, and theoretical and scientific instruction is happily blended with practical work so as to enable the cadet upon leaving the Academy to discharge at once the full duties of his chosen career in all its ramifications. The course of study has been constantly improving, and the graduates are better equipped to assume the functions and responsibilities of their profession than ever before in the history of the institution. All the changes made seem in the right direction and tend to encourage the cadet, give him an opportunity to bring out his best qualities as an officer, and teach him confidence and reliance.

The introduction of well-considered innovations is calculated to prevent stagnation, which is one of the greatest evils to be dreaded in military life.

Minor matters.

The time approaches when one or two additional professors will be needed. Electric-lighting plant seems indispensable, and much better light in cadet barracks and nearer to the book for studying; two of the docks are in bad condition; a modern battery for use in the instruction of the cadets, complete in all its details and furnished with all modern appliances, should be provided; an additional magazine for storing filled shells, rockets, primers, and fixed ammunition needed; some provision should be made for stabling the horses of officers; it may be advisable to restore old Fort Putnam, from an historical interest; old wooden fences should be replaced by iron ones; quarters for officers insufficient.

It is suggested that a board of officers be appointed to consider the subject of the probable enlargement of the post and to submit a plan on which future improvements can be made so as to obviate all hap-hazard locations and patchwork. Some of the present buildings are inconveniently located or have been added to from time to time, which could have been avoided had such a plan been in existence.

A full report may be found in Appendix C.

## MILITARY COLLEGES.

This is the first year since the mobilization of the regular and volunteer forces for the short but decisive campaign against Spain and the subsequent occupation of our new possessions that a general systematic inspection of the military departments of institutions of learning having an Army detail or Government arms and equipments has been made. The causes that operated against these inspections in the past two years are well understood. In the spring of 1898 all active officers serving as professors of military science and tactics were withdrawn, as the country needed them for the more exacting and the highest duties of their profession, and the unsettled conditions after the cessation of hostilities with Spain in Cuba and our new possessions, and lately also in China, continue to retard their return to college duty. But it is believed, however seriously the institutions suffered, that they have generally recognized and accepted the demands of the Government in a loyal spirit and used every effort to continue military instruction on the system gradually developed during past experience or on the plans instituted by the military professors. Possibly the detail of retired officers had not been generally favored before by the colleges, and there were only five on such duty when the active officers were recalled during the first stages of preparing for the Spanish campaign; but within the past year they have been in greater demand, and their details were gradually augmented until there were 30 when these inspections began, and at present there are 43, representing every rank from lieutenant to colonel. It is very desirable and sincerely hoped that the War Department may succeed in providing each of the 110 institutions having Government arms and equipments with a capable and acceptable military instructor. Much of this military instruction, so fairly distributed throughout the country, was instituted amid the severest strain of war; and any patriotic citizen who appreciates all that war demands when our young men are called to arms may well rejoice at whatever superiority may be reached in the faithful and efficient instruction for this duty in readiness for our country's call to arms, military duty involves human lives and ignorance aids no one in its performance.

Inspections.

Under the instructions issued this year, 67 colleges were visited by officers of the Inspector-General's Department and 24 by officers specially detailed for the purpose. Thirty of these visits were made to colleges having a detail of a retired officer, and contemplated an inspection of their military departments, and 61 contemplated an inspection of the Government arms and equipments only; but it seems significant that the inspections at quite a number of colleges having no detail included, by special request of the college authorities, the entire corps of cadets. Thus, 7,311 cadets at 52 colleges, or an average of 140 per college, were inspected in ranks. How fine a body of young men the greater part of these presented and, despite disadvantages, how many improved these military opportunities, need not be said. How much the instruction and practice offered may be improved has been demonstrated again by experience in war. Inspections are frequently asked for, and it is generally conceded that they have a most salutary effect upon the military departments; they not only inspire to better efforts and effect remedies of existing defects, but they impart a feeling of national importance, give renewed life and interest, and are generally looked forward to with interest and pleasure by both college authorities and students as one of the principal events of the school year. The connection of the War Department with these colleges dates back to July 28, 1866, when the detail of army officers as military instructors was first legalized; and of this Bureau to 1886, when these inspections were first ordered. It may be a mere coincidence, but nevertheless it is noticeable that these inspections were followed by a large increase of both army details and students under military instruction, and possibly by improvements in the extent and excellence of the military knowledge and proficiency. Since they began, the details have more than doubled and the attendance about quadrupled, until just previous to the Spanish war, when there were over 100 officers detailed as military instructors and over 18,000 students enrolled in the military departments, and the conditions were more satisfactory in every respect than ever before and a progressive spirit and fine enthusiasm had developed in many points.

Some of these colleges may afford an illustration of the value of inspections, and it is a pleasure to see their military feature hopefully resumed. Now that experienced inspectors again show the interest of the War Department, it is felt improvements are sure to follow; and it is firmly expected that nothing but good will flow from a continuance of the best attainable military branches at these institutions and of these annual inspections of colleges. If our civil and military authorities desire the very best, it is difficult not to believe the best is attainable. And the future promises to make them very much more needed than the past.

Students.

With so many colleges without any army detail, it was hardly expected that the reports showing the operations of the military departments during the past year would be as full or complete as they were formerly. In many instances no records whatever were kept, and it is therefore not possible to present complete statistics on the subject.

From the reports received it appears that at 76 colleges 30,125 students matriculated during the year, giving an average number of 396 matriculants per school, which is an increase of six over the number reported in 1897, when these reports were last made. Over 90 per cent of these students were over 14 years of age. At 76 colleges the military departments report an enrolled strength of 16,244 cadets, and at 82 an average of 14,389 cadets under military instruction, giving for each military department an enrollment of 214 and an average attendance of 175 cadets during the year. The average age of these cadets was about 18 years, and ranged between 12 and 23. Information is given in greater detail in Appendix D, to which attention is invited. Only 13 colleges out of over 100 are definitely known to have discontinued military instruction upon the withdrawal of the army officer, and several of these are now making arrangements for a resumption of this work.

The military organizations of the cadets are similar to those in the the army. The infantry company is the unit, and regiments and battalions have been organized where the number of companies is sufficient for that purpose. Among the 74 colleges reporting on the subject, there were 5 regiments, 56 battalions, and 228 companies. In addition there were also reported a number of detachments, such as artillery, cavalry, signal, bicycle, etc., which are formed for purposes of instruction, though usually composed of members belonging to the regular infantry organizations. The strength, on the day reported, of the military organizations heard from is shown in the following table, to which a statement of the conditions in 1897, when military instruction was at its height has been added, so the two years can be readily compared:

| Year. | Colleges reporting. | Organizations. | | | Strength. | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|
| | | | | | Field and staff. | | Line. | | | | |
| | | Regiments. | Battalions. | Companies. | Officers. | Noncommissioned officers and band. | Officers. | Noncommissioned officers and privates. | Total. | Average per college. | Average per company. |
| 1897.... | 101 | 4 | 92 | 301 | 226 | 963 | 896 | 11,471 | 13,556 | 135 | 45 |
| 1900.... | 74 | 5 | 56 | 228 | 207 | 830 | 667 | 9,350 | 11,054 | 149 | 48 |

This table speaks well for 1900, and may serve to indicate how firmly the military feature has been embedded in some of these colleges. Judging from numerous reports and letters on file in this office, military instruction is held in high esteem by the authorities, and where it has once been introduced and given a fair test it is seldom permitted to retrograde. Perhaps the wave of military enthusiasm that swept over the country two years ago and left its impression upon these colleges may account in part for the increase in the average strength of these military organizations.

The discipline of the cadets has been generally good, though in several instances deterioration and laxity of methods have been reported; due, it seems, to the absence of a regular military instructor. At 22 colleges the discipline was reported purely military, at 10 civil, and at 41 a mixture of the two. It is the concurrent opinion of inspecting officers that the best discipline from a military point prevails at colleges where all the students are under military instruction and constantly under military restraint, and where they practice marching formations for however short a time on all occasions of assemblage. Though this practice may be wholly feasible only at such institutions as furnish board and quarters for a considerable percentage of their students, some suggestions concerning quartermaster as well as ordnance supplies and additional rewards or recognition have been received.

**Instruction.**

Under the provision of General Orders, No. 70, Headquarters of the Army, December 11, 1897, which are the latest regulations in force governing the course of instruction and other matters, such as detail of officers, issue of arms, etc., at least two hours per week must be devoted to practical and one hour per week to theoretical instruction, and as a rule this minimum requirement has been faithfully observed when possible, even where no army detail has been furnished, and some institutions give much more. The maximum number of hours devoted to military work during the past school year of about forty weeks was reported as two hundred and forty for the theoretical and five hundred and forty for the practical course. The latter is made the more important at the great majority of the colleges, though at a limited number considerable stress is laid upon the theoretical course. The best results seem to be accomplished where proper credit is given for military instruction, and where proficiency in the elementary theory and practice of military science and tactics is made necessary for a diploma.

Major E. L. Huggins, inspector-general Department of the Lakes, reports:

> The highest efficiency is attained at the strictly military schools, and all possible encouragement should be given them. I am of the opinion, however, that even at those institutions where the minimum results are obtained, these results are such as to warrant the continuance of the aid now given by the Government.

The following table exhibits some of the exercises held at these colleges during the past year and in 1897:

| Military exercises. | Number of institutions at which held. | |
|---|---|---|
| | 1897. | 1900. |
| Number of colleges reporting | 101 | 80 |
| Infantry drills | 101 | 69 |
| Competitive drills | 60 | 42 |
| Signal drills | 62 | 35 |
| Dress parades | 80 | 60 |
| Street parades | 61 | 51 |
| Guards: | | |
| Mounted and maintained | 38 | 35 |
| Mounted for instruction | 13 | 3 |
| Officer of day detailed | 61 | 52 |
| Encampments held | 16 | 18 |
| Practice marches | 23 | 26 |
| Problems in minor tactics | 43 | 19 |
| Target practice | 53 | 35 |
| Position and aiming drills | 52 | 21 |
| Gallery practice | 26 | 11 |

This table is not intended to exhibit all the practical work done during the year, but will aid in illustrating how well these exercises have continued without the supervision of an army officer. Problems in minor tactics have been largely omitted, and the cause of this omission may not be far to seek; but an increase is noted in practice marches and encampments, which usually furnish excellent opportunity for a practical demonstration of the instruction given during the year.

Theoretical instruction has been confined mostly to lectures and recitations in Drill Regulations and Guard Manual, the elementary principles of the art of war, and the organization and administration of the Army, and to instruction in the preparation of company reports and returns. How to enlist the interest and catch the minds of the volunteer students for essential and fundamental military knowledge and principles is the highest test of the skill and professional enthusiasm of these temporary detailed instructors. This instruction is principally given to the officers and noncommissioned officers, and at some colleges to the senior class also; but it is not compulsory at all colleges and there are no fixed text-books, so that the final results must show great variations. Evidently it should not be so limited. At 10 colleges the cadets were required to prepare military essays. If every military graduate were capable of caring for a company in the first stages of mobilization or of recognizing the correct principles and requirements of a campaign, it might impose a good deal of tiresome work on the cadets, but would prove a boon to the community in case of war, when so much ignorance and folly fill the air on a matter of life and death. In a free country the possession of such essential knowledge and military qualities makes marked men in the exigencies of every generation.

Arms and equipments.

The small arms issued to these colleges consist of the caliber .45 Springfield rifles and accompanying accouterments. At the close of the year there were about 110 colleges that had been supplied with these arms in varying quantity, the total amounting to about 16,000 rifles. A few of the colleges had signified their intention of returning their Government property to the Ordnance Department, but were holding it in abeyance pending the result of their endeavors of securing an army detail, and two new colleges were awaiting their first supply.

The property was generally in fair condition and at many of the colleges well cared for; but, of course, such a caliber is obsolete and as a rule needs better attention than it has received in the past. Where a retired enlisted man or old soldier has been employed by the college authorities to look after the Government property it was generally found in excellent condition; but all these rifles are antiquated and do not meet the modern requirements of war and should be replaced by the latest model as soon as the exigencies of the service will permit, in order that the cadets may learn to handle the rifle which they will be compelled to use in the active service of their country. Perhaps some fairer system about this property, both for the Government and the colleges, might be devised, so what is needed can be more readily obtained and accounted for.

The field pieces issued to these colleges are limited to the 3-inch muzzle-loading wrought-iron rifled guns and to the 3.2-inch breech-loading steel field guns. The latter were mostly recalled during the Spanish war and have not yet been generally replaced. The muzzle-loaders are obsolete as a weapon of war, but will serve for firing salutes and for ornamental purposes. Under the act of May 23, 1896—

> The Secretary of War and the Secretary of the Navy are each authorized, in their discretion, to loan or give to soldiers' monument associations, posts of the Grand Army of the Republic, and municipal corporations, condemned ordnance, guns, and cannon balls which may not be needed in the service of either of said Departments. Such loan or gift shall be made subject to rules and regulations covering the same in each Department, and the Government shall be at no expense in connection with any such loan or gift.

This act might very properly be amended to include institutions of learning where military science and tactics are taught, as they are valuable factors in disseminating military instruction and usually have large and handsome grounds for the reception of such old guns and cannon balls. The old muzzle-loaders, for which they are now responsible and heavily bonded, could then be condemned, if necessary, and presented to them. But for purposes of artillery drills, which were held during the past year at 32 colleges, the 3.2-inch breech-loaders and machine guns should be supplied in each case. Much of this condemned ordnance is being rapidly sold, and those wishing samples should take prompt action.

Remarks.

The purpose for which military instruction was extended to every section of our country and made obligatory at all land-grant colleges benefited by the act of July 2, 1862, enacted at a time when this country was engaged in a fierce civil struggle, is well understood. America has definitely determined that the benefits of the education at her Military Academy are of the utmost consequence in the successful conduct of war, and has clearly indicated her policy in the attempt to disseminate certain rudimentary instruction of the first principles and simpler practice of the trade by two parallel streams of legislation—one establishing colleges teaching agriculture and the mechanic arts, including "military tactics," and the other authorizing the detail of more than 100 army and navy officers as professors of military science and tactics at selected colleges having facilities for at least 150 students each and in the aggregate more than 30,000 students and located in every State. How great a part the graduates of these accessory institutions are to play in the wars and military development of our country is left for the future to demonstrate. Information concerning their participation in the Spanish war is meager indeed. The reports from 58 colleges so far received show that they furnished 1,084 commissioned officers and 2,146 enlisted men; or enough partially trained officers for 7 brigades and enough enlisted men for 2 regiments. These figures are suggestive, and rather below than above actual conditions, and if complete returns were at hand from every one of the hundred or more colleges giving military instruction the numbers would perhaps be doubled. For more detailed information attention is invited to Appendix D. One of the large universities alone furnished 2 brigadier-generals, 3 colonels, 5 lieutenant-colonels, 10 majors, 21 captains, and 55 lieutenants; and at one or two, the cadets tendered their services in a body, but not being members of the National Guard they were not accepted. And doubtless had the call for volunteers been larger, or less restricted to selection from the National Guard, a still better showing would have resulted. Many of the graduates and students served as noncommissioned officers and privates because commissions were not within reach. In the profession of arms the test of war is alone accepted as being adequate to prove the quality of the graduates of any institution. Will and enthusiasm were there, and the material furnished was superb; and if these are the results of the system of military instruction it deserves the fullest support of the Government.

Some of the needs of the colleges have been discussed from time to time in former annual reports and may not need repetition here. But the most pressing and immediate necessity seems to be the speedy detail of a sufficient number of capable and enthusiastic army officers to continue the work, which has already proven of great benefit to the Government as well as to the colleges and students, and must add in a large measure to the ultimate security of our people. The Inspector-General's Department is ready and willing to aid and do its fullest share in attaining the best results.

## CONDEMNED PROPERTY.

Any carelessness in disposing of Government property, even by sale and still more by destruction or waste, may occasionally bring profit to individuals, but can not benefit the public service or funds. The clash of public with private interests may render this branch of business more difficult to maintain in the face of insidious opposition; but as the articles inventoried are numbered by the million and originally cost millions of money the duty has a certain importance as long as it is steadfastly sustained. How well it has been sustained by all the abler Secretaries of War is sufficiently illustrated by the results.

The elimination of public property from the service is a special feature of the duties imposed by law and regulations upon the inspection department; but until 1892 it appears that no systematic record was ever regularly kept by the majority of the supply departments of the total amount of public property presented for condemnation, nor of the amount considered fit for further use by the inspector and retained in service, nor of the value of the property thus eliminated or saved in the public service. If they could yet do so for a single decade since 1860 and prior to 1890 it would be very instructive information. The importance of such information and the economy resulting from a prolonged life of the property were early recognized and resulted in the promulgation, on January 29, 1892, of General Orders, No. 8, which required that one copy of each inventory and inspection report be forwarded to this office; and on April 4, 1892, the Commanding General of the Army issued instructions to department commanders requiring that, wherever possible, the original cost of the property inventoried should be given, or, if that be impracticable, the current price. These measures are now covered by Army Regulations and, with the auction-sales' lists, have enabled this office to present fairly accurate and complete information on the subject. If the supply departments could find time or occasion to crystallize similar information, it might be more complete for each, and the economy of the service be further promoted.

The total number of inventory and inspection reports received at this office during the year ending June 30, 1900, was 3,521 against 3,425 for the preceding year, and 1,731 for 1897, and about ten a day or twice as many as formerly. The subdivisions of these inspections are shown in the following table:

| Inspections made by— | Fiscal year 1897. | | Fiscal year 1899. | | Fiscal year 1900. | |
|---|---|---|---|---|---|---|
| | Number. | Per cent. | Number. | Per cent. | Number. | Per cent. |
| Inspectors-general | 1,438 | 83 | 210 | 6 | 417 | 12 |
| Inspectors-general, volunteers | ........ | ........ | 877 | 26 | 584 | 17 |
| Acting inspectors-general | (a) | (a) | 1,013 | 29 | 1,105 | 31 |
| Special inspectors | 293 | 17 | 1,325 | 39 | 1,415 | 40 |
| Total | 1,731 | .......... | 3,425 | .......... | 3,521 | .......... |

a Very few and included among number for inspectors-general.

This table shows an increase in the number of these inspections made by special inspectors, which appears to be due to the exigencies of the service and indicates indirectly pressure of other work and the need of more inspectors-general. There is no branch of inspection work which more clearly subserves economy in the use of public stores, and more greatly needs responsibility and experience and supervision in the business. The orders on the subject are based on purely business principles; and it has been the endeavor of this office to have these inspections made as far as practicable by officers of this department with due regard to an equitable distribution of duties and economy in travel during one of their triennial tours. No other class of officers can perform the duty more efficiently nor economically. The magnitude of this branch of the inspection duties may be indicated by the value and number of articles, including units of weights and measures submitted for condemnation, each of which must be examined by the inspecting officer as required by Army Regulations. It is a wearisome and unpleasant job; but possibly much more than the entire expense of the inspection service is made good by the faithful performance of this duty. The reports received during the past fiscal year show that 54,850,791 articles were inspected, and that of this number 54,134,386 were condemned and 716,405, or 1.3 per cent, retained in service. During the preceding fiscal year, when there were fewer special inspectors, 7,952,911 articles were condemned and 1,427,159, or about 15 per cent, retained in service. How much of this difference was unnecessary loss may not need calculation nor be indicated in the per capita disbursements, but it can hardly be without interest wherever economy is to be subserved. Less than half of the articles presented for condemnation had their original cost price given. Can this be entirely right or desirable? But by applying their value to the other articles, the total inspections of property and stores approximated very closely $8,689,350.88 condemned and $1,320,547.05 retained in service, showing an increase of more than $7,000,000 inspected over the previous year. Reduced to the per capita of an army of 100,000 men, which is about the total enlisted strength of ours, the articles condemned during the year amount to $86 and retained in service to $13 per man.

These figures seem more striking when it is recognized that they are additional to all expendable articles or those eliminated by issue. Though a few millions more or less need not bother, as they merely show the absolute necessity of careful supervision and close scrutiny if the interests of the Government are not to suffer. It may be well to note that the mileage for this whole corps in connection with every form of inspection, during which this is taken incidentally as a minor part, is only about $7,769 and that appropriated for the whole Army $500,000; so the fragment involved in handling these millions of dollars' worth of public property is hardly a perceptible percentage of the total expenditure when offset by the savings or better care effected in property measured by the millions. As this duty may be so easily resisted or ignored, some comprehensive view of its magnitude may better indicate what consideration is due it. Like other branches of our duties, whether prescribed by law or orders, this is neither sought nor shunned by this Department. If it is desired to assign it to others, we have no objection to offer. If it is to remain as a part of our duties, we ask to be given adequate force, free from trammels of other bureaus, and beg to thank the honorable Secretary of War for the considerate support he has extended to this very wearisome and exacting duty.

Attention is invited to Appendix F, which contains a statement showing the total amount and partial value of the property inspected and condemned and retained in service for the past two fiscal years, classified under various headings. The statement shows an especially large increase in the condemnations of property pertaining to arsenals and armories, military posts, and the artillery arms of the service, which appears to be due to the effort made during the year to rid the Army of a large amount of unserviceable and obsolete ordnance and ordnance stores that had been accumulating for years and took up valuable and needed storage space at various places. Recommendations to this effect may be found in annuals from this Bureau. The following was reported in 1897:

> At many posts and arsenals there are quantities of old, useless, and obsolete ordnance and ordnance stores which are a nuisance and a burden to those who have to care for them. It would seem to be good policy to have them condemned and distributed or disposed of.

But an increase, though not so pronounced, is also noted in the condemnations of property pertaining to other departments, except in the case of public animals and of property of volunteer troops, which show a decided decrease; and it is understood some stores were sold or disposed of without such inspection prior to the Judge-Advocate-General rendering the following opinion (indorsement of Sept. 12, 1899):

> The Constitution gives to Congress the "power to dispose of and make all needful rules and regulations respecting the territory or other property belonging to the United States," and it is well settled that no public property can be disposed of without the authority of law, either by an express act of Congress for that purpose or by giving the authority to some department or subordinate agent. Congress has given authority to "cause to be sold any military stores which, *upon proper inspection or survey*, appear to be damaged or unsuitable for the public service" (Sec. 1241, Rev. Stat.); but no authority to sell military stores which have not been condemned as unserviceable, and the sale of the mules in question was therefore illegal.

Generally, the year is marked by an unusual activity in this branch of the inspection service, and there seems to have been a commendable effort to subserve the interests of the Government.

It is greatly regretted that the cost price of all the articles presented for condemnation is not given by the responsible officers, and that it can not be ascertained nor accurately computed in this office on account of the limited clerical force; and approximations, therefore, must be accepted in determining the total value of all the property condemned or retained in service. Lack of clerical force in this office has also stood in the way of ascertaining the normal life of the various articles, which is an important element in the economic administration of affairs and would greatly aid the inspector in determining the most advantageous disposal of the property. With over $1,000,000 worth of property retained in service, representing in dollars and cents the difference of opinion between the inspector and the inspected, it seems the savings effected in this branch of the inspection service alone have paid many times the entire annual cost of maintaining the corps of inspectors. And it is firmly believed that under a more liberal provision of officers and clerks a still better showing can be made. The principal and immediate needs of the inspection department can be expressed in a few words: More regular inspectors and additional competent clerks. This is a simple business proposition by which the employer gains.

Occasionally unserviceable property and stores are disposed of which are not reported to this office, or of which the copy intended for this office is lost, so that the real conditions must exceed the figures reported. For instance, in May last, 2,861 khaki coats and 186 khaki trousers were disposed of in Havana, Cuba, at public auction; but no report has yet reached this office showing that these articles were acted upon by a regularly authorized inspector previous to their elimination from the public service.

Subsistence stores.

Quite a large amount of perishable articles, mostly subsistence stores, amounting in value to over $290,000, was condemned during the year. In some instances the cause of damage was found to be due to defective packing and appeared to be the fault of the contractors; but frequently changes of climate and difficulties of transportation had a very deteriorating effect upon these stores, and some of them had been on hand for more than a year. A list of the principal articles of subsistence stores condemned during the year in the various countries occupied by our troops, and on transports, is shown in Appendix G.

This statement shows the largest condemnations in the Philippine Islands ($113,816.28) and the smallest in Alaska ($112.10), as might be expected from the number and occupation of the troops there, and perhaps from climatic conditions. The condemnations in other places were: United States, $84,814.17; Cuba, $56,492.06; Porto Rico, $16,416.80; Hawaii, $249.42; and on transports, $18,885.25. Fresh vegetables (onions and potatoes) were the only articles condemned at all the places mentioned, amounting in value to over $13,000. The greatest losses occurred in bread, plug tobacco, and bacon, ranging in round figures from $69,000 for bread to $44,000 for bacon, and amounting for these three items alone to over half of the total condemnations reported in subsistence stores. Among the other items the condemnations between $30,000 and $20,000 embraced smoking tobacco and canned tomatoes; between $20,000 and $10,000, flour, fresh vegetables, and beef; and less than $5,000, dried and canned fruits, coffee, cheese, hominy, pork, yeast, crackers, ham, sugar, butter, cigars, vinegar, oatmeal, lard, corn meal, beans, rice, eggs, macaroni, and cigarettes, the last five articles falling below the $1,000 mark each. Some of these articles are in the sales list and some in the issue list; but it is not the desire of the Government to stick the soldiers in the trenches with such losses in either list, as the adopted policy is to equalize the service as far as possible in these matters. These figures are well worth studying, and, it is hoped, may indicate in what direction the attention of officers interested should be centered in order to effect the greatest possible economy at the least discomfort of the soldier. How well this is being done by the supply departments is a theme of praise on all sides.

Public animals.

Under the provisions of paragraph 879, Army Regulations, all public animals must be inventoried singly preliminary to their presentation for the action of an inspector. From the reports received during the year the following table, showing the number of animals inspected, condemned, and retained in service, has been compiled, and a similar table for the preceding year added, so the conditions for the two years may be compared:

| Animals pertaining to— | Fiscal year 1899. | | | Fiscal year 1900. | | |
|---|---|---|---|---|---|---|
| | Inspected. | Condemned. | Retained in service. | Inspected. | Condemned. | Retained in service. |
| Staff | 3,901 | 3,062 | 839 | 883 | 695 | 188 |
| Posts | 43 | 42 | 1 | 78 | 71 | 7 |
| Cavalry | 1,761 | 1,522 | 239 | 1,227 | 1,111 | 116 |
| Artillery | 150 | 133 | 17 | 237 | 181 | 56 |
| Infantry | 61 | 54 | 7 | 294 | 288 | 6 |
| Volunteer organizations | 821 | 765 | 56 | 29 | 1 | 28 |
| Total | 6,737 | 5,578 | 1,159 | 2,748 | 2,347 | 401 |

The large decrease in the number of animals presented for condemnation during 1900 appears to be due to the return of more stable conditions affecting the Army which, in 1899, experienced many and rapid changes incident to the Spanish war. The money value of the animals inspected during the past year aggregated $160,675 for 1,436, whose cost price was definitely given. This is about 52 per cent of the total number inspected, and gives an average cost of about $112 per animal. Applying this value to the other 48 per cent, from which the cost was omitted, the total inspections amounted to $307,776, and the value of the animals retained in service to $44,912. In 1899, by a similar method, the average cost per animal was found to be about $103, and the value of those retained in service $119,377, so it seems the Government does not lose by having these inspections made by a disinterested corps of inspectors under one central direction. And while the duty is assigned to us it must continue to be thoroughly performed.

Auction sales.

Some difficulty is experienced in obtaining complete returns of sales of unserviceable property. Occasionally property is recommended to be sold by inspectors of which nothing further is heard in this office, though paragraph 679, Army Regulations, explicitly requires that a copy of the auctioneer's detailed account of the sale will be furnished the Inspector-General. The following statement shows the number of reports received and the amount realized during the past two fiscal years:

| Designation. | Reports received. | | Animals sold. | | Proceeds of sales. | |
|---|---|---|---|---|---|---|
| | 1899. | 1900. | 1899. | 1900. | 1899. | 1900. |
| Quartermaster's Department: | | | | | | |
| Supplies | 179 | 232 | | | $47,198.48 | $26,547.41 |
| Horses | | | 1,747 | 1,009 | 51,109.76 | 34,824.62 |
| Mules | | | [1]1,561 | 263 | 103,458.27 | 8,792.98 |
| Subsistence Department | 16 | 48 | | | 656.14 | 16,032.18 |
| Medical Department | 14 | 18 | | | 106.57 | 1,088.67 |
| Ordnance Department | 1 | 8 | | | 2.00 | 8,501.45 |
| Engineer Department | 19 | 27 | | | 5,017.10 | 4,907.70 |
| Total | 229 | 333 | | | 207,548.32 | 102,695.01 |

[1] Including draft horses.

The total proceeds are about 1.2 per cent of the estimated original cost of all property condemned, though in the case of public animals they reach 12 per cent, and would perhaps be still higher if complete information were at hand. The reports so far received account for the sale of only 1,272 public animals out of 2,347 condemned during the year. The average selling price per animal was about $26, which is 23 per cent of the average purchase price. Comparing the proceeds of sales of the past two years, there has been a total decrease of over 50 per cent in the sales of 1900; though in the Subsistence, Medical, and Ordnance departments an increase is noted.

Decade summary.

A summary of the property inspected since 1892, when copies of these reports first reached this office, is exhibited in Appendix H. This summary shows that during the past eight and one-half years 19,847 inspections, exclusive of public animals, were made, involving over 79,800,000 articles, costing over $20,700,000. Of this amount about 19 per cent, representing over $3,800,000, were retained in service and the remainder condemned to be sold or destroyed.

The average annual amount of property retained in service represents a value of over $450,000.

As to public animals, which must be inventoried singly, 17,296, costing over $2,000,000, were inspected during the same period, and of this number 2,407, valued at $279,711.33, were retained in service and the remainder condemned to be sold or killed.

The amounts involved in these inspections of both animals and articles made since the Spanish war were as large as those made during the preceding six years.

Per capita expenses.

Increased expenses are unavoidable in war, but their magnitude and the necessity for them increase the importance of studying the conditions with the utmost detail, as is doubtless being done by all the supply departments. And it may ultimately be possible to submit some approximate figures in regard not only to the cost per man per day for the past, but also we may divide the disbursements in each bureau by the number of enlisted men to obtain a unit of comparative expenditure, as apparently the cost per capita varies somewhat annually, possibly on account of the exigencies of the service. The cost of the stores which the soldier actually uses, and their transportation, and of the property which has been disposed of otherwise—as by sale, condemnation, or destruction—may be accessible information, at least in part, in the departments which furnish these supplies. For the current year it seems that in one department the increase is almost nil, and in another is several times greater than in the lowest former year. It is believed that this would prove to be most instructive information, which, when properly consolidated for the whole War Department, would long be remembered.

It is sometimes said that each soldier costs the Government in the gross appropriation about $1,000 per annum even in time of peace. Unless more definite and detailed information is given, perhaps this empirical statement, though hardly more than approximately correct, may have to be accepted as final, somewhat regardless of the rapidity of expansion or other modifying causes in times of war; which it certainly ought to be possible to determine approximately for expenditures in the War Department.

The fact presented for consideration is the location and control of existing fluctuations in not only the per capita expenses but also the ratio of expenditure to the aggregate of enlisted men and in the items particularly affecting them. For instance, the soldiers' ration being limited, does not necessarily compel the per capita expense involved to be also regarded as equally limited.

In connection with this subject the following tabulations concerning per capita expenses for subsistence at the various branches of the National Home for Disabled Volunteer Soldiers may be of interest:

| Branch. | Fiscal year. | | | | Average. |
|---|---|---|---|---|---|
| | 1896. | 1897. | 1898. | 1899. | |
| Central | $0.1426 | $0.1427 | $0.1413 | $0.1348 | $0.1403 |
| Northwestern | .1504 | .1450 | .1528 | .1571 | .1514 |
| Eastern | .1650 | .1551 | .1610 | .1559 | .1592 |
| Southern | .16 | .1508 | .1475 | .1451 | .1508 |
| Western | .1488 | .1337 | .1434 | .1343 | .1401 |
| Pacific | .1597 | .1577 | .1698 | .1789 | .1665 |
| Marion | .1530 | .1492 | .1461 | .1436 | .1479 |
| Average | .1533 | .1460 | .1517 | .1478 | .1507 |

*Average cost per pound of the principal articles of the ration at National Home for Disabled Volunteer Soldiers.*

| Article. | 1896. | 1897. | 1898. | 1899. | Average. | Maximum year. | Minimum year. |

### HISTORICAL ITEMS.

At the close of the century some historical allusions may be pardonable.

The high estimation in which the duties of inspection in our Army have habitually been held is indicated in some measure by the rank given the Inspector-General from the formation of the department, in the early years of the Revolutionary war, as well as by the varied and important duties that have always been imposed upon it, and the expression of favorable judgment by the highest authorities, from Washington down till now. Efficient officers of the Army were from the very beginning selected as inspectors. Baron von Steuben, the most famous Inspector-General of the Continental Army, was given the rank of major-general. He had learned war in service under that past master of the art, Frederick the Great. How he found the American Army at Valley Forge undisciplined and tattered, with very limited military instruction and almost without cohesion, but by conscientious and faithful instruction and inspection converted it into a well-disciplined, self-reliant, compact, and mobile force, and thus aided to make American independence possible, is one of the striking features of that winter of suffering so manfully endured. And he not only performed the duties of inspection, but was at times in command of troops (so setting the example to his successors) and rendered valuable service in that capacity at and prior to the siege of Yorktown. After the retirement of von Steuben the Army itself was reduced almost to nonentity. At one period in its existence the American Army was commanded by a captain, who had the additional dignity of being a major by brevet, and the whole "Army" consisted of only 80 men.

When, in 1798, it seemed that war with France was inevitable, and large levies of troops were called out, Alexander Hamilton was commissioned Inspector-General of the new and large army then created, and was given the rank of major-general. His important influence upon the service, and the further improvements he proposed, both as Inspector-General and while in command, seem hardly to have been properly appreciated, and this second tour of duty in the Army hardly recognized.

In 1780 the Continental Congress provided that the inspectors of divisions (with the rank of colonel and lieutenant-colonel) and the sub-inspectors (with the rank of major) were to act under an inspector-general with the rank of major-general assisted by an inspector-general with the rank of brigadier-general.

In Appendix L is submitted an interesting historical sketch of the Inspector-General's Department, prepared some years ago by Gen. J. P. Sanger, and also a roster of the officers who have been at the head of the Inspection Corps from 1778 to the present time. This roster embraces the names of such memorable officers as von Steuben, Hamilton, Pike, Wool, Croghan, Marcy, and Baird.

Since General Sanger's sketch was prepared (1895) the following events may be mentioned relating to the Inspector-General's Department.

Under General Orders, No. 18, Adjutant-General's Office, March 30, 1895, for the sake of economy and efficiency the country was divided into six inspection districts, and the number of acting inspectors-general was reduced from 6 to 1, and the important duty of inspection was directly under the Secretary of War and the Commanding General of the Army, in the same manner that prevailed when inspection was first adopted and organized under Washington, and under which most admirable results have always been obtained. The system of inspection districts was practically abolished by Special Orders, No. 89, Headquarters of the Army, April 16, 1898, when the members of the Inspection Corps were assigned to duty as inspectors-general at the headquarters of the various military departments about the time the department commanders were assigned to duty in the field for the Spanish war.

The act of Congress approved April 22, 1898, provided 1 inspector-general of volunteers with the rank of lieutenant-colonel for each army corps, and 1 inspector-general of volunteers with the rank of major for each division, which gave for the eight army corps 8 lieutenant-colonels and 24 majors for this department, and left inspections of brigades and separate armies unprovided for. Upon the muster out of the volunteer forces soon after the close of the war with Spain, 3 lieutenant-colonels and 6 majors, inspectors-general of United States Volunteers, were retained in the service of the department by the provisions of the act of March 2, 1899; but necessity has led to the detail of acting inspectors-general, of whom there are at present 6 on duty; and there are also 14 officers attached as assistants, etc.

The act of July 7, 1898, made a temporary increase in the Inspector-General's Department of the Army of 1 inspector-general with the rank of colonel, 1 inspector-general with the rank of lieutenant-colonel, and 1 inspector-general with the rank of major; and by the act of March 2, 1899, these were made permanent.

In the war with Spain 4 inspectors-general were given command in the field with increased rank: Brig. Gen. Robert P. Hughes, who has won commendation in the Philippines; Gen. J. P. Sanger, who commanded a division, and has since superintended the Cuban and Porto Rican censuses; Gen. H. W. Lawton, first a brigadier, who won a major-general's stars at El Caney and in the Santiago campaign, and sealed his devotion to his country with his life's blood in the Philippines; and Maj. Gen. J. C. Breckinridge, who, after his return from the expedition to Cuba, was assigned to the command of the separate army at Chickamauga, composed of the First and Third Divisions of the First Corps and the First and Second Divisions of the Third Corps, and other independent brigades and commands of cavalry and artillery and engineers aggregating over 44,000 men.

## NATIONAL PARKS.

In regard to national parks in California, Lieut. Col. M. P. Maus, inspector-general, U. S. Volunteers, Department of California, makes the following report:

> My observations during inspections for two years of the Yosemite National Park and for the current year of the Sequoia National Park have shown that the Government should take measures to control all the lands, roads, etc., in these parks in order to subserve the objects for which they were set apart and enforce the regulations governing them. Many people visit the Yosemite on account of the beauty and grandeur of the scenery and as a place of recreation. The Sequoia Park is not so much visited, as the roads and trails are difficult and it is not so accessible. A road to the Giant Forest, however, at the present time is being constructed under the direction of Captain West, the acting superintendent.

The protection of watersheds is a most important matter in this country, especially where rains do not fall regularly and where there is a dry period for so many months during the year. The reservation by the Government of forest and the employment of rangers to enforce the regulations and to prevent forest fires will in a great measure carry out this object, but the guarding and protecting of the parks themselves, in order to prevent the grazing of cattle and sheep and the destruction of fish and game, is not so easily accomplished. Troops have been employed in both of these parks for this purpose during this year and last. The patrolling has been done this year in the Yosemite much better than last year, when there appeared to be very little effective work done by the troops.

The laws of the State declare it is a misdemeanor to kill deer after the 15th of September, but after that time, when the laws of the State should be enforced, most of the slaughter of game occurs.

I have twice passed through the Yosemite Valley, and through a large portion of the Sequoia Park, and have only seen one deer in all my travel.

In both of these parks considerable land is owned by citizens who naturally claim rights to live on their property and to graze cattle thereon.

By reference to the map of the Yosemite Valley it will be seen that the western range of townships contains most of the land owned by citizens in this park. It is estimated that between forty and fifty thousand acres are thus owned. A good deal of this land is believed to have been taken up, especially the timber claims, after a bill had been introduced in Congress for the formation of the Yosemite National Park. These people evidently expect to make money out of such claims by disposing of them to the Government at high figures. Such claims, if condemned by the Government in the future, should be paid for simply at the actual cost to the holders at the time they were taken up.

In the same way it is noticed that groves of the great sequoia and redwood trees are being purchased, evidently for the sole object of selling them to the Government at an advanced figure.

The best groves of redwoods are already included within these parks, and it would seem that there ought to be sufficient patriotic spirit among the people of California to protect those groves not now owned by the Government.

It is evidently impossible to protect a park when so much land is owned within its limits by private parties who demand the right to live upon their land and to bring their stock upon it.

Herds of cattle are placed upon land when it is evident that there is not enough grass to feed one-half the number, and it is obviously the intention of owners to allow them to graze on the public domain in violation of regulations.

The additional work of bringing herds of cattle into and out of the reservation, which has to be done by the troops, largely increases their work and the difficulty of performing it.

I would suggest that in the Yosemite Valley the western range of townships, above referred to, be eliminated from the park and all land belonging to the Government therein sold, the proceeds therefrom to be used in the purchase of other lands occupied by individuals within the park, or for the improvement of the park.

In the same way in the Sequoia Park, outsiders should be bought out.

Roads in parks.

In the Yosemite Valley none of the roads belong to the Government, and all are toll roads. The main road through the Sequoia Park belongs to the county. This naturally complicates control.

All roads in these parks should be secured by the Government and made free. It is a hardship and inconsistent with the ideas of a national park for those traveling therein to be required to pay tolls which, in some cases, are excessive. The Tioga road in the Yosemite leads through a most attractive portion of the park, and a reasonable amount expended upon it would put it in good condition. This road was built years ago by a mining company, and was operated for a time as a toll road. For years it has fallen into disuse and out of repair, and it is believed, legally, it could be claimed by the Government.

Early steps ought to be taken to secure all of these roads and place them under Government control.

Forest rangers or guards.

It is believed that the employment of a sufficient number of forest rangers or guards would insure better protection to the Yosemite, Sequoia, and General Grant National parks, and at the same time better enforce the regulations governing them, than a detail of troops, as now employed. Six men for the Yosemite and six for the Sequoia and General Grant National parks ought to be sufficient.

These guards should be selected for their fitness, employed for life or good behavior, and paid a reasonable salary. Good men, it is believed, could be obtained for $60 a month.

A few such men, habituated to mountain life, would do more work than an entire troop of cavalry. It would doubtless be much more economical than the employment of troops.

The cost of maintaining troops is considerably increased in these parks, due to the additional cost of forage and the loss of animals worn out in the service while on such duty. Last year 20 horses were condemned by me as unfit for service, that had been used in the Yosemite, and declared by the troop commander to have been worn out on duty there.

### TRANSFER OF GOVERNMENT IN PORTO RICO.

In connection with the inauguration of a civil government in Porto Rico, Lieut. Col. R. B. Harrison, inspector-general, U. S. Volunteers, reports:

The day after my arrival in the department the transfer of the government of the island of Porto Rico from military to civil control took place under the most auspicious circumstances, and amid the plaudits of the people. There was no friction, and the greatest good-will prevailed, and in fact our army officers and enlisted men, who have had much hard work and intricate problems in performing the various civil duties, issuing relief supplies and maintaining order, viewed the change with as much pleasure as the most enthusiastic native desiring self-government.

All agree that the military government has been successful under the most trying conditions, and the work has been done carefully, conscientiously, thoroughly, and effectively, and has set a high standard the world over as a firm, effective, and mild military government. The inauguration of Governor Allen was carried out under the direction of the department commander, General Davis, who has continued in every way possible his interest and efforts to uphold and assist the civil authorities and make the civil government successful.

The native Porto Rican viewed and regarded the change from military to civil government with the greatest indifference, and I was at a loss at first to understand the reason, in view of the fact that it had been so urgently represented to the people of the United States and to Congress that the people of Porto Rico were clamoring for civil government. Their indifference was unmistakably evidence that they appreciated the simple, and mild, yet effective military government of the Americans; that they had begun to love it as giving them all the liberty they desired, and could not appreciate, or had no time for, a change that meant little to them beyond a change in name.

It would be a neglect of my duty if I did not state in closing that the work of the officers and enlisted men of the United States Army, stationed in Porto Rico, in the establishing and carrying out of a military government, the maintenance of law and order, and the establishing of a civil government in Porto Rico has been hard, constant, and exacting. During the past year the officers and soldiers have been called upon to perform more constant and onerous duties than ever before, and the response at all times to the calls of the commanding general of the department or to the local conditions as they arose have been prompt, vigorous, and cheerful, and best illustrates the desire of the American soldier to aid the people of Porto Rico all that lay within their power to improve the conditions of our new acquisition of territory.

### DRY DOCK AT SAN JUAN, P. R.

On this subject Lieut. Col. R. B. Harrrison, inspector-general, U. S. Volunteers, reports:

A dry dock, either built by the War or Navy Department, or jointly built, is most urgently needed in the harbor of San Juan. It is not only needed from a naval and military standpoint, but also to give the many steamers touching at this port the necessary facilities for being cleaned and repaired.

### SPECIAL HEALTH IN PORTO RICO.

Among the results accomplished and the work done by the Army in one of our insular possessions may be noted the connection of the Medical Department in Porto Rico with the superior board of health and the board of charities of this island. It is learned from a pamphlet published by Maj. John Van R. Hoff, chief surgeon, Department of Porto Rico, that during active operations of about six months, in addition to formulating a code of sanitary regulations, prescribing a State examination, and licensing all physicians, dentists, pharmacists, nurses, etc., founding a laboratory for examination of food adulterations, it has organized a vaccine station for the production of vaccine virus, and carried to a successful conclusion the work of vaccinating the entire population.

The following figures recapitulate the work:

| | |
|---|---|
| Number of vaccinations | 742,062 |
| Number of revaccinations | 116,955 |
| Number of charged points produced | 1,024,395 |
| Number of cattle vaccinated | 1,201 |
| Total cost of vaccine production | $24,682.23 |
| Total cost of vaccinating | 18,422.44 |
| Total | 43,104.67 |

The immediate result of this immense labor is said to have crushed out an epidemic of smallpox which was threatening all quarters of the island. The beginning of this work was referred to in my report of a tour of inspection in 1899.

War and pestilence having been successfully met by this energetic board, their attention was turned to the famine which came with the hurricane of August 8, 1899. The recapitulation of the work of the board of charities from September 16, 1899, to January 22, 1900, may be summed up as follows:

| | | |
|---|---|---|
| Average number of people fed each day | | 182,915 |
| Total amount of food issued | pounds | 19,336,839 |

Most of the food was supplied by the Government, and the total cost of the relief work will be something over $1,000,000 expended in food and transportation, with practically no expense for personnel.

Physical examination.

It might be well to adopt the German practice where the entire body of every man is inspected every thirty days by a company officer and a medical officer, careful search being made for any heart lesions, hernia, venereal disorders, skin diseases, eczemas, etc. This is in order that any physical defect may be carefully noted, cared for, and reported that might be concealed by clothing or the improper modesty or willfulness of the enlisted men. Their method of identification of the dead upon the battle field is commended. A descriptive list, written upon parchment with indelible ink, is sewn inside the inner pocket of the coatee, so that each man carries with him his own descriptive list, which can not be destroyed in any way except by fire.

Epidermic annoyances.

Among the minor troubles of tropical service one may hardly hear of prickly heat or Dhobie's itch; and those who serve only elsewhere may easily ignore them. But as some amelioration, if not preventive, of these annoyances was needed, request was made that those serving there might be allowed, under the law of July 28, 1866, to purchase from the public stores such articles as cuticura or Packer's tar or other antiseptic soap, and Mennen's borated talcum toilet powder. Otherwise such articles may not be at all accessible at the out-of-the-way places troops are now stationed in the Tropics, even where steam transportation is used. These items may be interesting as illustrating changed conditions nor be regarded by the natives as essential. The law most considerately authorizes the soldier wherever stationed to buy from the Government with his own money what he needs, so that all, everywhere the Government sends them, are treated fairly alike; and doubtless the administration of the law will continue in a spirit as generous as the law itself.[1]

### A NATIONAL MEMORIAL.

As the centennial in commemoration of the transfer of the National Government to the District of Columbia is approaching, it may be appropriate to invite attention to the lack of adequate artistic outdoor memorials in the national capital of any of those men who did most to establish, preserve, and maintain our country and liberties, except men on horseback, which of course does not indicate a lack of appreciation. The beginning of a new century would seem a fitting time to recognize such distinguished public services, in a manner fittingly commemorative of our country's history in the nineteenth century; and it has been suggested that a memorial arch flanked by a court of honor, would be a suitable form for such a national and imposing work of art, naturally adding to the attractiveness and dignity of the architectural and historical features of our national capital, which now lacks such a feature, though it is familiar in foreign capitals. Some recognition seems also due the heroes of the eighteenth century, who laid the foundation of this great republic; and their last resting place and the battle fields where they fought for independence deserve to be as carefully preserved and legally guarded as those of any other of our wars.

### ANNUAL REPORTS.

The edition of the annual reports of chiefs of bureaus authorized to be printed was limited in 1894 to 1,000 copies. This number is hardly sufficient to meet the many demands for the annual reports of the Inspector-General, the supply of some years being entirely exhausted and of others very low; and it is respectfully recommended that an increase be authorized while there are volunteers in the service. Interest in military affairs has greatly increased in recent years, and an increased demand for these publications is sure to follow. The principal expense in publishing them is attached to the setting up of the type and other preliminary work, and the cost of running off 500 or 1,000 additional copies is extremely small and amply compensated for by a wider distribution, and consequently the better appreciation of the military situation.

### CLERICAL FORCE.

In concluding this report, it affords me special pleasure to invite attention to the faithful, efficient, and satisfactory service rendered by the clerks of this department and bureau. Much of their work requires unceasing application and special ability, with constant watchfulness and prevision, as it relates to all other departments, and frequently it demands extra hours, which are habitually cheerfully given. This work, though so diligently performed, is so quietly done that the aid it gives to economy and regularity and efficiency throughout the service may be depreciated. But some recognition is due them and it is sincerely hoped that the increase submitted in the annual estimate will be granted in order that these deserving clerks may receive some advancement and substantial encouragement for continued good work. The work of some of them has been specially meritorious and beneficial.

---

[1] SEC. 25. *And be it further enacted*, That the office of sutler in the Army and at military posts is hereby abolished, and the Subsistence Department is hereby authorized and required to furnish such articles as may from time to time be designated by the inspectors-general of the Army, and the same to be sold to officers and enlisted men at cost prices; and if not paid for when purchased, a true account thereof shall be kept, and the amount due the Government shall be deducted by the Paymaster at the payment next following such purchase: Provided, That this section shall not go into effect until the first day of July, eighteen hundred and sixty-seven.—(Act of Congress approved July 28, 1866.)

Retirement of clerks.

Many of these valuable public servants have devoted their best years to the public service, and some consideration seems due them when years of constant and faithful application to their work have rendered them helpless and dependent upon others. Their pay is hardly sufficient to acquire a competence in old age, and the deserving can not always be promoted for lack of opportunity. It is believed that the public service would be greatly improved if a small increase were granted deserving clerks every five years, or if they could be retired on some such plan as was proposed in House bill No. 15 of the Fifty-sixth Congress, which contemplated the creation of a retirement fund without expense to the Government. In Europe some of the nations maintain a civil retirement list at their own expense, and in this country some of the more progressive corporations have found it advantageous to adopt similar systems. Surely when the efficiency of the service can be increased by such a considerate plan, and that without expense to the Government, it should receive fair and favorable attention.

Respectfully submitted.

J. C. BRECKINRIDGE,
*Inspector-General.*

The SECRETARY OF WAR.

# APPENDIX A.

## INSPECTIONS UNDER ARMY REGULATIONS 867, 868.

Preamble. A few details, even if tedious, shown during the year's examinations, are presented. It may be stated that these are taken from a dozen different inspecting officers, and the personal equation may in this way be nearly eliminated. But may it not also indicate that the general inspection simply covered the general work of the War Department? Routine reports may appear dull and uninteresting and not adequately indicate the vast change that has occurred in the duties and personnel and stores at the depots, arsenals, hospitals, etc., within this Administration. It has been almost revolutionary, though the vast change in the character, quantities, and demands have been met so quietly and at the same old places that the changes hardly attract much attention or make much impression. Even a comparison of the status then and now might require some effort to submit, and then hardly present a clear conception of the transformation from the time that the only separate hospital was that at Hot Springs, and khaki was not adopted, and transportation was within the continent and the mules were being sold and cost much less, and the Tropics presented no problem to us for we were not in it. How the walls have been spread and the hours been crowded and the multifarious new demands been faithfully, intelligently, patriotically, and adequately met under our old and well-tried system and experience and admirable personnel deserves fairer recognition while the increased volume of business is being honestly and rightly conducted at the same old stand. Though great improvements in many details had already been effected in stores by the influence of such officers as General Holabird, and in the personnel by such as General Kelton; and the militia and National Guard were never so good in a rather sedentary way, though armed with an obsolete weapon; and the individual regular and units of organization were never so well selected, nor better trained, nor possessed of sterner and truer military experience and traditions; still mobilization was wholly unpracticed then, and the handling of men in masses over wide areas, which is the soul of all military operations and the principal feature of European armies and modern military development, was for lack of appropriations becoming a decadent art here.

We were very fortunate in having a considerable number of men experienced in the large events of the civil war. But now matters are reversed, and all the concomitants of war are well provided, and only the expense needs scrutiny. Movements by brigade are familiar and those by division have been attempted, and supplies are abundant and improved, and mules are being purchased; but the old perfect training of the individual soldier and the units of organization need attention, and after two years of semi-war we seem little, if any, nearer to the essential military experience of practice with army corps than before. The principal excellence of an experienced soldier is the familiarity and power of working together most efficiently in masses, and individually this in its simplest elements is the ability to overcome natural obstacles and to take care of himself and the enemy. We ought not to desire our soldiers to be deprived during their advanced preparation of the opportunity for this essential experience and the qualities demanded for the best service in the exigencies of war. Experience has again demonstrated that supplies in the principal essentials for about a quarter of a million of soldiers must be in sight and readily accessible, or the citizen soldiers when called to the colors must suffer unnecessarily at first. In war the question in this matter becomes, Is it better to cost dollars or lives? At times it may seem easier or cheaper to deny or reject than meet this question fairly.

Depots.

The reports of inspection of the depots indicate that the administration of the affairs of these establishments are in the hands of capable, zealous officials, whose management of the business has usually been above reproach and entitled to praise. The steps taken for the protection of property and supplies against fire and theft have generally been reported adequate and satisfactory. This, for fire, consists of steam fire engines, hose, hose reels, steam fire pumps, and fire plugs supplied with water under pressure; and in the case of theft, protection is afforded by guards and watchmen. The buildings, office rooms, and storerooms are generally reported in good condition, suitable, satisfactory, and well arranged. Some minor repairs are required, and ventilation is not satisfactory in all cases. And a constant effort is evident to bring matters to the best attainable condition. At New York the inspector reiterates the recommendation of the previous year in regard to the desirability of constructing warehouses on Governors Island, on account of the large amount of rent paid by the Government for buildings in the city of New York, and states that since the last annual inspection this amount has increased more than $10,000. Storehouses do not have sufficient storage capacity in all cases, and some overcrowding is reported.

In this connection, Lieut. Col. C. H. Heyl, in his report of the last inspection of the quartermaster's depot at Philadelphia, Pa., says:

> Attention is again invited to the fact that articles are sent to this arsenal from military posts which can not be reissued because too much worn or of an obsolete pattern. It would seem to be economy, if they can not be used at the place from which sent, to sell them there and save the expense of transportation. No property should be sent to this arsenal which can not be reissued under an original requisition for supplies.

The required books and records are reported on hand and habitually properly kept. The means of transportation, where required, are generally reported satisfactory, sufficient, and in good condition. Hauling, other than that done by the depot teams, is performed under contract, usually at a stated charge per hundredweight, the rate being regulated by the distance of the haul. The water supply is generally reported satisfactory and sufficient.

The furnishing of supplies to the troops has entailed a great amount of labor upon the depots, especially a large increase in the matter of transportation of passengers, animals, freight, and funds, as well as large additions to construction, purchase, and handling of stores, as compared with the previous year. Nine thousand and ninety-nine

Christmas packages alone were received and shipped at the San Francisco depot.

The number of civilian employees on duty at the several depots is reported sufficient for the proper transaction of the public business, and could not well be reduced without detriment to the service. In some cases, it is reported that the employees have been compelled to work late at night and on Sundays and holidays.

The location of depots is generally reported desirable and convenient, and their affairs in good condition. The buildings are reported in good repair, well adapted to the purpose for which used, and in good police. Electric lights in the Army Building, New York City, are reported needed. Purchases, at least of subsistence, are reported made, as far as practicable, direct from first hands, and they appear to be conducted in accordance with law and regulations. Purchasing commissaries inspect all stores purchased, if practicable, and articles are required to be in accordance with the contract and samples furnished. Subsistence storehouses are generally reported good and sufficient, and the stores properly classified and neatly arranged. The price paid for subsistence stores is reported to compare favorably with the wholesale rates ruling at the time of purchase.

The officers in charge of the medical supply depots seem to possess the necessary executive ability, and are reported as displaying excellent judgment in the performance of their varied duties. The inspector, in his report of inspection of the medical supply depot, San Francisco, Cal., recommends "that a suitable building to accommodate the medical supply depot be rented, and that its offices and storerooms be thus brought together." Promptness appears to have been the rule in furnishing supplies for the troops.

The number of civilian employees on duty at the medical depots range from 26 to 13, and their salaries from $150 to $55 per month.

The medical supply depot, Manila, P. I., was inspected for the first time by an officer of the Inspector-General's Department, on May 23, 1900, by Maj. S. C. Mills, inspector-general. A summary, somewhat in detail, of his report may be of interest.

The depot was established September 28, 1898. At date of inspection it was in charge of 1 surgeon, who was assisted by 1 acting assistant surgeon; and the enlisted force consisted of 1 hospital steward, 3 acting hospital stewards, and 6 hospital corps privates. There were also 4 civilian employees engaged on clerical work, and 6 Chinos and 1 native employed as packers.

The depot is located in the Paco district and adjoins the First Reserve Hospital. There are six buildings which are owned by the Government, one of which is used for offices and the remaining five for storerooms. They were reported in good condition, and protected from theft by sentinels, locks, and bars. For protection from fire, dependence is on the city fire force, which is not considered satisfactory. The storehouses are reported insufficient for the depot needs, and one of them is separated from the others by fully half a mile. The inspector recommends that the stewards' quarters, which are of no particular use, be torn down and the land around them cleared, so as to give an increased river frontage and room for the erection of three storehouses. This would permit of the abandonment of the storehouse at a distance and result in the following advantages, viz:

"Sufficient room, the buildings close together so they could be easily protected, and increased river frontage."

This depot supplies medicines and hospital supplies to the entire archipelago, and pays such bills incidental to the service of the Medical Department as are authorized by the chief surgeon. Since July 1, 1899, to date of inspection, a matter of not quite eleven months, the following business was transacted:

| | | |
|---|---|---|
| Requisitions filled | | 1,500 |
| Vouchers paid | | 1,287 |
| Received on requisitions (about) | tons | 40,000 |
| Supplies received on purchase (about) | do | 25,000 |
| Supplies shipped (about) | do | 60,000 |
| Bills of lading issued | | 1,600 |

During the same period the amount paid for labor is reported as $83,812.20, and the amount paid for supplies $99,478.52, making a total of $183,290.72.

In the matter of transportation of stores from the United States the inspector calls attention to the difficulties experienced, resulting from the failure to supply bills of lading, or packers' lists, which makes an accurate and correct accountability for stores very irksome, and perhaps impossible. The loss of articles in shipment from the United States appears to be a factor of considerable importance. Among a list of such articles reported a few of the more valuable may be mentioned, as follows: Three hundred and seventy-six bottles of brandy, 413 bottles of whisky, 132 bottles of sherry wine, 100 colored quilts, 2 refrigerators, 2 field desks, 2,000 bottles of alcohol, 2,000 tins belladonna plasters, 7,308 bottles quinine sulph. tablets, 7,597 bottles lime chloride, 5,000 suspensory bandages, 2,920 first-aid packets, 10,056 cotton pillow cases, and 13,688 cotton sheets.

The inspector states that the time required to fill a requisition from the United States is about seven months, from start to finish. "With a few minor exceptions supplies have been satisfactory as to quality and condition." In regard to climatic effect, it is reported "that farinaceous substances quickly become infected with vermin and mold. Substances such as silver and potassium iodide quickly decompose. Instruments, hypodermic syringes, etc., need constant care. In the purchase of supplies it is noticed that coal-tar preparations are much cheaper here than at home. The quality of supplies purchased compares favorably with those furnished from home except that pills do not keep as well."

The inspector calls attention to the large number of bunks, field chests, mess chests, chairs, tables, mattresses, cases of instruments, and field and orderly pouches placed on inventory and inspection reports as worn-out in service, many of which are fit subjects for repair, which can not be done on account of the lack of facilities, and he recommends the establishment of repair shops at the depot.

Army and Navy General Hospital.

This institution was inspected November 11, 1899, by Maj. Frank D. Baldwin, acting inspector-general, Department of the Missouri. At date of inspection, the military personnel consisted of the officer commanding the hospital, 2 acting hospital stewards, and 15 enlisted men of the hospital corps; and the civilian force, consisting of superintendent of construction, clerk, messenger, engineer, mechanic, attendants, fireman, laborers, teamster, and matrons, footed up 15 in all. The buildings number 14, some of which are in need of repairs. Water pressure for fire purposes is reported insufficient, and increased steam power is needed.

The hospital provides 15 beds for officers and 60 for enlisted men, and at date of inspection the number of patients was 47; or the well were about two-thirds as many as the sick. The hospital and premises were reported in excellent police, and the supplies of good quality and sufficient for present needs.

General Hospital, San Francisco, Cal. Inspected January 16, 1900, by Lieut. Col. Marion P. Maus, inspector-general, Department of California. At date of inspection, the military personnel consisted of 1 surgeon commanding, 1 assistant quartermaster and commissary, 3 assistant surgeons, 6 acting assistant surgeons, 4 hospital stewards, and 122 hospital corps privates. There were 14 civilian clerks, cooks, laborers, etc., and 39 contract female nurses. The inspector states:

> The personnel of the hospital has been fixed by the Surgeon-General as a commanding officer, executive officer, pathologist, and 10 medical officers for ward and other duty. This number appears to be sufficient, but has never been kept fully supplied on account of the great need of medical officers in the Philippines.
>
> The number of hospital corps men on duty here has varied from 100 to 130, the variations being due to transfer to the Philippines, discharges for disability, or expiration of term of service.
>
> There have been, on an average, 45 female contract nurses at the hospital under the supervision of Mrs. Isabelle E. Cowan, chief nurse. They are reported to have done excellent service and to be a necessity in a permanent hospital like this.

The organization of this hospital dates from December 1, 1898, being a continuation of a general division hospital. The original plans contemplated a hospital building to accommodate 400 patients. As constructed it consists of an administration building, and separate buildings for wards and for male and female nurses. Four of the old wooden barracks and two vacant sets of brick barracks at the Presidio have also been utilized for hospital purposes during the greatest demand.

The 10 wards in the hospital proper will accommodate 388 sick, and the 16 wards in the brick barracks 239 sick, giving a total capacity at date of inspection of 627 patients. The inspector reports that the present capacity is not adequate, that the hospital should be largely increased, and suggests in connection therewith the advisability of selecting a more desirable climate on the Pacific coast for its location, where the climatic conditions were less changeable and cold winds and heavy fogs would not be encountered by invalids fresh from a tropical country.

The number of patients admitted to the hospital during the year is reported as 4,722. They were treated principally for rheumatism, chronic diarrhea, and dysentery originating in the Tropics.

In regard to the general condition of the hospital, the inspector states:

> A careful inspection was made of the hospital in every department. The quartermaster and commissary accounts were carefully verified, and the general conditions as to cleanliness, etc., were observed. The police of the hospital was in every way satisfactory. The ward rooms, beds, dining, mess, and recreation rooms, kitchens, bath rooms, lavatories, etc., were all in excellent condition. The operating rooms, instruments, and supplies were reported complete, and appeared to be in good, serviceable condition in every respect.
>
> The general police of the grounds was as good as could be expected, as improvements were then being carried on and the roads were in bad condition and rendered worse by the recent rains.

First Reserve Hospital, Manila, P. I. This hospital, which had not been previously inspected, was inspected January 25, 1900, by Lieut. Col. E. A. Garlington, inspector-general. At date of inspection the hospital personnel, both military and civil, consisted of 3 commissioned officers, 11 acting assistant surgeons, 6 hospital stewards, 3 acting stewards, 180 privates, 56 females nurses, 24 Chinos, and 98 Filipinos. The Chinos are employed as cooks, bakers, carpenters, and masons, and the maximum rate of pay reported is $70 per month (Mexican currency) for a chief cook. The general average for the Chinos is about $40 per month. The Filipinos are classed as laborers and receive usually $12 per month (Mexican currency). The inspector reports as follows in regard to the location of hospital, buildings, etc.:

This hospital is situated outside the walled city on a plat of ground bounded on the south by Calle Concepcion; on the west by Calle Rosero; on the north by private property; on the east by the depot of the medical purveyor.

The hospital proper, permanent buildings, was constructed as such by the Spanish authorities, and, for this part of the world, I take it to be well adapted for the purpose to the extent of about 300 beds. The capacity was increased by the United States by employing hospital tents. One hundred and fourteen tents are used for ward purposes. There is one ward within the grounds proper of the hospital; the mump and measle ward is within the grounds of the purveyor's depot and the other tent wards are located on a lot across Calle Rosero and are grouped around a building used as a storeroom by the medical purveyor and the Signal Service. In this same lot are 29 hospital tents used as quarters for the Hospital Corps. In the yard of the medical purveyor, immediately in rear of the hospital kitchen, there are 21 tents used for messing purposes by men able to leave the wards and the Hospital Corps. All the tents are floored except the last mentioned and those used for the casual Hospital Corps men; only a very few are framed. The floors are about 1 foot above the ground.

The hospital has 22 distinct wards with a capacity of 70 beds each, each tent having 5 beds; there are 4 attendants during the day and 1 at night to each ward. The tour of duty for a nurse is twelve hours. Each surgeon has 3 wards under his supervision; they are always on duty. One surgeon is detailed as officer of the day, is provided with an office where he must remain when not absent on duty; when so absent his orderly remains at the office.

Each patient is provided with pajamas and the uniform; those leaving the ward for meals are required to wear uniform. Wire-bottom bunks, mattresses, and mosquito bars are provided.

At date of inspection there were 1,039 patients in the hospital. These were being treated principally for malarial fever, intestinal disorders, venereal diseases, typhoid fever, and quite a number for wounds and injuries. The hospital is provided with an isolation ward and with a morgue or dead house. The following are sample bills of fare of both heavy and light diet:

### LIGHT DIET KITCHEN.

*January 25, 1900.*

*Breakfast.*—Corn meal mush, with cream; hot milk, eggs, coffee, toast, chocolate.
*Dinner.*—Escalloped oysters, toast, tea, hot milk, eggs, tomato soup.
*For specials:* Wine jelly, mutton chops, corn starch pudding, chicken custard.
*Supper.*—Boiled rice, with cream; toast, tea, hot milk, eggs, macaroni soup.
*Liquids.*—Beef broth at 9 a. m.; eggnog at 2 p. m.

### HEAVY DIET.

Roast mutton, gravy, sweet rice, milk, boiled potatoes, green peas, bread, butter, sugar, chocolate.

*Supper.*—Roast mutton, gravy, baked potatoes, macaroni and tomatoes, stewed prunes, bread, butter, tea.

*Breakfast.*—Stewed mutton with green peas, fried potatoes, rolled oats and milk, bread, butter, peaches, coffee.

### HEAVY DIET.

*January 23, 1900.*

Fried bacon, baked potatoes, fried corn meal mush with sirup, coffee, bread.

*Dinner.*—Fried chicken and gravy, mashed potatoes with milk and butter, boiled rice and milk (sweetened), cacao, bread and butter.

*Supper.*—Boiled eggs, stewed beans and puree, baked potatoes, stewed prunes, tea, butter and bread.

### LIGHT DIET KITCHEN.

*January 23, 1900.*

*Breakfast.*—Corn meal mush with cream, coffee, chocolate, toast, milk, eggs.

*Dinner.*—Mock turtle soup, toast, ground beef, gravy, baked Irish potatoes, tea, milk, eggs, chicken, chicken broth.

*Supper.*—Cream tomato soup, boiled rice with cream, soft boiled eggs, milk, tea, toast.

*Liquid diets.*—Beef broth at 9 a. m.; eggnog at 2 p. m.

The inspector reports the dispensary in good order and condition and amply provided; that the operating rooms are in good condition, and all needed instruments, etc., are on hand. There is a well-equipped chemical and bacteriological laboratory. The female nurses are reported to be very satisfactory in every respect.

Second Reserve Hospital, Manila, P.I.

This hospital was inspected January 15, 1900, by Maj. S. C. Mills, inspector-general, this being its first inspection by an officer of the Inspector-General's Department. It was established on October 3, 1898, as a convalescent hospital, and shortly afterwards was given its present designation. It occupies the building known as El Colegio de la Asuncion, which was built as a school for girls.

The building is two stories high, with wide porches, high ceilings, good floors, and has considerable open ground about it. It lends itself well to hospital purposes. There are outbuildings which are used as stables, cow sheds, storerooms, dead house, and rooms for native servants.

The commissioned personnel at date of inspection consisted of 1 surgeon, 1 assistant surgeon, and 4 acting assistant surgeons. There were 26 civilian employees used as cooks, assistants to cooks, and for policing the grounds and buildings and care of cows. The patients present numbered 289. Since the organization of the hospital, the total number of cases treated is reported as 5,646, of whom 3,435 were regulars and 2,211 volunteers.

The following are a few extracts from Major Mill's report:

The black belt worn with white uniform is unsightly. In this climate the white canvas shoe is the best foot gear for indoor work. The men of the Hospital Corps prefer them for ward duty, and most of the men have purchased such shoes. As the white uniform is regulation for the Hospital Corps, it should be made complete, and white canvas belts and white canvas shoes of a uniform pattern be issued.

The grounds and outbuildings are well cared for, and were in a fine state of police when inspected.

The hospital as a whole was clean and in a good state of police.

There are ten bath rooms with tile tubs in the building, all of them in good condition.

The dispensary is in good condition and has a full complement of stores on hand. All requisitions are promptly filled by the medical purveyor at Manila.

The operating room is in good condition and fully equipped with instruments and fittings.

The books are correctly and neatly kept.

The female nurses at this hospital are not Government nurses. They are supplied from Auxiliary No. 3 of the Red Cross Association. The nurses are paid, fed, and housed by the association, and are under charge of a head nurse. They are under a six-months' contract which expires in March, when they expect to return to the United States. The commanding officer reports their character and work as excellent. The commanding officer reports the character, habits, and efficiency of his assistants as excellent in every respect.

Supplementary Wards Hospital, Manila, P. I.

Inspected January 18, 1900, by Maj. S. C. Mills, inspector-general, this being its first inspection by an officer of the Inspector-General's Department. The supplementary wards were established on May 18, 1899, for the purpose of providing a place for convalescent patients from the First and Second Reserve Hospitals, which were overcrowded. It was not considered an independent hospital, but as detached wards of the other hospitals. As to location, etc., the inspector states:

> The hospital occupies the building and grounds on the Paseo de Aguadas, known as Cuartel de Infanteria, No 73. This is owned by the United States Government. It covers a space of about 400 by 300 feet, and is well adapted for hospital purposes. There are 5 wards, providing 263 beds. In the arrangements for beds, 56 square feet floor space is allowed to each bed. The buildings are dry, well ventilated, and at time of inspection were immaculately clean.

At date of inspection there were present 1 assistant surgeon and 4 acting assistant surgeons. The patients numbered 244, a majority of whom were receiving treatment for malaria, intestinal troubles, and typhoid fever. Thirty-nine of them were reported as surgical patients.

The following extracts from the inspector's report may be of interest:

> I inspected the hospital-corps men in ranks, the men being taken from their work without warning. They wore white uniforms, campaign hats, and white shoes. The men presented a good appearance. They were drilled in the ordinary movements by fours and in line, and afterwards in litter drill. The drill was good and shows a well-instructed command. There is a great lack of uniformity in the white uniform—three styles of blouses were worn. The commanding officer says it has been impossible to procure a uniform issue of white clothes. The white shoes worn were purchased by the men.
>
> The diet kitchen is in good condition and is well supplied.
>
> The cooking, serving, and quality of food is good, the quantity ample, and the variety is as great as is possible under existing conditions.
>
> The system for reporting, issuing, and overseeing the light diet or special diet is extremely well arranged in all its details. The food of the sick is inspected by the commanding officer each day, by the ward surgeons twice a day, and by officer of day at each meal. All complaints are entered on the officer of day's report. There is an oil stove in each ward for the preparation of food for patients at night.
>
> All requisitions are promptly filled by quartermaster department, subsistence department, and medical purveyor.
>
> The appearance and capability of stewards and hospital-corps men are good.
>
> The commanding officer reports the character and ability of his assistants as very good.

Convalescent Hospital, Corregidor Island, P. I.

This hospital was inspected on February 14, 1900, by Maj. S. C. Mills, inspector-general. It had not been previously inspected by an officer of the Inspector-General's Department. The hospital was established December 21, 1898, and as to location, etc., the inspector states:

> Corregidor Island is at the entrance to the bay of Manila, and is 28 miles from the city. Connection with it is by quartermaster's department boat *New Orleans*, which makes the round trip to Mariveles each day, stopping at the hospital landing en route.
>
> The hospital is established near the Pueblo de San Jose, a village of five or six hundred inhabitants. The site was used by the Spaniards as a naval station, and in establishing the hospital the Spanish buildings were used so far as practicable. The site is an excellent one for a convalescent hospital. It is cooler and has a more bracing air than the city, and patients can be given liberty without being exposed to the temptations of the city.

Most of the buildings of the hospital are located not far from the bay, along the arc of a circle. The officers' ward is situated on the top of a ridge about 100 feet above the rest of the hospital.

The buildings in which the wards are located were constructed for this purpose. They are wood, with corrugated iron roofs, have verandas on all sides, and are very satisfactory. The wards are: Wards 1 and 2, building "A," 50 beds each; building "B," 1 ward, 20 beds; building "C," wards 1 and 2, 40 beds each; officers' ward, 20 beds. The buildings are dry and well ventilated by outside air entering through doors, windows, and cornice ventilators.

At date of inspection the commissioned personnel consisted of 1 surgeon and 2 acting assistant surgeons, and the attendants and patients footed up 50. As in the case of the other hospitals in and around Manila, the prevalent diseases are malaria, diarrhea, and dysentery. Twenty deaths have occurred at the hospital since the date of its establishment, of which one-half resulted from dysentery. The total number of cases treated is reported as 2,305, of whom 1,156 were regulars and 1,149 were volunteers.

The civilian employees numbered 23, and consisted of 2 Chinese cooks and 21 native Filipino laborers. One of the cooks was paid $25 and the other $15 per month (gold), and the Filipino laborers $10 per month (Mexican).

The following are a few extracts from Major Mills' report:

> I inspected the hospital-corps men in their quarters and at their work. They were neat, clean, attentive to duty, and gave every indication of being in a good state of discipline. Their quarters were in excellent condition.
>
> The grounds are policed by the native laborers and the hospital-corps men. The condition of police is excellent everywhere about the grounds. Drainage is provided for by surface ditches, which were clean and well-cared for.
>
> Patients in the officers' ward have their own mess, and there is a comfortable dining room and good kitchen in the officers' ward building. The officers' ward kitchen and dining room were neat and clean, and the food good and well served. Officer patients pay $1 per day, money going to the hospital fund. Civilian patients are taken with the authority of the chief surgeon, and pay 50 cents per day if in regular wards; those in officers' ward pay $1 per day.
>
> The food for the sick is inspected by the commanding officer each day, and by the officer of the day each meal.
>
> The dispensary is in good condition and is well supplied. The present operating room is not satisfactory, but another one is now being fitted up. The needed instruments are on hand.
>
> Requisitions are filled fairly promptly by the medical purveyor at Manila.
>
> The condition of discipline among patients is good. The native village occasionally presents temptation in the way of liquor or overstaying pass. When necessary enlisted patients are tried by summary court.
>
> The books and papers are in good condition.
>
> There is an abundant supply of litters.
>
> There is an officer of the day on duty for twenty-four hours at a time. Ward surgeons make two rounds per day, morning and evening, and visit special cases at such times as are necessary. The commanding officer reports the character and capacity of the assistant surgeons as satisfactory.
>
> The female nurses are regular contract nurses. They are on duty from 7.30 a. m. to 12.30 p. m., and from 2 to 5.30 p. m. Their character is reported good and services satisfactory.
>
> Hospital-corps men are on duty twelve hours at a time; a ward master and two men to each ward by day and two men to each ward by night.
>
> Arms and accouterments of enlisted patients are tagged, stored, and properly cared for. In the event of death, or transfer to the United States of patients, their company commanders are notified that arms and accouterments await their orders.

Armories and arsenals.

These have been inspected during the year, and all matters there are generally reported as in a particularly liberal and gratifying condition. Interest and care in the preservation of Government property is reported as manifested by commanding officers, who are habitually attentive and energetic in the performance of their duties. And obsolete old stores have seldom met with a more serious attempt to be gotten rid of in quantities. They certainly seemed excessive among stores kept on hand, and some of them may be instructive or interesting or decorative at military colleges, museums, or Grand Army posts.

The ordnance detachments are reported in excellent condition as to discipline, instruction, and efficiency, with fine arms and equipments, and properly and neatly uniformed. The men are reported to be conversant with their duties and attentive and energetic in the performance of them.

Quarters for both officers and enlisted men are reported ample and satisfactory, except at the Watertown Arsenal, Mass., where a new barrack building is reported as needed, as the quarters now occupied by the detachment "are very old, lacking in modern conveniences, and entirely too small for the number of men." With one exception, the bathing facilities are reported to be excellent. Guards are reported in satisfactory condition and well instructed.

The public buildings are generally reported in good repair and condition, except, oddly enough, those assigned for the care of the sick. This naturally indicates the exceptional circumstances and limited demand of these commands. The inspector reiterates the recommendation of the previous year that steps be taken to secure an appropriation for the construction of a small hospital at Columbia Arsenal, Tenn., and states:

> A suitable building for hospital purposes has been included in the annual estimates since 1893, ineffectually. There is no provision for the proper treatment or diet of sick men. I am reliably informed that some have been treated and operated upon in private houses in the town of Columbia, Tenn., some have lingered for weeks and months on the sick report in the crowded barrack rooms, and some have been sent away to other military posts to die soon after their arrival.

At the Indianapolis Arsenal, Ind., the usual adverse report is made in regard to accommodations for the sick. A portion of the barrack building there is used for hospital purposes, and the inspector states that "a separate small hospital building is badly needed, and has been estimated for annually since 1891." At the Rock Island Arsenal, Ill., also, the criticism as to buildings is confined to that of the hospital alone, and in connection with this the inspector states:

> The buildings are all in good condition, both as to repair and sanitation, except the hospital, which is an old frame building, utterly unfit for hospital purposes, and not worth repairing. The commanding officer states that an estimate for a new hospital has been submitted annually for the past twenty-five years, but no action has yet been taken by Congress.

Extensive repairs to the buildings at the San Antonio Arsenal, Tex., are reported needed. Some new buildings have been constructed during the year, and the usual repairs have been made. Magazines are reported dry, well ventilated, and in good condition generally.

The food is reported sufficient in quantity and properly prepared and served. The sanitary conditions are generally reported good, and the sewerage satisfactory. The required books and records are reported on hand and generally neatly and correctly kept.

The water supply is not reported adequate in all instances. The apparatus and appliances for extinguishing fires, consisting of steam fire engines, hose carts, hose, fire hydrants, fire buckets, fire extinguishers, and hook and ladder trucks, are reported ample, with two exceptions, and in good condition. The inspector concurs in the suggestion of the commanding officer of the New York Arsenal "that the establishment of a number of pools along the sea wall would be a wise precautionary measure." Ordnance detachments are reported organized for fire purposes, and are frequently exercised in the use of the fire apparatus.

The inspector reports a large quantity of old and obsolete stores on hand at the Benicia Arsenal, Cal., which he thinks it would be to the interest of the Government to sell or otherwise dispose of, as they simply encumber the storerooms and require care which might be dispensed with. A similar accumulation of stores is also reported on hand at the San Antonio Arsenal, Tex., which, the inspector states, are absolutely useless and without value, and should be destroyed.

The following extract from the report of inspection of the Rock Island Arsenal, Ill., as to improvements already made and contemplated there, may be of interest:

> Extensive improvements and developments are now in progress in the power plant and its transmission, and in the shop equipments at this arsenal. For many years power generated by turbines at the water-power dam has been transmitted a distance of 800 or 1,000 feet to the shops by means of wire ropes. This method, as installed, sufficed for the more limited operations of the arsenal as they had been conducted, but with the great call of the Spanish war and the rapid increase in the number of machines, the ropes were not capable of supplying to the shops the entire power required for their operation. Moreover, the turbines—but eight in number and of somewhat antiquated design, developing only about 40 horsepower each—did not generate the entire amount of power now required. To develop the capacities of the arsenal in this direction a change from the wire rope to electrical transmission of power is now in operation. The old turbines have been removed and fourteen, each of which will develop 100 horsepower, will shortly be installed on the Government dam. With these a complete outfit of the necessary shafting and two large 500 kilowatts generators, each providing about 750 horsepower, will be located on the dam and directly connected with the main shaft. On each of the principal lines of shafting in the shops motors are to be installed, so arranged that any one shaft can be operated as desired.
>
> The last Congress appropriated $350,000 for commencing the installation of a small-arms plant at the arsenal, to which the present Congress is adding $509,000 for its completion. Steps are now being taken to prepare three of the shops in the north, or Armory Row, for the reception of the necessary machinery and for the conveniences required for the occupancy of workmen. About $100,000 has already been expended or incurred on contracts for this object. As soon as the money appropriated by the present Congress is available specifications and proposals will be issued for the machinery required, and its installation will probably continue during the coming fall and winter. The plant will be arranged for a capacity of between 200 and 250 small arms per working day of eight hours. In case of emergency this number may be increased to 500 by working two shifts of men daily.
>
> With the ample power generated by the new turbines, the modern method of transmission and application to the point where required, with the development of the present plant for the varied manufactures of the arsenal, and with the addition of the great plant for making small arms, this arsenal, within the next year or so, should be able to fulfill the anticipations of its founders in being not only the great arsenal of the Mississippi Valley but of the entire country.

Sandy Hook proving ground.

The proving ground at Sandy Hook, N. J., was inspected April 23, 1900, by Maj. J. M. K. Davis, assistant to the inspector-general, Department of the East. At date of inspection the commissioned force on duty there consisted of 2 captains and 3 first lieutenants, all of the Ordnance Department, and the enlisted men numbered 66. A force of 84 civilians, consisting mostly of mechanics and laborers, were also on duty. The inspector calls attention to the need of new barracks, the old wooden barracks being badly adapted to the purpose, with porches, steps, and entrances in bad shape. He regards the occupancy of the second floor of a building for quarters by the civilian employees, the first floor of which is used for the storage of valuable ordnance material, as objectionable.

United States powder depots.

The United States powder depots, located one at Dover, N. J., and one at St. Louis, Mo., were inspected during the fiscal year. The locations are reported desirable, with ample facilities for shipping. The magazines, storehouses, offices, etc., are reported in excellent repair and condition, the former being dry and well ventilated. The stores on hand consisted of shot, shell, and powder. The stores fabricated, so far as reported, consisted of cartridges for field, siege, and seacoast guns, and cartridge bags. For use in case of fire, there are fire hydrants located throughout the grounds with hose conveniently placed.

Ordnance depot, Manila, P. I.

This depot was inspected June 11, 1900, by Maj. S. C. Mills, inspector-general. It had not been previously inspected by an officer of the Inspector-General's Department.

The depot is located at the Maestranza Arsenal, within the walled city and adjoining Fort Santiago. Its establishment dates from the Spanish régime, the Ordnance Department succeeding to the plant upon the occupation of the city by the United States forces.

At date of inspection the commissioned personnel consisted of 1 lieutenant-colonel, assisted by 1 captain and 1 first lieutenant, all of the Ordnance Department. The enlisted men on duty at the depot numbered 18, of whom 2 were of the noncommissioned staff, Ordnance Department, 2 artillery sergeants, 12 privates from the artillery, and 2 privates from the infantry arm. These men live with their company organizations in the city, there being no barracks. The civilian force numbered 110, and consists of 6 Americans, 61 Filipinos, and 43 Chinos. The former are employed in clerical capacities, the Filipinos on mechanical work, and the Chinos as laborers. The inspector reports that the paper work at the depot is enormous, owing to the large number of issues and receipts, and that the present clerical force is inadequate.

There are 11 buildings, designated as follows, viz: One set of officers' quarters, 1 building used for officers and the armory shops, 1 machine shop, 1 power plant, 1 artillery storehouse, and 6 storehouses. They are reported in a good state of repair.

The inspector states:

> As regards climatic deterioration, leather, which molds and rots easily, and iron and steel, which rust, are the articles most affected.
>
> Transportation service has been generally satisfactory. There have been some delays in arrivals of articles from the United States.
>
> The shops of the arsenal appear to be in good condition, and much work is done in repairing and refitting arms and equipments.
>
> The recent orders in regard to turning in worn rifles to be rebrowned, or otherwise put in shape, is satisfactory in its workings.

United States Penitentiary, Fort Leavenworth, Kans.

Inspected by Lieut. Col. Frank D. Baldwin, acting inspector-general, Department of the Missouri, August 3, 1899. At date of inspection there were 39 prisoners in confinement, 22 of whom came from the regulars, 15 from the volunteers, and 2 civilians—an employee of the quartermaster's department and a retainer. Among the offenses for which the prisoners were convicted and confined, murder heads the list, and 8 of them are serving life sentences for this crime, and one other has a term of ninety-nine years for the same offense. Eight were convicted for larceny and desertion, and the same number for assault. Five are serving sentences for manslaughter, the terms ranging from five to fifteen years. The shortest term noted is one year, for larceny.

The inspector reports that the behavior of the military prisoners compares favorably with that of any of the others, and that they are studious and make every effort to receive credit for good-time conduct. The prisoners are reported as looking well, and seem to be in good health and receive good treatment.

Apache prisoners of war.

The Apache prisoners of war at Fort Sill, Okla., were inspected in August, 1899, by Lieut. Col. Frank D. Baldwin, acting inspector-general Department of the Missouri. At date of inspection they numbered 279, as follows: Males, 130; females, 149. Of the males 66 are designated as men, and of the remainder 23 are over and 41 under 12 years of age. Of the females, 98 are classed as women, and of the remainder 6 are over and 45 under 12 years of age.

These Indians had quite a respectable herd of cattle on hand, numbering 1,898 in all. During a conversation between the inspector and the celebrated chief Geronimo the latter expressed anxiety about his children in Mexico, and said he would like to go back there. The inspector reports that he visited some of the camps of these Indians and found them all in houses, with indications of prosperity and improvement everywhere about their surroundings. He does not think that the old Indians will ever get over their yearning to return to their old country, but that the younger Indians seem to be well satisfied at Fort Sill, and that no one who knew of their condition before they went there and their present condition can advocate their being returned.

Prison at the Cuartel de España, Manila, P. I.

This prison was inspected in April, 1900, by Maj. S. C. Mills, inspector-general. As to its establishment and purpose the inspector states:

> This prison was established by the provost-marshal-general, and receives enlisted men arrested by the provost guard on charges which will bring them before general courts-martial, prisoners from the general hospitals, and from the Signal Corps. It receives from commands near the city some prisoners who are serving sentences or prisoners who are awaiting trial.

There were 80 prisoners at the inspection. Fifty-nine of these were awaiting trial, 19 were awaiting sentence, 1 had surrendered as a deserter, and the status of the remaining 1 was in question. The inspector calls attention to the fact that some of these prisoners had been in confinement for months awaiting trial. He questions whether men should be confined for five months before they are tried, and should have to wait seven months before knowing the result of their trials. It is reported that there are no facilities for working the prisoners, this being a guardhouse rather than a prison, and that it is not practicable to enforce the established rules of prison discipline. The requirements of Army Regulation 907 can not be observed.

The prison rooms were reported in good police, but crowded, the kitchen in good shape, and sinks in good condition and properly attended to. Facilities for bathing were good.

There is a hospital in connection with this prison, which, in addition to accommodating the sick at the Cuartel de España, receives sick prisoners from the military prison at Bilibid and also from the general hospitals. At date of inspection it was in charge of an assistant surgeon, assisted by 1 hospital steward and 12 hospital corps privates.

The hospital contains one ward with 14 beds, and at inspection there were 14 patients in hospital and 5 in quarters. The hospital was reported in excellent condition in every way.

Bilibid military prison.

The United States military prison, Bilibid, Manila, P. I., was inspected May 22–23, 1900, by Maj. S. C. Mills, inspector-general. This, under Spanish régime, was the general prison of the islands, and was continued under charge of the provost-marshal-general of Manila after the occupation of the city by the United States troops. General Orders, No. 26, Headquarters Department of the Pacific and Eighth Army Corps, dated October 31, 1898, directed that the building known as the women's ward of the Bilibid prison of Manila be set aside as a military prison for the confinement of all duly sentenced "general prisoners" of the command, and of all "garrison prisoners" belonging to military commands serving in Manila and sentenced for a term of two months or more.

At date of inspection there were 175 prisoners in confinement. Twenty-five of these were "general prisoners" and 150 "garrison prisoners." The number of prisoners handled at this institution from June 30, 1899—including the number in confinement on that date—up to May 22, 1900, the date of inspection, which covers a period of not quite eleven months, may be stated as follows:

BILIBID MILITARY PRISON.

*Number of prisoners handled from June 30, 1899, to May 22, 1900.*

| Gain. | Prisoners. | | Loss. | Prisoners. | |
|---|---|---|---|---|---|
| | General. | Garrison. | | General. | Garrison. |
| In confinement June 30, 1899 | 46 | 49 | Transferred to Department of California | 628 | ........ |
| Received since | 680 | 339 | Escaped | 1 | ........ |
| | | | Discharged and deported | 18 | ........ |
| | | | Released | 47 | 238 |
| | | | Transferred to garrison prison | 6 | ........ |
| | | | Transferred to Fort Leavenworth, Kans | 1 | ........ |
| Total | 726 | 388 | Total | 701 | 238 |

As will be observed, this shows a total of 1,114 prisoners handled for the period of about eleven months.

The terms for which sentenced of the general prisoners range from three months to life. One is sentenced for life, 2 for ten years, and the terms of the remaining 22 are five years or under, the majority being but for one year.

The prison was commanded by a major of infantry, assisted by a captain of United States Volunteers. Three sergeants from the provost guard are detailed for duty at the prison and used as overseers, and one enlisted man as a clerk.

The bathing facilities are reported good. Prisoners are required by orders to bathe twice a week. The sinks were in good condition, and the general police of the barracks and grounds was excellent. The food for prisoners is cooked and served by detailed prisoners. The mess corresponds to the ordinary company mess. The bread, which was fair, is baked at the prison, and the food was well cooked.

The only regular employment of the prisoners is confined to the policing of the buildings and grounds, which does not give enough work for them. The sergeants on duty drill the garrison prisoners three hours per day, Saturdays and Sundays excepted, in the school of the soldier, squad, and company, without arms.

There is a small hospital on the grounds of the Bilibid prison, which was reported in good condition and properly supplied for the treatment of emergency cases and slight cases of sickness for which removal to the regular prison hospital at the Cuartel de España is not necessary. In regard to the general condition, administration, etc., of the prison the inspector states:

> The general condition of the United States military prison at Bilibid is excellent. The administration conforms as closely as practicable to the established rules of prison discipline, and care, skill, and ability are shown in its management. It is, however, a makeshift, and has certain marked disadvantages. The most serious is that of lack of steady work for the prisoners; they are now having a much easier time, from a physical point of view, than the men who are doing duty. It can scarcely be said these men are confined at hard labor.
>
> The mixing of general and garrison prisoners is an evil. The soldier imprisoned for a military dereliction should not be thrown in contact with the men dishonorably discharged for crime. These conditions have been due to the exigencies of the service, but the question of a military prison, which shall be complete and properly equipped to provide the prisoners with work, is one which will require attention.

Recruiting.

Paragraph 825, Army Regulations, as amended by General Orders, No. 41, 1899, prohibiting the enlistment of certain classes of men, appears to be duly observed and strictly complied with. The recruiting rendezvous and 80 per cent of the recruiting stations have been inspected during the year. At the 53 recruiting stations from which reports have been received, there were on duty a total of 47 officers, divided among the three arms as follows: Cavalry, 10; artillery, 6, and infantry, 31. Some of these officers, in addition to performing the duties of their home stations, exercise general supervision over branch stations. The reports indicate that the officers in charge have performed their duties with zeal and energy. It is submitted that, if the law allows it, some of these stations might be filled by retired officers since active officers are so much needed elsewhere. The recruiting details are generally reported competent and efficient. In number they range from 1 to 10 enlisted men, with a general average of less than 4 per station.

The rooms occupied at stations range in number from 1 to 13, with rental charges—which usually include light, heat, and water—ranging from $15.50 per month for 1 room at Montgomery, Ala., to $160 per month for 11 rooms at one of the stations in New York City. The reports from 45 stations show the occupancy of a total of 228 rooms, with a total monthly rental charge of $2,427.33, or $29,127.96 per annum. This indicates an average per room per month of $10.65, or of $647.29 per annum, and $53.94 monthly rental per station. Locations are generally reported central and convenient, and the rooms desirable and satisfactory, with the single exception of the matter of bathing facilities, which are not adequate in all instances, though ample at some places.

Meals for recruiting parties and recruits are habitually furnished under contract at a stated rate per meal or per day. Dividing all the reported day rates by three and thus reducing them to meal rates, the reports indicate a maximum charge per meal of 25 cents and a minimum of 11 cents, with a general average for all the stations of

$21\frac{1}{24}$ cents per meal. The food is habitually reported good and sufficient. As this is habitual for the ration, it can be compared with the raw ration of the Army or Soldiers' Homes.

So far as reported there were 115,137 applications for enlistment. Of this number, 30,204 were accepted and 89,933 were rejected, which indicates that for every applicant accepted a little less than three were rejected. Among a variety of causes of rejection may be mentioned varicocele, impaired vision, intemperance, defective teeth, defective chest, eczema, minors, heart trouble, deafness, rupture, unsatisfactory character, under weight, under size, married, hemorrhoids, lack of education, and general unfitness. As to productiveness, the reports show 8 stations with 50 per cent or more of applicants accepted, as follows, viz: Station at No. 57 East one hundred and twenty-fifth street, New York City, 70 per cent; Dayton, Ohio, 68 per cent; St. Paul, Minn., 65 per cent; Chattanooga, Tenn., 63 per cent; Albany, N. Y., 55 per cent; Grand Rapids, Mich., 54 per cent; Cleveland, Ohio, 53 per cent, and Springfield, Ill., 50 per cent. At 6 stations the number of recruits accepted was 20 per cent or less of the number of applicants, the minimum being 12 per cent. The ratio of native to foreign born recruits is about as 5 to 1, or 84.5 and 15.5 per cent, respectively. This indicates an increase of foreign-born recruits as compared with last year, when the ratio was reported as about 8 to 1. Among the nations represented by the foreign-born recruits are Germany, Ireland, England, Canada, Norway, Sweden, Italy, Russia, Scotland, Austria, France, Denmark, and Finland.

In the matter of age, the reports show that of 26,491 recruits about 75 per cent or 19,776, were between 21 and 30 years of age, and of the remaining one-fourth, 3,953 were minors, 2,543 were between 30 and 40, and 219 were over 40 years old. The reports indicate that almost all occupations are represented by the accepted recruits, though about one-half of all those enlisted were either laborers, farmers, or soldiers, there being about twice as many of the former as of the latter two classes combined.

National cemeteries.

Under the biennial system of inspections, as prescribed in paragraph 867, Army Regulations, about 40 per cent of the national cemeteries were inspected during the fiscal year ended June 30, 1900. The reports show that the superintendents are zealous and energetic in the performance of their duties, and their efficiency and industry is indicated by the generally excellent condition of the roads, walks, drives, shrubbery, and grounds. The inclosures, consisting mostly of stone or brick walls, are generally reported in good condition. In a few cases it is stated that brick walls should be capped with cement in order to protect them from climatic conditions. At Corinth, Miss., the inspector calls attention to the condition of the main approach to the cemetery from the south, which presents anything but a satisfactory appearance. At Jefferson City, Mo., the inspector states that the cemetery fronts the principal driveway of the city, and that the stone wall should be replaced by a suitable and substantial iron fence, in order to permit a view of the beautiful grounds of the cemetery, which are now hidden by the stone wall. Adjoining this cemetery is the city cemetery, which is being improved and beautified by a very handsome fence. At Jefferson Barracks, Mo., it is reported that the cemetery proper is inclosed by a stone wall, but the entrance is inclosed by a board fence, which is unsightly and should be of iron. At Grafton, W. Va, the inspector, Lieut. Col. C. H. Heyl, states that—

> The small gate (3 feet 10 inches) at entrance on north side, which seems to have become the main entrance for the public, owing to its convenience and nearer proximity to the city, is too narrow and should be enlarged. Its present size is reported to be inadequate to meet the demands for passage of crowds on occasions of public gatherings.

The same officer, in his report on the national cemetery at Gettysburg, Pa., states that—

> The capacity of the lodge is said to be inadequate. The rooms are very small and an addition might be made without much expense, which would add much to the comfort and convenience of the occupants. The kitchen, being separated from the house, should be connected by a covered passage; this is especially desirable during winter months.

The graves are generally reported as properly sodded and the gravestones clean. Headstones are needed in a few instances—generally for recent interments. The water supply, which is derived from cisterns, wells, and city waterworks, is not reported adequate in all instances. Connection with the city waterworks is reported as needed and desirable at Grafton, W. Va., Jefferson City, Mo., Keokuk, Iowa, and Little Rock, Ark. At Memphis, Tenn., the inspector reports that the well goes nearly dry in summer, and that a small pumping engine and reservoir are needed.

## APPENDIX B.

### INSPECTION OF TRANSPORTS.

The following inspection of vessels of the army transport service were made by officers of the Inspector-General's Department during the past fiscal year:

| Name. | Where inspected. | Date of inspection. | By whom inspected. |
|---|---|---|---|
| Burnside | New York | Feb. 27, 1900 | Major Davis. |
| Do | Cuba | June 22-28, 1900 | Captain Foltz. |
| Kilpatrick | New York | Nov., 1899 | Major Davis. |
| Do | do | Mar. 10, 1900 | Do. |
| Meade | En route New York to Manila. | Nov. and Dec., 1899. | Major Mills. |
| Do | Manila | Jan. 9, 1900 | Lieutenant-Colonel Garlington. |
| Do | San Francisco | Mar. 16, 1900 | Lieutenant-Colonel Maus. |
| Do | Manila | Apr. 15-16, 1900 | Major West. |
| Newport | En route San Francisco to Manila. | Oct. 21 to Nov. 22, 1899. | Lieutenant-Colonel Garlington. |
| McClellan | En route Santiago to New York. | Nov. 25, 1899 | Lieutenant-Colonel Harrison. |
| Do | Brooklyn | Jan. 23, 1900 | Colonel Vroom. |
| Logan | do | Nov. 18, 1899 | Do. |
| Do | Manila | Jan. 9, 1900 | Major Mills. |
| Do | San Francisco | May 12, 1900 | Lieutenant-Colonel Maus. |
| Columbia | do | Nov. 29, 1899 | Do. |
| Dolny Vostock | do | do | Do. |
| Buford | New York | Jan. 30, 1900 | Major Davis. |
| McPherson | do | do | Do. |
| Do | En route New York to Porto Rico. | Apr., 1900 | Lieutenant-Colonel Harrison. |
| Sedgwick | New York | Feb. 2 and 9, 1900 | Major Davis. |
| Do | Havana | June 25, 1900 | Major Rolfe. |
| Sherman | En route San Francisco to Manila. | Sept. 23 to Oct. 21, 1899. | Major West. |
| Do | Manila | Jan. 11, 1900 | Do. |
| Do | San Francisco | May 12, 1900 | Lieutenant-Colonel Maus. |
| Garonne (horse ship) | Manila | Jan. 17, 1900 | Major Mills. |
| Flintshire (horse ship.) | do | Jan. 24, 1900 | Do. |
| Do | San Francisco | May 10, 1900 | Lieutenant-Colonel Maus. |
| Grant | Manila | Jan. 25-26, 1900 | Major Mills. |
| Do | do | Apr. 30, 1900 | Major West. |
| Do | San Francisco | June 29, 1900 | Lieutenant-Colonel Maus. |

| Name. | Where inspected. | Date of inspection. | By whom inspected. |
|---|---|---|---|
| Warren | Manila | Jan. 23, 1900 | Major West. |
| Do | ...do | Feb. 1, 1900 | Do. |
| Do | San Francisco | Apr. 30, 1900 | Lieutenant-Colonel Maus. |
| Victoria | Manila | Jan. 19, 1900 | Major West. |
| Hancock | ...do | Jan. 10-11, 1900 | Lieutenant-Colonel Garlington. |
| Do | San Francisco | Apr. 12, 1900 | Lieutenant-Colonel Maus. |
| Thomas | Manila | Mar. 28 to Apr. 2, 1900. | Lieutenant-Colonel Garlington. |
| Do | ...do | Apr. 15, 1900 | Major West. |
| Westminster (horse ship). | ...do | Feb. 8, 1900 | Major Mills. |
| Sumner | New York | Mar. 24-29, 1900 | Major Davis. |
| Do | Manila | May 26-28, 1900 | Major Mills. |
| Tartar | ...do | Feb. 10-11, 1900 | Do. |
| Wright | Cuba | Mar. 29-30, 1900 | Colonel Burton. |
| Do | Porto Rico | May 25, 1900 | Lieutenant-Colonel Harrison. |
| Athenian | Manila | Feb. 4, 1900 | Lieutenant-Colonel Garlington. |
| Do | ...do | Mar. 16, 1900 | Major West. |
| Sheridan | ...do | Feb. 21-26, 1900 | Lieutenant-Colonel Garlington. |
| Duke of Fife | ...do | Feb. 3, 1900 | Major West. |
| Pennsylvania | ...do | Feb. 27, 1900 | Do. |
| Do | ...do | May 19, 1900 | Do. |
| Relief (hospital ship) | ...do | Feb. 2, 3, 4, 1900 | Major Mills. |
| Aztec (horse ship) | ...do | Feb. 23, 1900 | Do. |
| Siam | San Francisco | Mar. 9, 1900 | Lieutenant-Colonel Maus. |
| Do | Manila | Mar. 28 to Apr. 2, 1900. | Lieutenant-Colonel Garlington. |
| Ingalls | Havana | Apr. 10, 1900 | Colonel Burton. |
| Port Albert (horse ship). | Manila | Mar. 17, 1900 | Major West. |
| Wyefield | ...do | Mar. 1, 1900 | Major Mills. |
| Conemaugh | ...do | Mar. 30, 1900 | Do. |
| Do | San Francisco | June 29, 1900 | Lieutenant-Colonel Maus. |
| Indiana | Manila | Mar. 31, 1900 | Major Mills. |
| Crook | Havana | June 25, 1900 | Major Rolfe. |
| Do | New York | Apr. 10, 1900 | Major Davis. |
| Do | San Juan, P. R | Apr. 18, 1900 | Major Sharpe. |
| Do | ...do | May 18, 1900 | Lieutenant-Colonel Harrison. |
| Rosecrans | San Francisco | Apr. 3, 1900 | Lieutenant-Colonel Maus. |
| Leelanaw (horse ship). | Manila | Apr. 5, 1900 | Major Mills. |
| Do | San Francisco | June 29, 1900 | Lieutenant-Colonel Maus. |
| Lennox (horse ship) | Manila | Apr. 19, 1900 | Major West. |
| Do | San Francisco | June 29, 1900 | Lieutenant-Colonel Maus. |
| Port Stephens (horse ship). | Manila | May 10, 1900 | Major West. |

From the reports submitted the following comparative data indicates in detail the condition of the vessels owned and chartered by the Government for the use of the Army transport service:

### UNITED STATES TRANSPORTS.

**Age.** Of the transports owned by the Government all were built in foreign countries except the hospital ships *Relief* and *Terry;* the oldest, the *Meade* and *Sedgwick*, being 26 years of age, followed by the *Hancock*, 21 years; *McPherson*, 20 years; *Burnside*, 18 years; *Crook*, 17 years; *McClellan*, 15 years; *Sumner*, 13 years; *Warren*, 11 years; *Buford* and *Kilpatrick*, 10 years; *Grant*, *Logan*, and *Sheridan*, 8 years; *Sherman*, 7 years; *Thomas*, 6 years, and *Relief*, 4 years of age.

**Cost.** The purchase price of the *Grant*, *Logan*, *Sheridan*, *Sherman*, and *Thomas* was $660,000 each; the *Hancock*, $600,000; *Meade*, $400,000; *Buford* and *Kilpatrick*, $350,000; *McPherson*, $250,000; *Crook*, $240,000; *Sedgwick* and *Warren*, $200,000; *McClellan*, $175,000; *Sumner*, $160,594, and *Burnside*, $125,000, a total of $6,350,594, and the cost of refitting and repairing these ships was $6,646,197.93, or a total expenditure of $12,996,791.93.

**Material.** The hulls are constructed of iron and steel, the *Grant*, *Sheridan*, *Sherman*, *Thomas*, *Warren*, *McClellan*, *McPherson*, *Buford*, and *Relief* being steel ships, and the *Logan*, *Meade*, *Burnside*, and *Hancock* have iron hulls.

Dimensions.

The longest of the transports is the *Meade*, her length being 488½ feet and her breadth 44 feet. Next comes the *Hancock*, 475 feet in length; *Sedgwick* and *Thomas*, 465 feet; *Sherman*, 452 feet; *Grant* and *Logan* 445; *Crook*, 435 feet; *McPherson*, 420 feet; *Warren*, 373 feet; *Buford* and *Kilpatrick*, 370 feet; *Sumner*, 361 feet; *McClellan*, 325 feet; *Relief*, 313 feet, and *Burnside*, 295 feet. The *Grant*, *Sherman*, *Sheridan*, and *Logan* have the same width of beam, 49 feet, the *Thomas* being the widest, 52 feet. The width of beam of the other ships is as follows: *Crook*, 47 feet; *Relief*, 46 feet; *Hancock*, 45.5 feet; *Kilpatrick*, 44.2 feet; *Sedgwick*, *Buford*, *Meade*, and *Warren*, 44 feet; *McPherson*, 39½ feet; *McClellan*, 38 feet, and *Burnside*, 36½ feet.

Tonnage.

The *Thomas* has the greatest tonnage, her gross tonnage being 6,000 and net tonnage 4,300. Next in order come the *Sherman*, whose gross tonnage is 5,780 and net tonnage 3,725; *Sheridan*, *Logan*, and *Grant*, 5,590 and 3,604, respectively; *Meade*, 5,560 and 3,072; *Hancock*, 5,305 and 3,356; *Sedgwick*, 4,770 and 2,923; *Crook*, 4,126 and 2,703; *Buford*, 3,721 and 2,383; *McPherson*, 3,699 and 2,277; *McClellan*, 3,500 and 1,827; *Sumner*, 3,458 and 2,182; *Relief*, 3,094 and 1,987; and *Burnside*, 2,194 and 1,405.

Draft.

The *Hancock* has the greatest draft loaded, 28.5 feet, her mean light draft being 19 feet. The *Sherman* has a mean draft loaded of 27 feet, and light 17 feet; the *Thomas* 26 feet 8 inches, and 15 feet, respectively; *Sedgwick*, 26 feet and 22 feet; *Logan*, 25½ feet and 18½ feet; *Sumner*, 24 feet and 20 feet; *Warren*, 24 feet and 18 feet; *Grant*, 23 feet and 15½ feet; *McClellan*, 22 feet and 17 feet; *McPherson*, 22 feet and 16½ feet; *Buford*, 21 feet and 15 feet; *Crook*, 21 feet and 14 feet; *Burnside*, 19 feet 5 inches and 15 feet 6 inches, and *Relief*, 17 feet 5 inches and 11 feet 6 inches.

Ballast.

Iron, water, and stone ballast are used on the different transports, the *Sherman*, *Burnside*, *McClellan*, *Buford*, and *Grant* using both iron and water ballast, and the *Grant* each of the three kinds named, while the *Logan*, *Thomas*, *Crook*, *McPherson*, *Sedgwick*, *Hancock*, and *Kilpatrick* use iron ballast only, and the *Sheridan*, *Sumner*, and *Relief* use water ballast.

Masts.

The masts of the *McClellan* are reported to be weak.

Sails.

The *Sherman*, *Sumner*, *Warren*, *Burnside*, *McClellan*, *McPherson*, *Sedgwick*, *Buford*, *Relief*, and *Hancock* are provided with sails, those on the *Hancock* being used for steadying purposes only.

Steering apparatus.

The steering apparatus on the various transports is reported as being in good order and sufficient, except that on the *McClellan* the steam-steering gear is reported as in poor condition, and on the *McPherson* as insufficient.

Armament.

The armament provided on the various transports is reported as follows: *Logan*, 4 rapid-fire guns; *Meade*, 4 6-pounders; *Sumner*, 3 6-pounders; *Thomas*, 2 6-pounders; *Hancock*, 4 6-pounders; and *Relief*, 50 rifles, caliber .30.

Fittings.

The gangways, companion ladders, towing hawsers, and anchors are reported as sufficient.

Chronometers and compasses.

The transports are reported as being properly supplied with chronometers and compasses, and one additional chronometer is said to be needed on the *Relief*.

Awnings.

The *Logan*, *Sherman*, *Thomas*, *Warren*, *Burnside*, *Crook*, *McPherson*, *Sedgwick*, *Grant*, *Hancock*, and *Kilpatrick* are supplied with full sets of awnings.

Cabins.

The number of cabins on the various transports and their reported capacity are as follows: *Logan*, 41, accommodating 90 first-class and 28 second-class passengers; *Sheridan*, 33, capacity 66; *Sherman*, 32, capacity 60; *Sumner*, 32, capacity 61; *Thomas*, 35 first-class and 13 second-class, capacity 69 first-class and 39 second-class passengers; *Warren*, 18, capacity 36; *Burnside*, 13, capacity 26; *Crook*, 29, capacity 82; *McClellan*, 4, capacity 8; *McPherson*, 32, capacity 74; *Sedgwick*, 35, capacity 63; *Buford*, 13, capacity 26; *Grant*, 34, capacity 71; *Hancock*, 26, capacity 52; *Kilpatrick*, 9, capacity 27.

Capacity for troops.

The reported capacity for troops on the different transports is as follows: *Sheridan*, 1,842; *Grant*, 1,800; *Sherman*, 1,717; *Thomas*, 1,653; *Logan*, 1,620; *Warren*, 1,242; *Meade*, 1,204; *Sedgwick*, 1,200; *Hancock*, 1,060; *Sumner*, 963; *Crook* and *Kilpatrick*, 800; *Buford*, 700; *McPherson*, 600; *Burnside*, 150; *McClellan*, 125; *Relief* (hospital ship), 250 patients.

On 7 of the transports—the *Burnside*, *Crook*, *McClellan*, *McPherson*, *Sedgwick*, *Buford*, and *Kilpatrick*—the troops sleep in hammocks; on 1—the *Thomas*—in bunks; and on 4—the *Logan*, *Sumner*, *Hancock*, and hospital ship *Relief*—in standees.

Life-saving apparatus.

The transports are provided with lifeboats, life rafts, life buoys, and life preservers, and generally with steam launches and other boats for use in emergencies. The total capacity of the boats and rafts is reported as follows: *Sumner*, 1,150; *Logan*, 750; *Sherman*, 670; *Grant*, 650; *Meade*, 625; *Hancock*, 562; *Warren*, 547, and *Relief*, 380.

The *Sheridan* carries the greatest number of life preservers, 2,400; the *Logan*, *Sherman*, and *Thomas*, 2,000 each; *Meade*, 1,940; *Sumner* and *Warren*, 1,500 each; *Sedgwick*, 1,406; *Hancock*, 1,242; *Crook*, 1,200; *McPherson*, 800; *Buford*, 725; *Kilpatrick*, 700; *Burnside*, 490; *Relief*, 400, and *McClellan*, 240.

Fire apparatus.

The means of extinguishing fire on shipboard are by the use of steam pumps, fire extinguishers, hand grenades, and fire buckets, and the transports are reported as well equipped for the purpose. The hose is also reported as sufficient in quantity and in good condition.

Water supply.

The supply of fresh water on the various transports is reported to be sufficient to last from ten to ninety days for the full complement of the vessels. The capacity of the tanks on the *Thomas* is 335,000 gallons; on the *Buford*, 203,000 gallons; on the *Crook* 163,000 gallons; *Sumner*, 109,000 gallons; *Meade*, 60,000 gallons; *Hancock*, 38,000 gallons; *McPherson*, 20,000 gallons; *Sedgwick*, 19,000 gallons; *McClellan*, 18,000 gallons; *Burnside*, 15,000 gallons; *Grant* and *Logan*, 1,200 tons. In addition to this supply the distilling apparatus on each ship is capable of supplying daily fresh water in the following quantities: *Thomas*, 15,000 gallons; *Logan* and *Sedgwick* 10,000 gallons; *Sumner*, 6,000 gallons; *Hancock*, 5,000 gallons; *McPherson*, 4,800 gallons; *McClellan*, 3,600 gallons; *Grant*, 3,000 gallons; *Relief*, 3,000 gallons; *Buford* and *Burnside*, 2,880 gallons; *Kilpatrick*, *Sheridan*, and *Warren*, 2,500 gallons; *Crook*, 2,000 gallons. The distilling apparatus on the *Warren* is reported as insufficient in capacity. Fresh water is carried as ballast on the following ships: *Sherman*, *Sheridan*, *Sumner*, *Logan*, and *Burnside*.

Engineer department.

Eleven of the transports have engines of the triple expansion type, two of the double expansion, and one is fitted with tandem compound engines. The greatest horsepower reported is that of the *Sedgwick*, 3,380, and the least the *Burnside*, 1,300. Ten of the ships have single screws, 5 twin screws, and one is propelled by a double screw.

The maximum and average speed of the transports are reported as follows: *Meade*, 15 and 13⅜ knots; *Hancock*, 15 and 13.2 knots; *Sedgwick*, 14 and 13.5 knots; *Buford*, 12¼ and 11 knots; *Burnside*, 12 and 11 knots; *Relief*, average speed 13 knots; *Warren*, 12.9 knots; *Sheridan*, 12.8 knots; *Grant*, 12 knots; *Logan*, 12 knots; *Sherman*, 11.51 knots; *Sumner*, 10½ knots.

The *Meade* consumes daily 121 tons of coal on the average; the *Grant*, 95 tons; the *Hancock*, 94 tons; *Sedgwick*, 80 to 85 tons; *Sheridan*, 80 tons; *Logan*, 70 tons; *Warren*, 65 tons; *Sherman*, 64.47 tons; *Thomas*, 62 tons; *Crook*, 55 tons; *Relief*, 50 tons; *McPherson*, 49 tons; *Sumner*, 45 tons; *Buford*, 38 tons; *Kilpatrick*, 34 tons; *McClellan*, 30 tons; *Burnside*, 28 tons. The coal capacity and the number of days it will last, under the usual conditions, are given as follows: *Logan*, 1,760 tons, 20 days; *Hancock*, 1,725 tons, 17 days; *Thomas*, 1,308 tons, 21 days; *Crook*, 1,300 tons, 20 days; *Sedgwick*, 1,161 tons, 14 days; *McPherson*, 1,020 tons, 19 days; *Buford*, 990 tons, 17 days; *Sumner*, 900 tons, 14½ days; *Relief*, 850 tons, 20 days; *Burnside*, 700 tons, 20 days; *Kilpatrick*, 681 tons, 20 days; *Sheridan*, 2,700 tons; *Meade*, 1,800 tons; *Sherman*, 1,795 tons; *Grant*, 1,750 tons; *Warren*, 1,358 tons; *McClellan*, 800 tons.

The price of coal per ton purchased en route varied from $4.73 to $8.65 for the *Meade*, $3.80 to $10 for the *Sherman*, and $10.35 to $11.50 for the *Hancock*. The vessels are properly equipped with donkey engines, steam windlasses, and winches.

Ventilation.

The ventilating apparatus in use on the different ships consists of cowls, steam exhaust and electric fans, metallic ducts and wind sails, besides the ordinary use of the doors, windows, and port holes, and is generally reported as of sufficient capacity and in good order. The *McClellan*, *Kilpatrick*, and *Relief* are reported as having no ventilating apparatus.

Messing.

The capacity of the saloon galleys on the different transports varies from 800 on the *Warren* to 50 on the *McClellan*, while on the hospital ship *Relief* 500 persons can be provided for; on the *Thomas*, *Grant*, and *Crook*, 200; *Sheridan*, 180; *McPherson*, *Sedgwick*, and *Logan*, 150; *Hancock*, *Kilpatrick*, and *Sumner*, 100; *Burnside*, 75. The saloon tables are reported as accommodating 92 persons at one time on the *Sedgwick;* 81 on the *Thomas;* 64 on the *Logan;* 60 on the *Sumner;* 56 on the *McPherson;* 54 on the *Hancock;* 50 on the *Crook;* 46 on the *Sherman;* 40 on the *Grant* and *Sheridan;* 30 on the *Warren;* 16 on the *Crook*, *Burnside*, and *McClellan;* 15 on the *Kilpatrick*, and 14 on the *Buford*. The average daily cost per saloon passenger is given as $1.25 on the *Warren*, $1 on the *Sumner* and *Sheridan*, 85 cents on the *Hancock*, and 64.7 cents on the *Relief*.

The capacity of the troop galleys is reported as from 1,500 to 2,000 on the *Sumner;* 1,800 on the *Logan*, *Sheridan*, and *Thomas;* 800 on the *Sherman* and *McPherson;* 500 on the *Sedgwick;* 400 on the *Buford*, and 200 on the *McClellan*. The *Relief* and *Kilpatrick* are not provided with troop galleys. A separate galley is used in preparing food for the crew on seven of the ships, and the average daily cost of messing of crew per man is reported as 50 cents on the *Sumner;* 41.5 cents on the *Hancock;* 37.5 cents on the *Sheridan*, and 37.3 cents on the *Relief*. With but two exceptions there are proper facilities for washing the mess kits.

Bakeries.

The capacity of the bakeries on the several ships are reported as follows: *Thomas*, 6,000 loaves; *Warren*, *Sumner*, *Logan*, and *Grant*, 2,000 loaves; *Sherman*, 1,800 loaves; *Hancock*, 1,500 rations; *Buford*, 1,000 loaves; *Crook*, 1,000 rations; *McPherson*, 600 loaves; *Sedgwick*, 600 pounds; *Kilpatrick*, 500 loaves; *Relief*, 400 loaves; *McClellan*, 150 loaves; *Burnside*, 150 rations.

Cold storage.

The refrigerating apparatus is mainly supplied by the ammonia process on the different vessels, though compressed air and the brine system are also used. The temperature varies from 20° to 40° according to the articles placed in storage. The capacity of the cold storage is reported as 500,000 pounds on the *McClellan;* 400,000 pounds on the *Relief;* 360,000 pounds on the *Thomas;* 210,000 pounds on the *Grant;* 90,000 pounds on the *Warren;* 50,000 pounds on the *Kilpatrick;* 4,500 pounds on the *McPherson;* 273 tons on the *Sherman;* 200 tons on the *Sheridan;* 85 tons on the *Hancock;* 12 tons on the *Sumner;* 19,000 cubic feet on the *Logan;* 1,280 cubic feet on the *Burnside*, and 1,200 cubic feet on the *Crook*.

A separate cold storage is also provided on the *Burnside*, *Crook*, *Grant*, *Kilpatrick*, *Logan*, and *Warren*, with capacities varying from 12 to 100 tons each.

Nine of the transports are supplied with ice machines, and the others carry a supply of ice. The ice machine on the *Thomas* has a capacity of 2 tons daily; *Logan* and *Sumner*, 1 ton; *Meade*, *Relief*, and *Sherman*-half a ton; *Grant*, 1,000 to 1,500 pounds; *Warren*, 1,000 pounds; *Hancock*, 150 to 720 pounds. The *Buford* carries 150 tons of ice; *Kilpatrick*, 60 tons; *McPherson*, 40 tons; *Sedgwick* and *Sheridan*, 35 tons each; *Logan* and *McClellan*, 30 tons; *Burnside*, 17 tons; *Warren*, 15 tons, and *Sumner*, 4 tons.

Electric-light plant.

Fifteen of the transports are reported as having electric-light plants, the number of lights varying with the capacities of the dynamos. On the *Logan* there are 3 dynamos supplying 1,157 lights; on the *Hancock*, 3 dynamos and 1,000 lights; on the *Thomas*, 3 dynamos and 800 lights; *Crook*, 2 dynamos, 430 lights; *Sumner*, 2 dynamos, 425 lights; *Sedgwick*, 2 dynamos, 386 lights; *Buford*, 2 dynamos, 285 lights; *Burnside* and *Kilpatrick*, 2 dynamos and 250 lights; *McClellan*, 1 dynamo and 125 lights. The electric-light plant on the *Kilpatrick* is reported as insufficient in capacity. The *Logan* has 3 searchlights; the *Thomas*, 2, and the *Sumner*, *McClellan*, and *Hancock*, 1 each.

Hospital.

The capacity of the hospitals on the several transports is somewhat limited in comparison with the number of troops carried, and to adequately provide for emergencies hospital ships fitted with the latest appliances for the comfort of the sick have been placed in service where needed. They are not always in the same part of the ship. On the *Relief* 250 patients can be provided for, and there is an operating room, laboratory, and diet kitchen. The hospital on the *Logan* can accommodate 64 patients, the isolation ward 24, and the detention ward 4 patients. There is also an operating room. The diet kitchen is reported as too small for the purpose; but there is no place where it is more important to appreciate how much can be done in a small space than aboard ship. The hospital on the *Grant* accommodates 60 patients, and on the *Sheridan* 56 patients; but there is no operating room or laboratory on either ship. The *Sherman* accommodates 56 patients and is provided with an operating room and isolation ward; the *Thomas*, 54 patients, has an isolation ward holding 12 patients, and a diet kitchen; the *Hancock*, 42 patients and isolation ward, 8; the *Sumner*, 32 patients, isolation ward, 8; has an operating room and diet kitchen, but no laboratory; the steering chains run through the hospital, making it very noisy; the *Warren*, 32 patients, has an isolation ward, but no operating room or laboratory; the *Meade*, 24 patients, with isolation ward and operating room; the *McClellan* and *Sedgwick*, 12 patients each, with isolation wards and diet kitchens; *Buford*, 12 patients; *Kilpatrick*, 10 patients; *Burnside* and *Crook*, 8 patients each, and diet kitchens, and latter with isolation wards; *McPherson*, 8 patients.

Bathing and toilet.

The bathing facilities on the transports consist of both tubs and shower baths, the former generally for the use of the officers, and the latter for the officers, troops, and crew. The number of tubs provided is reported as follows: *Relief*, 10; *Crook*, 6 officers', 1 hospital; *Hancock* and *Sumner*, 6; *Sheridan*, 5; *Sedgwick*, 5 officers'; *Burnside*, 4 officers'; *Warren*, 3; *Sherman* and *Kilpatrick*, 3 officers'; *Buford*, 3 rooms, officers'; *Logan* and *Grant*, 2 officers'; *McPherson*, 2 rooms, officers'; *McClellan*, 1 room, officers. The *Warren* has 31 shower baths; the *Hancock*, 30; the *Sheridan*, 21; *Grant*, *Sherman*, and *Logan*, 14; *Sumner*, 7; *Crook*, 4 for troops and 4 for crew; *McPherson*, 3; *Sedgwick*, 2 troops and 2 crew; *Buford*, 2, crew; *McClellan*, 1, crew. The closet seats are generally reported as sufficient in quantity.

Each stateroom is, as a rule, supplied with a lavatory for toilet purposes, and on many of the ships lavatories are provided for the use of the troops carried. The supply of basins for washing purposes is in most cases reported as ample. There are few features in which there has been a greater improvement than this since these ships came into Government possession, though vast changes have occurred in most.

Employees.

The employees are divided into three departments—deck, engineer, and steward's, with a few additional employees for miscellaneous duties. The following tabulation shows the number of employees on each vessel and monthly pay roll, as far as reported:

| Name of vessel. | Deck department.[1] | Engineer department.[2] | Steward's department.[3] | Other employees.[4] | Monthly pay roll. |
|---|---|---|---|---|---|
| Grant | 53 | 65 | 48 | 2 | [1] $2,395; [2] $3,055; [3] $1,770; [4] $200. |
| Hancock | 52 | 77 | 45 | 8 | [1] $2,318; [2] $3,087; [3] $1,625. |
| Logan | 52 | 62 | 43 | ........ | |
| Sherman | 51 | 68 | 50 | ........ | |
| Meade | 49 | 65 | 43 | ........ | |
| Sheridan | 48 | 69 | 46 | ........ | [1] $2,180; [2] $3,395; [3] $1,815. |
| Sedgwick | 45 | 61 | 39 | ........ | |
| Crook | 44 | 55 | 36 | ........ | |
| Thomas | 44 | 52 | ........ | ........ | |
| Sumner | 43 | 48 | 31 | ........ | |
| Kilpatrick | 43 | 46 | 29 | ........ | |
| Warren | 41 | 55 | 40 | 1 | [1] $1,955; [2] $2,675; [3] $1,640. |
| McPherson | 40 | 45 | 25 | ........ | |
| McClellan | 39 | 39 | 22 | ........ | |
| Burnside | 38 | 28 | 27 | ........ | |
| Relief | 35 | 39 | 15 | 30 | [1] $1,700; [2] $2,100; [3] $710. |
| Buford | 32 | 31 | 21 | ........ | |

The average monthly expenditures of the quartermaster are reported for the *Sheridan* to be $6,194.91; *Relief*, $6,115.95; *Logan*, $5,000, and *Sherman*, $4,924.

Commanding officer's office.

The *Logan*, *Sumner*, and *Thomas* are provided with an office set apart for the use of the commanding officer of the ship.

Prisoners' room.

The *Sumner* has one and the *Hancock* two prisoners' rooms.

Smoking and writing rooms.

Smoking and writing rooms are provided for the use of the passengers on the *Logan*, *Sumner*, and *Thomas*, and a library on the *Sumner* and *Hancock*.

Games.

Games for the amusement of the passengers are reported on the *Logan*, *Meade*, *Sherman*, and *Sumner*.

Treasure chamber.

Four of the transports, the *Sherman*, *Sumner*, *Warren*, and *Hancock*, have treasure chambers.

Laundry facilities.

The *Logan*, *Relief*, and *Thomas* are reported as having excellent laundry facilities, while those on the *Kilpatrick* are reported as poor. There are no facilities for laundry work on the *Sherman*, *Warren*, *Burnside*, *Crook*, *McClellan*, *McPherson*, *Sedgwick*, *Grant*, and *Hancock*.

General condition of vessels.

The *Grant*, *Logan*, and *Sheridan* are reported as in excellent condition; the *Meade* and *McClellan* are said to "roll badly," and the latter's bottom is reported as "foul." In the opinion of the inspectors, the *Logan*, *McClellan*, *Buford*, and *Kilpatrick* were not fit for carrying troops at date of inspection.

Animals.

The *Kilpatrick* has accommodations for 464 animals.

The following suggestions concerning animal transports, secured from an officer having personal experience, are submitted:

MANILA, P. I., *December 26, 1899.*

COLONEL: Referring to your request for a more or less detailed description of the manner of fitting horse ships and of transporting animals, I take pleasure in giving you the following data, which may prove interesting to you in inspecting these ships. I will first point out the salient points which ought to be considered and then enter more particularly into each.

In the order of their importance they are fresh air, plenty of cool, fresh water, facilities for cleanliness, exercise space, stalls, slings and appliances, feeding, and organization of working force.

(1) *Fresh air.*—This can be obtained only by artificial means, if it is intended to carry animals on more than one deck. There are two methods employed—the blower system, by which fresh air is forced into the holds, either by steam fans or electric fans, and the foul air is forced out of the hatches; or the exhaust system, by which foul air is exhausted from the holds, the fresh air finding its way into the holds through the hatches. Neither of these systems worked by itself reaches perfection, as it may occur that the hatches have to be battened down. Air can not be forced into a tight box, nor can it be exhausted by a fan, so both systems should be used together, one set of fans driving air in and one exhausting. Small fans that simply disturb the air already in the holds, like the fans used in offices, simply breed pneumonia among the animals. The electric system is better than steam. The steam pipes heat the holds and steam power is more expensive because of the condensation in pipes that lead so far from the boilers. Again, electricity can be taken to the spot where the power is needed by means of a wire and a fan placed there, while one might not be able to set up a steam engine in the place. Whether the air is forced in or exhausted the distributing system must be used; that is, pipes with openings must be run so that each animal will get some benefit.

I will not enter more into the details, such as placing dampers to control the amount of air on each deck, the calculations of sizes of fans and number of openings, the location of the larger openings, etc.; these are things which must be studied for each ship and frequently changed on the same ship, according to the wind and weather. A simple test of the efficiency of any system is to stop all the fans and go to the outlet. If hot air is coming out of the opening into which you are blowing cold air, the system is working against nature and is wrong. The ventilation of a ship is a difficult matter, and I find that on the *Port Stephens* I have made many mistakes, and one particularly in blowing cold air into the hold near the "roof," so speaking of the holds. It should be exhausted from here, but blown in on the floor. I offer as some apology for this that experts on the subject whom I consulted thought that the foul air containing carbonic acid, etc., would be near the floor, and exhaust pipes should reach the floor, while blowing-in pipes should be high under the decks. I know now by testing the system—stopping the fans—that I was wrong, and am using an unnecessarily large amount of power.

Should the Army ever fit out a proper cavalry ship these matters ought to be carefully considered, and our troops suffer very much at times from the same cause, viz., because the wrong kinds of fans are used. It is sufficient to say that the natural draft of air is down the hatch, and that the hot air hangs under the decks and in the ends of the holds, so that the exhaust fans must have the large openings near the bulkheads, and nature must be assisted by allowing the air to come in through the hatch, not retarded by trying to force air out of it. In general the fresh air is everything.

In my experience in carrying 5,000 head of stock to Cuba and Porto Rico and back I lost but 5 animals (Tenth Cavalry). On that ship animals were not placed below the air currents, and although the heat was intense at times the animals did not suffer, and on the ships I have since had the duty of fitting, those where the animals could be placed on the upper deck, and particularly where a double deck was built on, the animals came across in fine shape, out of 1,700 shipped from Seattle there being a loss of 22, and on the *Port Stephens*, which I brought over, a loss of 5 out of 510. I find that it is not heat that kills them, but deoxidation of the air, most of which occurs from some man trying to force air into a hold already full of foul air, which is like blowing into a bottle. * * *

*Water.*—No ship should be accepted for Government use carrying animals unless she has water-ballast tanks which can be cleaned out, whitewashed, and filled with fresh water. Ships of the class that will carry four to five hundred animals have usually from 600 to 1,000 tons of water ballast as a safeguard to the tanks getting salty, and as a means of replenishing a tank when half empty, condensers must also be used, but while condensed water is as good as fresh water, unless there is a tank to store it in it comes too hot for the animals. If I were inspecting a horse ship I would not only ask what is the capacity of the condenser, but where do you run the condensed water; and in many cases it will be found that sea water at 84° condensed, coming from the condenser at 90°, is turned right over to the horses. This gives them colic. Masters of ships do not like to use the ballast tanks for watering stock, because the tank being half empty makes the ship roll. Having obtained the supply, a distributing tank is placed on deck and a pipe run to each compartment, and at watering times the pumps are started. I have used barrels into which buckets are dipped. This is open to objection that the buckets lie about in the manure and get dirty and are then put in the barrels, fouling the water. I have also used a hose with a stopcock at the end and filled each bucket from that. This is too slow. Should I ever again have occasion to travel on a horse ship I would have made a small, square tank on wheels to roll about, large enough for two to drink from, with a 50-foot length of hose filling it as the horses drank. This would save the water from wetting the deck, would be clean, and avoid the fighting of two animals to drink from the same bucket at the same time. I should add here that in a twenty-two day trip from Honolulu I had but one case of colic, which I attribute to the cool water and the frequency of watering—at 9 a. m. (by the guard), at 11.30 a. m., at 4 p. m , and at 12 m. (by the guard). A careful account of water used shows that for animals 9 gallons a day in hot weather will be used, which also includes cooking and washing for 100 men on the ship. This allowance is ample. Ships carrying cattle give them but 6 gallons, but next to fresh air, plenty of water frequently given is important.

*Facilities for cleanliness.*—Every time a medical officer inspects the ships he inquires for disinfecting material, and a stress is laid on disinfecting. Probably it is all right, but one is apt to seek to obtain a result by disinfecting that should be obtained by cleanliness. A dealer from San Francisco came to me with disinfecting material in Seattle, and felt exceedingly hurt because I refused to recommend or purchase a gallon of stuff for each animal, saying that this was done in 'Frisco. Whether or not this is so I do not know, but he had imposed $1,400 worth of stuff on the officer before I got there, on this representation, so I tried an experiment on this trip. All manure was removed every day and the floors swept, and the disinfectant came to about $25, and consisted of a few jars of chloride of lime, 2 barrels of vinegar, 10 gallons of crude carbolic acid, and a barrel of quicklime; the vinegar is used where the hay or oats is fed from the floor and acid or lime can not be used, and they are used in stalls and scuppers; the ship was clean and well "disinfected."

It may perhaps sound egotistical to say that the master of the ship, who accompanied me each day at inspection, said that he had never in thirty years' experience carrying stock and horses, as well as other cargo, seen so clean a ship and one that smelled so well.

I use this as an illustration simply to show that disinfecting to a moderate extent is all right, but cleanliness is better. To keep the ship free from urine down below, special scuppers have to be fixed so that the urine will run into the limbers and from there to be pumped out by the bilge pumps; or urine tanks must be built if objection is made to running it into the limbers; it must be gotten rid of quickly, as standing in it all the time make the feet sore. The manure must be hoisted in baskets or canvas slings. The necessary cleaning materials, shovels, hoes, rakes, brooms, and baskets are of course provided for. In inspecting a ship as to cleanliness the first thing to find are the scuppers, the "sewers;" if they are not properly located and kept open, all the disinfectant in the world will not save the animals, or will any ventilating plant ventilate it. Yet I have seen many officers go in charge of horse ships who did not know that there was such a thing as a scupper.

*Exercise.*—This is quite a problem. You want to put all the animals on that you can and you dislike to see vacant spaces; but as far as I am concerned I have satisfied myself of the method. All kinds of schemes to give the animals a change of location and the use of his legs, even to building a treadmill, have been considered. On the *Stephens* during fine weather (every day except one or two from Honolulu), I walked the animals up from below on gangways with heavy cleats to an upper deck built with a strong rail around it; this deck will hold 120 animals and is so fixed that they can be walked and even trotted about it. They get air and exercise. Eight horses were brought from Honolulu on this deck with no stalls and they were groomed twice a day as if in stables. The mules got some grooming while up here and all of them were reached. It was, I consider, the best plan I ever hit on, but was not fully utilized forward because of a lot of hospital ambulances I had to take on it. But a cavalry ship carrying, say 400 horses and 400 men, one troop could be up here for grooming while its stalls were being cleaned by another troop below, each troop cleaning another's stalls. The stables would be thoroughly cleaned, the horses exercised, groomed, and looked over, besides getting fresh air. The little pack mules learned the way up and down so that they could be turned loose down below and come up without leading. To show you that it is entirely practicable, I inclose a snap shot of a horse with his sea legs on being ridden on the exercise deck in mid ocean.

*Stalls.*—No padded stalls should ever be placed on this ship, but smooth boards, boarded to within 16 inches from the floor; if more space is left they kick each other, if less they get their legs under when they fall or lie down and can not get them out. Ventilation, flow of urine, and ease of cleaning require that they should not be boarded way down. The stalls should be narrow, about 2 feet 4 inches wide, to keep them from pitching about in rough weather, and as long as the ship's beam will permit. I have measured the sway of animals on the upper decks in heavy weather and found that from the point of the shoulder to the buttock they would pass over 7 feet 6 inches, while the ordinary length of the animals is not above 5 feet; stalls, say, 6 feet 9 inches, are all right, if it is necessary to make them that short, but a wide canvas strap must then be used in place of a breast bar. I found that the breast bars bruised the breast so that many of them had to be lanced, then I threw the bars overboard and used a canvas strap; this should be made 8 inches wide, of hemp canvas (cotton canvas chafes too much) with a spreading stick at each end to keep it from getting wrinkled up. By adjusting this band the horse can come as far forward as one pleases, and a stall not over 5 feet may be made to do. The cleats should be well nailed down, made of hard wood, and should be placed one in front of the stall in the alley and five in the stall, equal distant apart; they should be made of 2 by 2 inch stuff.

There should be no back to the stall; that is, nothing boarded up for the animal to chafe his tail against. In midship stalls, where two are placed together, I find it is best to let the butt of the animals come together; on upper deck stalls, to leave a place for a man to get behind the animals, and on lower decks to let the back of the stall be the side of the ship.

*Slings.*—I am not satisfied about this subject. On leaving Seattle I had a sling under each animal, and in a seven days' gale we went through, when at times a man could not stand up, when the ship pitched about so the mules turned somersaults, I consider that the slings saved the lives of a great many mules. They would get tossed about and thrown around until they were worn-out—not one of them slept for seven days—they were worn-out and finally fell. The slings held them up and they laid there. A mule gives up and will not fight for his life like a horse, and many of them concluded to die and go out of business; but when they found the sling under them they seemed to take new courage. After leaving Honolulu I experimented the other way and did not put a sling on, and they stood up for twenty-three days, coming in without injury. We had some bad weather, too, but they had their sea legs on. Had we not struck the storm immediately on getting to sea I think they would have stood it all right; as it was, however, the sling proved of value. Slings for sick mules must of course be brought along. I say that the animals stood up all the time; but the pack mules learned how to lie down in their narrow stalls, and many of them would lie down just like a dog with their paws out in front and their hind legs doubled under. The orders to the guard were to see that their legs were not in danger, and if the mule was not sick not to disturb him. Frequently men made a mistake in this. Some animals sleep lying down and can't sleep on their feet, while others always sleep standing. When a man sees an animal down on a ship he immediately runs for help to make him get up, but the animal, if lying comfortably, is just as well off then as if he were on shore. As an example, I brought some live steers over to feed my men. They had the same space as a mule except that the partition was taken out between two. One always laid down until the other got tired and kicked him to make him get up, when he would lie down himself. They came through fat, and one was landed in Manila as a sample for the commissary.

*Feeding.*—In this respect I do not agree with many officers, who think that because an animal is on a ship he should be starved for fear of making him sick. It is a pleasure for me to be able to say that the mules are fat that came over with me. I find that I eat a full ration at sea—most men do after they get over their first uneasiness. I think it is much the same with an animal. Before starting, I fed bran mash three days, once a day, to clean them out; then for about thirty-six hours after leaving they got full ration of hay but no grain; then 5 pounds of oats a day and full ration of hay; but even this was not a strict rule; each wagon master had had an extra sack of oats each day to feed large mules that were running down. In the heaviest weather extra hay was always issued at night and the animals were fed at midnight on hay. One thing must be borne in mind, that mules pitching about trying to keep their feet, work as hard as if they were pulling a wagon, and if the weather is at all cool will eat full rations of hay and grain. In sultry weather, with the sea smooth, I would not feed quite so much. Bran mash was fed every second or third day. To lay down a rule that animals are to be fed the same in all weather, that the little packs are to have the same as the big wheel mules, is to make a nonentity of the officer in whose charge they are. I find also that feed boxes are of little value. As far as Honolulu I used them, then I put them in the hold and fed off the deck both hay and grain. This seemed to please the mules more, and I could always tell at a glance if one was off his feed. It also had the effect of making the men sweep the deck often. This is where I used the vinegar for disinfecting.

*Organization.*—I selected a train master and 5 wagon masters from the teamsters, at increased wages. The ship force thus organized consisted of a train master, 5 wagon masters, 75 teamsters, a veterinary surgeon, an assistant veterinary surgeon, and 3 cooks.

Each wagon train had its own dock of mules, its own mess, did its own guard duty—1 teamster being detailed as mess man for each, and 1 to report to the veterinary surgeon from each. This gave each wagon master a working force, after detailing the guard of 3 from each, of 10 men for 100 mules, which is not too much. After a few days out things ran very nicely, which was somewhat to be wondered at when one considers that the "teamsters" were a bit rough. For punishment I took away their pay or cut down their rations or gave them extra work, and no disorders or fights of any kind occurred. After having several outfits of this kind to and from Cuba I have concluded that the only way to do is to fix the responsibility for work not done on some man. In carrying the regular cavalry, of which I took the Second, Fourth, Seventh, and Tenth over, I found it necessary to take a piece of chalk and mark over each horse the troop he belonged to. So with those civilians, in place of saying, "Why did not someone clean up here?" by assigning certain portions of the ship to each wagon boss I can call him to time and say, "Why did not you do it?"

The teamsters had to be fed by me, and a galley built for the purpose. On authority from the chief commissary, Department of the Columbia, I provided extra food of a more varied nature than the ration, and here again I experimented. We have been paying chartered ships 75 cents a day for feeding these men. I provided a very good table for them, with fresh meat—mutton and beef (both carried on the hoof)—eggs, butter, milk, canned fruit, apples, etc., and paid the 3 cooks—1 $50, the other 2, $35 per month each—had ice and lime juice all the time, at a cost of 12 cents a meal, which included all wastage and represented the total cost of all supplies and labor, divided by the actual number of meals. A copy of each day's bill of fare had been kept, as well as morning reports of mules and teamsters, and temperature of the holds every four hours.

The ship left Seattle, Wash., November 9 (510 mules), under orders for Kobe; but finding that I could not get there I went to Honolulu, and reached that point after being out sixteen days, losing 2 mules; rested five days and came here, losing 3 more mules; laid here thirty-six hours, and then got lighters and put them all off in one day. * * * I ventured to express the hope that the letter may contain some suggestions which will aid you in inspecting this class of transports. The work on them is distasteful to most officers, and seems to do haphazard, picking up any man who comes along and relieving him after one trip, when he is beginning to know something of it.

With most of them the ship is simply used to get them over; but where you consider the suffering the poor brutes undergo, caused oftentimes by the officers in charge being seasick for the first week, or the teamsters being either drunk or seasick, one feels that a proper selection should be made and the officer required to stay whether he wanted to or not.

Very respectfully,

J. C. Byron,
*Captain, Assistant Quartermaster, U. S. A.*

Col. E. A. Garlington,
*Inspector-General.*

### CHARTERED TRANSPORTS.

Cost of charter.

The amount paid by the Government per day for the chartered transports is reported as follows: *Tartar*, $1,000; *Aztec*, $800; *Flintshire*, $700; *Westminster*, $650; *Port Albert*, $600; *Pennsylvania*, $600.

Age.

The oldest of the chartered vessels is the *Pennsylvania*, 27 years of age, the *Athenian* being 26 years old, the *Newport* 20, the *Aztec* 5, and *Flintshire* and *Port Albert* 4 years each.

Material.

The hulls of the *Aztec*, *Flintshire*, *Westminster*, and *Port Albert* are built of steel, and the *Tartar* of iron.

Dimensions.

The chartered transports are smaller than the majority of those owned by the Government, the longest of the former being the *Tartar*, 376 feet 5 inches, followed by the *Westminster*, 370 feet 6 inches; *Aztec*, 350 feet; *Pennsylvania*, 343 feet, and *Flintshire*, 327 feet. The width of beam varies from 47 feet 2 inches in the *Tartar* to 42 feet in the *Aztec*.

Tonnage and cargo capacity.

The gross and net tonnage of these vessels is reported as follows: *Tartar*, 4,358 and 2,768, respectively; *Westminster*, 3,809 and 2,510; *Port Albert*, 3,517 and 2,250; *Pennsylvania*, 3,344 and 2,567; *Newport*, 2,735 and 1,806; *Flintshire*, gross, 3,815; *Athenian*, net, 2,439. The cargo capacity of the *Athenian* is given as 4,000 tons, and of the *Newport* as 2,300 tons.

Draft.

The *Tartar* has the deepest mean draft of the chartered transports, both loaded and light, the figures being, respectively, 25 feet 6 inches and 19 feet 9 inches. The *Pennsylvania* comes next with 24 feet 6 inches and 16 feet 4 inches, and then the *Flintshire*, 24 feet 6 inches and 14 feet.

Ballast.

The *Westminster* carries 1,344 tons of ballast, 744 of water, and 600 of rubbish; the *Aztec*, 1,306 tons, 707 of coal and 606 of water; the *Flintshire*, 600 tons of water ballast; the *Tartar*, 484 tons of water ballast, and the *Pennsylvania* 450 tons, 150 water and 300 kentledge.

Sails.

The chartered transports are provided with fore and aft sails, those on the *Port Albert* being used only as a means of steadying the ship.

Steering apparatus.

The *Pennsylvania* has both electric and hand steering gear and the *Tartar* steam steering gear.

Fittings.

The gangways, companion ladders, towing hawsers, chronometers, compasses, and anchors are reported as sufficient.

Total payments.

The amounts paid these several vessels during the last fiscal year, or the totals, have not been definitely reported.

Cabins.

The *Tartar* has 35 cabins, accommodating 105 first-class passengers; the *Flintshire*, 4 cabins for 8 first-class passengers, and has also accommodations for 34 second-class passengers. The *Athenian* has cabin room for 24 first-class and 98 second-class passengers. The *Newport* has 34 cabins and the *Pennsylvania* 21 cabins.

Capacity for troops.

The *Tartar* is reported as being fitted to carry 1,165 troops and the *Newport* 525 in bunks. On the latter 7 ventilating fans are provided.

Life-saving apparatus.

Ten life-boats, accommodating 380 persons, and 4 ordinary boats, 1,730 life-preservers, and 14 life buoys constitute the life-saving apparatus on the *Tartar*. The *Pennsylvania* has 8 life-boats, 9 ordinary boats, 4 life rafts, 90 life-preservers, and 12 life buoys; the *Newport*, 8 life-boats, 5 life rafts, and an ample supply of life-preservers; the *Flintshire*, 4 ordinary boats, 98 life-preservers, and 6 life buoys.

Fire apparatus.

The vessels are reported properly equipped with steam pumps, hose, extinguishers, and fire buckets.

Water supply.

The *Athenian* is equipped with 5 tanks for fresh water, their total capacity being 250 tons; the *Newport* has 4 tanks holding 14,000 gallons; the capacity of the tanks on the *Port Albert* is 650 tons, and on the *Pennsylvania* 70 tons. The distilling apparatus on each ship provides the following supply of fresh water daily as needed: *Athenian*, 4,000 gallons; *Pennsylvania*, 2,200 gallons; *Newport*, 1,800 gallons; *Aztec*, 1,500 gallons; *Flintshire* and *Tartar*, 1,000 gallons each. The *Pennsylvania*, *Athenian*, and *Aztec* also carry fresh water as ballast.

Engineer department.

Six of the chartered transports have engines of the triple-expansion type, and five are propelled by single screws. Their steaming capacity averages about 10 knots per hour, the average speed of the fastest, the *Newport*, being 11.2 knots, and that of the slowest, the *Pennsylvania*, 9.42 knots.

The daily consumption of coal and the coal capacity in tons are reported as follows: *Tartar*, 50 and 1,700; *Westminster*, 39 and 980; *Newport*, 34 and 1,100; *Flintshire*, 30 and 1,140; *Aztec*, 30 and 900; *Pennsylvania*, 21.12 and 580; *Athenian*, 70 (daily consumption), and *Port Albert*, 1,200 (coal capacity).

The vessels are properly equipped with steam windlasses and winches.

Ventilation.

The means of ventilation on the *Athenian* and *Flintshire* is by the exhaust system, and on the *Tartar* by electric fans. The *Pennsylvania* is reported to be without ventilating apparatus. There is nothing of more importance in fitting up a transport, and the simple and permanent means seem to prove the best under the various climates and weather the ships are subjected to.

Messing.

The capacity of the saloon galley on the *Tartar* is given as 300, with tables seating 108. There is also a separate galley for the crew. On the *Pennsylvania* the capacity of the troop galley is 1,000 and of the tables 45.

The average daily cost per saloon passenger for subsistence is reported as $1 for first-class and 85 cents for second-class on the *Athenian;* $1 for officers on the *Westminster* and 65 cents for second-class passengers on the *Flintshire.* The average daily cost of subsistence for quartermaster's employees on the *Aztec* is reported as 75 cents, and on the *Westminster* as 85 cents, and for enlisted men on the latter vessel 75 cents. It is submitted that the price should be officially fixed for all at about this.

The capacity of the bakery on the *Tartar* is given as 1,000 pounds and on the *Newport* as 400 pounds.

Cold storage.

The refrigerating apparatus on the *Tartar* is reported in good order, and the capacity of the cold storage 20,000 pounds. The temperature maintained is 28°. There is also a separate cold storage on this vessel with a capacity of 30 tons, and in addition 20 tons of ice are carried. On the *Pennsylvania* the brine-circulation system is used, the cold-storage capacity being 60,000 pounds, and the temperature maintained 29°; 11 tons of ice are also carried. The capacity of the cold storage on the *Athenian* is 10 tons and on the *Newport* 14,240 pounds; and on the former vessel there is an ice machine with a capacity of 140 pounds.

Electric-light plant.

The electric-light plant on the *Tartar* is reported in good condition, while on the *Flintshire* it is said to be poor and on the *Newport* as of insufficient power, with 300 lights. The *Pennsylvania* has 1 dynamo and the *Tartar* 3 of 150 amperes each.

Hospital.

The capacity of the hospital on the *Newport* is 24 patients, with isolation ward for 3 patients. On the *Tartar* 18 patients can be taken care of in the hospital, the isolation ward providing for 6, and on the *Flintshire* the hospital accommodates 6 patients.

Bathing and toilet.

A suitable number of bath tubs and shower baths are reported on the *Newport*, *Tartar*, and *Westminster*. The *Pennsylvania* has but one bath tub. The closet seats are reported as sufficient in number and lavatories and supply of basins adequate.

Employees.

The following table shows the number of employees, as reported, in the deck, engineer, and steward's departments, and the number of miscellaneous employees; also monthly pay roll:

| Name of vessel. | Deck department. | Engineer department. | Steward's department. | Other employees. | Monthly pay roll. |
|---|---|---|---|---|---|
| Newport | 21 | 28 | 20 | 6 | |
| Pennsylvania | 56 | | | | |
| Aztec | | | | 42 | |
| Flintshire | | | | 42 | $1,740 |
| Tartar | | | | 6 | 360 |
| Westminster | | | | [1] 34<br>[2] 7 | |
| Port Albert | | | | 48 | |
| Athenian | [3] 109 | | | | |

[1] Civilians.

[2] Enlisted.

[3] Including engineer, and steward's departments.

**Animals.**

The *Port Albert*, *Athenian*, *Westminster*, *Aztec*, and *Flintshire* are reported equipped with stalls and other facilities for transporting animals, the number of stalls on each vessel being: *Port Albert*, 520; *Athenian*, 393; *Westminster*, 366; *Aztec*, 365, and *Flintshire*, 328. The stalls are located on the main deck and between decks. On the *Flintshire* the stalls are reported to be too long, and on the *Athenian* too short and too wide for the proper accommodation of the animals transported.

The *Aztec*, *Flintshire*, *Westminster*, and *Port Albert* have slings for the animals, but they are reported to be but little used. The ventilation is mostly by forced draft and exhaust fans. The *Westminster* carries a supply of fresh water in her ballast tanks. The facilities for cleanliness on the *Athenian*, *Aztec*, and *Westminster* are reported as inadequate. The *Flintshire* has a hospital for sick animals.

**General condition of vessels.**

The vessels are generally reported in good condition, though the *Flintshire* and *Westminster* are said to roll badly.

## VESSELS BEFORE PURCHASE.

The following table gives some interesting data relative to some of the vessels of the army transport fleet before their purchase by the Government when in the service of some of the leading ocean and local steamship lines, and affords an opportunity to some extent for comparison with their present service. The data tabulated shows for these vessels the extreme ports between which plying and distance in miles; average number of passengers and tons of merchandise carried per trip; rates per passenger and ton of merchandise for extreme distance; number of employees, including officers, in deck, engineer, and steward's departments; monthly pay roll of same; average daily consumption of coal and speed per hour; total average cost per trip; average expenditure per annum for repairs, and year in which built:

| Names of steamships. | | Number. | Extreme ports between which plying. | Distance, round trip. | Average number of passengers carried per trip. | Average tons of merchandise per trip. | Rates per passenger for extreme distance. | Rates per ton of merchandise. | Number of employees, including officers, in deck, engineer, and steward's departments. | Amount of monthly pay roll of same. | Average consumption of coal. | Average speed per hour. | Total average cost per trip. | Average expenditure per annum for repairs. | When built. |

# APPENDIX C.

## MILITARY ACADEMY.

War Department, Inspector-General's Office,
*Washington, June 25, 1900.*

Sir: I have the honor to submit the following report of an inspection of the Military Academy, West Point, N. Y., made in compliance with instructions from the Secretary of War, dated May 8 and 15, 1900, copies of which are inclosed. Accompanied by Maj. Thomas T. Knox, inspector-general, I left this city May 14 and arrived at West Point at 5.36 p. m., on the same day, after having been joined, while en route, by Maj. J. M. K. Davis, assistant to the inspector-general, Department of the East. After being received with the proper military honors, the inspection of the Academy was commenced on the following day, the officers assembling the first evening.

The Superintendent had already been furnished by another department with a copy of my orders (which included a letter to a former Superintendent), and though the corps of cadets was not explicitly mentioned, he courteously invited a full inspection, which greatly facilitated the work within the limits understood to be desired. The selection of the Superintendent from the line may have important effects.

The programme for practical exercises and inspection, a full copy of which is herewith submitted, was briefly as follows:

May 15: Review in full dress; review and inspection in field equipment and intrenching tools; light battery, mountain gun, siege rifle and mortar, machine gun, seacoast and standing gun drill; target practice, second and fourth classes. The exercises, so far as executed, were very satisfactory.

May 16: Exercises in castrametation on the parade ground, and shelter trench exercises on the maneuver terrain. The shelter trench exercise was eminently practical and very instructive. In seventeen minutes the line was intrenched and the men well protected. The ground was hard and rocky.

May 17: Exercise in attack and defense. This exercise was well executed, and natural cover was taken advantage of, but in some cases the cadets exposed themselves unnecessarily.

May 18: Battalion drill and escort of colors.

These exercises were executed in a very soldier-like and generally satisfactory manner, with precision and snap, and illustrate the thoroughness with which the commandant of cadets, Lieut. Col. O. L. Hein, conducts his department, with the aid of accomplished assistants.

The cavalry drill, too, under command of the cadets, was very satisfactory. The movements were well executed, the gaits being generally rapid. A thorough knowledge of cavalry drill was evident. It was observed the cavalry officer present had a breast strap on his horse, which is not authorized by the regulations. Excluding the curriculum from inspection was supposed not to preclude these exercises.

### EARLIER HISTORY.

The Academy was established by an act of Congress approved March 16, 1802, and formally opened July 4 of the same year with ten cadets. Previous to this time a few cadets of the corps of artillerists and engineers had been instructed at West Point. The earlier struggles of the

Academy to gain a foothold illustrate the marked opposition that has attended almost every beneficial innovation. In 1810 the institution was seriously threatened by the opposition of the then Secretary of War, and in 1811 it practically ceased to exist, and at one time was left without a single instructor or cadet. In 1812 Congress took the matter in hand and enacted important legislation which in a great measure reorganized the institution; but it was not until 1817, when Maj. Sylvanus Thayer was appointed Superintendent, that the Academy began to flourish. His efficient administration, which lasted until July 1, 1833, marked a new era in the history of its development. Major Thayer, who was justly called the "Father of the Academy," laid the foundation that has made this place celebrated and raised it to the foremost rank in the military schools of the world; and it richly deserves the admiration bestowed upon it here and abroad.

The institution has grown greatly in the confidence of the nation and the extent and importance of the work it performs since its precarious struggles of nearly a century ago, and the methods and principles instituted by Major Thayer are recognized as its characteristic features, which have been the delight of those who are most interested in the Academy.

### PRESENT CONDITION.

The Superintendent of the Academy, Col. A. L. Mills, and the commandant of cadets, Lieut. Col. O. L. Hein, are most efficient officers and enthusiastic in their work, which they continue with the same progressive spirit that was shown by their predecessors, and an earnest desire pervades the entire corps of officers and instructors to put forth their best efforts in maintaining and further improving the proficiency heretofore attained. The condition of the post and Academy and of the several departments connected therewith bear witness to the efficient and wise administration.

The buildings, which number more than 160, of various designs, structures, and uses, were generally in excellent condition and police, and further improvements were still going on. Since the last inspection of this historic place by an officer of the Inspector-General's Department in October, 1897, many changes and improvements have been made. Among those recommended by the inspector in reports of prior inspections, and subsequently consummated, are the following:

Removal of a number of old buildings; better and more abundant quarters for the officers; steam heat for the cadet barracks; establishment of a crematory for offal; better and more horses for instruction purposes; improved cold storage; removal of old and useless fences; better accommodations for enlisted men; better bathing facilities; improved hospital facilities; and remodeling of library.

The improvements that the post has witnessed during the past decade are seen on every side and have not only affected buildings, grounds, roads, and trees, but also health and comfort, and practical and theoretical instruction; and even the uniform has not been left unaffected in the progressive movement, the most noticeable being a change in the dress hat, overcoat, and shoes, and the adoption of a flannel fatigue coat, campaign hat, cadet-gray leggings, and class stripes on the coat cuffs. Intrenching tools (spades and picks, attached to canvas cartridge belts) were introduced in July, 1898, as was also the field equipment, consisting of shelter tent, rubber blanket, haversack, meat can, knife, fork, and spoon, tincup and canteen.

## RECENT CHANGES.

One of the most important changes that has recently been introduced by the Superintendent of the Academy, Colonel Mills, at the suggestion of the commandant of cadets, Lieutenant-Colonel Hein, is an increase in the practical work without encroaching upon the time allotted for academic instruction. This change promises excellent results, as it will equip the young officer to perform intelligently his military duties on joining his regiment instead of having him largely learn the practical side of his profession after joining. And it will give those cadets who may fail to graduate, or leave the Academy for other reasons, sufficient practical knowledge to assume the functions of a subaltern in emergency cases, which may result in great advantage to the Government. The importance of this innovation can hardly be overestimated, and it is especially opportune at this time, when so many of our regiments are serving in the field and those at home are largely filled with recruits, and the young officer must rely upon his own knowledge and judgment. The lack of an adequate number of well-instructed officers is now seriously felt in the army perhaps by supplying officers to the volunteer regiments, though there were about 50 additional second lieutenants just previous to the Spanish war.

In order to effect the change, it became necessary to rearrange the entire programme of summer work and give the cadets more opportunity to exercise the command and responsibilities devolving upon officers and noncommissioned officers. Troop parade was suspended, except on Sundays; guard mounting postponed until after evening parade; drill periods changed; an entire day of each week reserved for a practice march combined with field exercises; all privates of the third class were made to act as noncommissioned officers, and those of the first class as officers; more time and attention were given to exercises in applied and minor tactics on varied ground; and the entire practical instruction made more progressive and extended, covering all the duties usually expected from line officers at military posts, without curtailing the time for theoretical instruction, or adding to the time heretofore devoted to practical work.

Reiteration of well-mastered drill is not allowed to absorb the time and prevent other important practical instruction, and very recently practical instruction in mountain gun and machine-gun artillery has been added. The scope of this work seems sufficiently wide and well selected to engender confidence and prepare the graduate in every way for his position, and he will find his knowledge of these duties of decided value to him when he joins his regiment.

Recent additions to the theoretical course consist of instruction in security and information for the fourth class; also school of cannoneer (artillery regulations) and so much of the infantry regulations as pertains to school of company; and a complete course of rifle target practice and revolver practice was introduced in summer of 1898, and experimental drills and improvements have been introduced.

More attention is also given to legibility of handwriting, and cadets are now required to practice vertical writing.

Another progressive and perhaps equally valuable change, which has an important bearing upon military efficiency and soldierly deportment, and is of special moment to the cadet, is the introduction of an efficiency mark for discipline and the performance of military duty to offset or counteract the demerit marks, and give the cadet an opportunity to purge himself of a mark that would cling to him throughout his course. Of this improvement the Superintendent of the Academy says:

> In the past for many years, in the final merit roll, the only index of the purely soldierly qualities of the cadet has appeared under the heads of "Discipline" and "Drill regulations," the former having a weight of 200, determined only by the amount of demerit the cadet received during the last two years at the Academy, and the latter a weight of 100, found from the value given to recitations in "Drill regulations." By the change these qualities are expressed in the final merit roll under the heads "Conduct," with a weight of 125; "Drill regulations" and the "Service of security and information" (recitations in), a weight of 115; "Military efficiency," 130; "Soldierly deportment and discipline," with a weight of 20; the total weight for the subjects being 390, as against 300 in the past. Conduct as now determined is based upon the proposition that the longer a cadet is at the Academy the better his behavior should be and the fewer his demerits. It is given a weight in the standing of each class, being greatest for the first class and decreasing proportionately for each class below the first, the final standing in conduct being computed from the standing in each year.
>
> This recognition of military efficiency and soldierly deportment has already had a marked effect on the zeal and intelligence with which duty is performed. The members of the first class are detailed in turn according to roster for the various duties as officers at drills, parades, tactical exercises, and as officer of the day, etc., and are marked on their performance of these duties. In this way each member of the class is given credit for his efficiency in the performance of military duty and his display of qualities in the make-up of an officer. The mark for "soldierly deportment" is determined by the combined personal estimate of the commandant of cadets and each of his assistants, together with recorded delinqencies affecting soldierly deportment and discipline.

These changes seem in the right direction, and not only encourage the cadet but give him an opportunity to bring out his best qualities as an officer, and give him confidence and self-reliance. The results are being watched with great interest by the officers of the academy, and, it is believed, will exert a wholesome influence upon both the young officer and the rank and file.

The introduction of well-considered innovations tends to prevent the stagnation which is one of the greatest evils to be dreaded in military life. Attention is now kept alert, and a lively interest in current local affairs is evident throughout the command.

On the 10th of each month the cadets are arranged into three conduct grades by classes according to the number of demerit received during the preceding month during which they have been present according to the following scale:

| Class. | Number of demerit per month. | | |
|---|---|---|---|
| | First grade. | Second grade. | Third grade. |
| 1 | 3 or less | 4 to 7 | Over 7. |
| 2 | 3 or less | 4 to 7 | Over 7. |
| 3 | 4 or less | 5 to 9 | Over 9. |
| 4 | 5 or less | 6 to 10 | Over 10. |

And they are accorded certain additional corresponding privileges.

Under this arrangement the cadets of the various classes present during the month of April were given the following grades:

| Class. | First grade. | Second grade. | Third grade. |
|---|---|---|---|
| 1 | 19 | 18 | 17 |
| 2 | 24 | 25 | 26 |
| 3 | 26 | 26 | 19 |
| 4 | 70 | 36 | 23 |
| Total | 139 | 105 | 85 |

The battalion of cadets was never so large nor better nor had such advanced and practical outdoor instruction as now.

The aim and purposes of the academy are well understood; and theoretical and scientific instruction is happily blended with practical work, so as to enable the cadet upon leaving the academy to discharge at once the full duties of his chosen career in all its ramifications. The course of study has been constantly improving, and the demands are more exacting and the graduates are better equipped to assume the functions and responsibilities of their profession than ever before in the history of the institution.

### THE COMMAND.

The post and academy are under the immediate command of Col. A. L. Mills, who is a most efficient officer and well qualified for the important duties to which he has been assigned.

His command comprised 64 officers, professors, and instructors, 336 cadets, and 395 enlisted men, consisting of noncommissioned staff, band, company of engineers, and several detachments, of which number 1 officer, 9 cadets, and 7 enlisted men were absent from the post at date of inspection. A copy of the consolidated morning report of May 19, 1900, and of the return of troops, giving detailed information, is herewith submitted. There is an officer to about 5 cadets or 6 enlisted men.

The quota of cadets lacks 47 of the full number, and an equal number of recruits is required for the full complement of enlisted men, mostly for the company of engineers. Since the last annual inspection, Lieutenant Rivers, the post adjutant, had 90 applications for enlistment, of which number 75 were accepted and 15 rejected, principally for impaired vision and insufficient development. Among the accepted recruits were 40 of American and 35 of foreign birth, the latter mostly Germans. There were no desertions.

### ADJUTANT'S OFFICE.

The adjutant's office was in good condition, and its records properly kept and up to date. Lieut. William C. Rivers, First Cavalry, who is the adjutant of the Military Academy and of the post, is a very efficient and painstaking officer and well qualified for his present duties.

He has also charge of the band and field music of the post. The strength of the band has been temporarily increased by the addition of 16 privates, but it seems that more satisfactory results would be obtained by reorganizing the band under legal authority on a permanent basis and readjusting the salary of the musicians as recommended by the superintendent in his last annual report.

### GROUNDS.

The grounds are generally in very good condition, but some of the roads need remetaling in places; and it would add to the beauty of the place if some of the old wooden fences were replaced by iron ones.

### BUILDINGS.

The buildings are, with few exceptions, generally in good condition. The number of quarters for officers is not sufficient. Among the officers to report for duty in August next are so many that are married that it will be necessary for two families in some instances to occupy quarters with but one bathroom, kitchen, etc., and only suited for occupancy by one family. This difficulty will be further aggravated by the increase of the corps of cadets as contemplated in present army legislation, as the increase will necessitate a greater number of instructors. The roof of the academic building, which is of an asphalt preparation, is reported as cracking badly and therefore causing much damage to the interior by water leaking through. A new roof seems a necessity.

An electric-lighting plant seems at the present date indispensable for the needs of the post. The cadets should have the best light possible for studying, and all buildings and streets should be well lighted. At present the only electric lighting is in the Cullum Memorial Hall.

In this connection the following is quoted from an article in the Scientific American of June 23, 1900, under the caption, "The United States Military Academy," by Colonel Larned:

> There have been three important periods of construction in the history of the academy. The first, from 1836 to 1841, includes the chapel, the academy building, recently torn down, ordnance laboratory, and the library. This latter, a castellated and buttressed building with a dome, determined the style of the barracks erected later. The second, from 1851 to 1858, comprises the cadet barracks, mess hall, riding hall, a soldiers' hospital, and two sets of barracks. The third, begun in 1890, sees completed the new academic building, gymnasium, a memorial hall, a renovated library, a new water supply, some few officers' quarters, a soldiers' hospital, barracks and quarters, and a battle monument, with other minor changes. Although in this last period much has been done, there remain many of the buildings of the first and second period in an inadequate and obsolete condition, irrespective of any increase in the functions of the institution. Any proposition looking to a considerable enlargement of the academy involves at once a review of the whole establishment, and invites at the same time a consideration of the scheme of arrangement throughout with a view to its systematic renewal.

The improvement in furniture and conveniences about the cadet barracks show consideration, and the cleanliness, from basement up, is proverbial. The shoe-blacking facilities are of the simplest character.

### CULLUM MEMORIAL HALL.

This handsome and imposing edifice was erected under the provisions of the will of Bvt. Maj. Gen. George W. Cullum, who, himself a graduate and at one time superintendent of the academy, bequeathed $250,000 to the Government of the United States for the purpose. It was his will that this hall serve as a receptacle of statues, busts, mural tablets, portraits of distinguished deceased officers and graduates of the Military Academy, of paintings of battle scenes, trophies of war, and such other objects as may tend to give elevation to the military profession.

The corner stone was laid April 15, 1896, and the building was completed December 21, 1898. Quite recently the interior decorations and lighting were completed, for which Congress appropriated $25,000, and on June 12, 1900, the building was dedicated under appropriate ceremonies. It is a massive, rectangular, two-story structure, built of granite and located upon the eastern border of the general parade ground overlooking the Hudson. On the first floor is an assembly hall for social entertainments, a handsome reception room, and dressing and service rooms. On the second floor is the main hall, which is beautifully proportioned and richly decorated and has a length of 107 feet by a width of 69 feet, terminating at the north end in a stage matching in artistic design the magnificent ceiling and fine decorations around the walls. The hall is splendidly equipped and meets a long-felt want.

## DOCKS.

There are three docks. The south dock, used as a landing for passenger boats and by necessity for certain classes of freight boats, is in very good condition.

The coal dock needs an addition such as will protect boats unloading from being driven ashore by the ice.

The north dock is in a positively unsafe condition. The fender piles all need replacing. The deck planks are rotten. About 20 piles need replacing under dock, and the string pieces and timbers above water need renewing generally.

## WATER SUPPLY.

The water of the post is obtained from three different sources, Round Pond, Cascade Brook, and Crow Nest Brook. A fourth source, Sinclair Pond, has been condemned and no longer forms part of the water system. Round Pond is situated in the hills about 5 miles distant from the post proper on land owned by the United States, and has an estimated capacity of about 48,000,000 gallons; but owing to the location of the intake and the impurities found in the water below a 20-foot depth, this pond can be utilized to the extent of only about 20,000,000 gallons, or less than 40 days' continuous supply; and when drawn down to its practicable limit it will require about two years to fill it again. Its supply is therefore uncertain.

Cascade Brook is about 3 miles from the post proper, partly within the limits of the reservation and partly on private grounds, and has an estimated capacity of 117,000,000 gallons per annum. It is dry during part of each summer, and at other times it is a mountain torrent, causing a large part of the water to go to waste for lack of proper storage facilities.

Crow Nest Brook is on the reservation in a ravine, and has been estimated to discharge about 80,000,000 gallons during winter and spring, but is dry during the summer months. It also wastes a large amount of water during freshets for lack of storage facilities.

There are two reservoirs within the reservation: Delafield, with a capacity of 9,000,000 gallons, and Lusk, recently constructed, with a capacity of about 95,000,000, of which only about 40,000,000 are fit for use. Below the former there are a water house and a filter bed with a filtering area of 60 by 30 feet, and below the latter there are two filter beds each with an area of 96 by 63 feet, one of which, it is reported, will be ready to operate within a month. It is contemplated to connect Crow Nest Pond with Lusk reservoir by an 8-inch main.

The water is reported excellent after filtration, and adequate in seasons of ordinary rainfalls; but as the consumption averages over 500,000 gallons daily, and is increasing, the time will come when an additional supply will be needed. Considering the uncertainty of Round Pond and the fact that the head waters of Cascade Brook lie beyond the control of the United States authorities, it seems advisable to secure an additional supply. Long Pond, which is only one-fourth of a mile south of Round Pond, will, it is reported, give an abundant supply of water for all future needs, and should be acquired at an early day. It is estimated that the land, pond, water rights, and necessary pumping plant would cost about $100,000 if acquired now.

Suitable and abundant water is such a vital question that it is mentioned, though prompt attention is doubtless assured.

### CADET MESS.

The mess of the cadets is under the charge of Maj. Charles B. Hall, Second Infantry, who is the treasurer of the Military Academy and quartermaster and commissary of cadets, and seems to perform his duties in a conscientious and efficient manner.

The mess hall building was in excellent police, but it is inadequate for its present use, and the appliances for cooking and washing dishes are antiquated and should be replaced by more modern and labor-saving methods. The dining room is comfortably appointed, but too small. The kitchen and accessories are old and in bad repair; and all the work connected with the establishment is still performed by hand. The bakery was in better condition, but its facilities are old, and the method of handling garbage requires too much labor.

The cadets' mess building also contains the mess room for the bachelor officers, which makes it cramped and unsuitable. Arrangements, it is understood, are being made for a special building for the bachelor officers' mess, and when this is done the cadets' mess building should be remodeled and supplied with steam cooking apparatus and other approved appliances, which are badly needed. The cold storage was the most modern convenience connected with the establishment.

The food was very satisfactory in variety and quality and well cooked, and the bread of excellent quality.

Major Hall, who disburses the funds accruing from the deposits and pay of the cadets, had about $3,000 of this money in his personal possession, which, it would seem, in the interest of good administration, should be deposited in bank.

### GYMNASIUM.

The gymnasium building is an attractive well-built stone structure, in excellent condition, and fully equipped with all modern appliances. Its size is sufficient for the present number of cadets, but if the corps is to be increased in number the building should be proportionately enlarged, which can be done at a moderate expense by extending it to the rear.

The system of physical training embraces gymnastics, setting-up exercises, fencing, and swimming, and has reached an admirable state of perfection and order under the able direction of Mr. Koehler, who is also master of the sword and an excellent instructor. The old method of detailing members of the third class in turn as instructors in physical drill of the new cadets has been abolished, and their physical training is intrusted to the regular instructor assisted by the new cadet instructors of the first class.

A systematic progressive course of training is pursued from date of admission to the Academy. Complete measurements are taken and special efforts made to train in the direction of deficient development, stress being laid upon securing a generally uniform development of the body rather than putting a few athletes in a high state of training.

The results have been very gratifying and are evidenced by a uniformly fine carriage and fine appearance of the cadets.

The master of the sword, Mr. Koehler, occupies an anomalous position in his capacity as civilian instructor of soldierly accomplishments. The Superintendent speaks in the highest terms of his important and and efficient service, and has urged repeatedly that he should be given well-deserved military rank and authority.

### LIBRARY.

The library is under charge of Prof. Peter S. Michie, of the department of natural and experimental philosophy, and he is assisted by Otto Plate, Ph. D., who is a graduate of the University of Strassburg and has been employed as assistant librarian since November, 1893.

The library building is at present being renovated and enlarged, and when the work is completed, which it is understood will be within the next six or seven months, will be able to accommodate 150,000 volumes. It will be practically new and fireproof, and contain one main hall and two reading rooms on the first floor, and two stack rooms on the second floor. The arches sustaining the floor are of special form, and the reconstruction in progress is interesting. The delay in beginning the work of reconstruction is due to the fact that the heavy advance in the price of building material caused the proposals of the competing bidders to be considerably in excess of the amount appropriated by Congress, and the work of renovation finally had to be undertaken by the Academy itself.

There are at present about 44,524 volumes and 7,400 pamphlets in the library, classified according to the estimate furnished as: Military, 30 per cent; mathematical and scientific, 10 per cent; light literature, 15 per cent; biographies and historical, 30 per cent, and periodicals, 15 per cent. All books most likely to be in demand have been stored during the reconstruction period in the academic building, where they are of easy access. Books may be drawn from the library for one week at a time, but their selection is limited to about 10,000 volumes. Most of the cadets take advantage of this privilege, and they read about 50 per cent of the issue books, and the other 50 per cent are read by the officers and their families and other occupants of the post—particularly soldiers. Authors in fiction (Kipling, Crane, Churchill, Merriman, Ford, and Wallace), military authors (Jomini's Napoleon, Sargent's Napoleon's First Campaign, and Crane's Fifteen Decisive Battles), and scientific books (descriptive geometry, electricity, telephone, etc.), are in greatest demand.

The Academy has an annual appropriation of $2,000 for books, periodicals, and binding, and $200 for furniture; but last year there was an increase of $200 for binding periodicals. Purchases are made in open market by the Superintendent on the recommendation of a board composed of the professors of philosophy, chemistry, engineering, modern languages, and drawing, though quite a number of books are presented to the library. During the past year the increase was about 1,500 volumes, of which 500 were gifts—such as public documents, etc.

Professor Michie is quite anxious to build up the military and historical sections of the library, but the limited appropriations are a serious handicap in the matter. Such books are of great importance to the student of military science, and an increase in the annual appropriation for the purchase of books is recommended. The increased space will accommodate treble the number of volumes at present in the library, and also give room for the display of the large number of maps and charts, which were heretofore almost entirely unavailable on account of the cramped condition of the building.

The cataloguing by card of the books and pamphlets of the library has recently been completed by Dr. Plate, the assistant librarian, who seems a most efficient and valuable librarian, and is highly spoken of by Professor Michie.

A small select library has been placed in the dialectic hall to serve as an example of a small professional library which a young officer desirous of keeping abreast of his profession should acquire. A list of military works, taken from one published by Lieutenant-Colonel Wagner, has also been published as an aid to cadets who, after graduation, may desire to accumulate a useful military library without an unnecessary expenditure of time and money. This is another indication of the thoughtful care exercised in every department to aid and direct the cadets, not only in their present surroundings, but afterwards.

### CADET LAUNDRY.

The laundry, which is run by steam, was established in 1865, rebuilt in 1869 when it was destroyed by fire, and enlarged in 1888. Its work has since outgrown its capacity and it needs further enlargement; a new and larger mangle is required and a new drying room on the second floor. The work performed at the laundry averages over half a million pieces annually. Cadets and officers are charged a moderate amount for the work done at the laundry—just enough to make the plant self-supporting. There is no restriction in the amount of clothing that may be sent to the laundry, and there is consequently a a wide range in the amount of the bills of the individual cadets. The employees are paid out of the receipts. Complaints have occasionally been made of the laundry work, due, it is reported, to the difficulty in securing a sufficient number of skilled employees, but the general indications are of much good work well and reasonably done.

### HOSPITALS.

Cadet hospital.

This hospital is under the charge of Maj. J. M. Banister, surgeon, U. S. A., who has been at West Point since October 27, 1898, and he seems to be admirably suited for the position. The hospital was in excellent condition and police throughout, but is not yet provided with an isolation ward and is generally considered inadequate in accommodations for patients.

The operating room, which has but recently been fitted up with the most modern appliances, deserves special mention for its elegance in appointments, completeness of details, thorough equipment, and extreme cleanliness and neatness. It is airy and well lighted and will compare favorably with the best-appointed operating room of any of the public institutions in the country. It was a pleasure to inspect it. The latest and most modern appliances in the way of sterilizers, cabinets, operating table, etc., were furnished by the medical department, and over $2,000 were expended during the year in fitting it up.

During the eighteen months Dr. Banister has been in charge, he has performed 82 surgical operations, including 15 for the radical cure of hernia, 6 for appendicitis, 2 amputations of the leg, 16 operations for the radical cure of varicocele, several for phimosis, removal of necrosed bone, etc., without the loss of a single patient, each operation being followed by complete recovery. Dr. Banister has made a special study of ophthalmology and, in addition to the operations above mentioned, he has treated 235 official refraction cases, of which 37 occurred among officers, 127 among cadets, 17 among enlisted men, and 53 among members of families and employees. He reported that the prevalence of eye strain among the cadets has been a source of trouble, and, believing that the lighting of the cadet barracks is at fault, has suggested that the gas-burners suspended above the table in the center of each room be replaced by a Welsbach burner in the form of a drop-light with green porcelain shade. I concur in this suggestion, and furthermore believe that it would be a saving in gas, which is manufactured at the post and charged to the cadet at the rate of about 35 cents per month. The light furnished has heretofore excited remark at the Military Academy. The distance of the light from the books, as the square of the distance is involved, should also be considered; and perhaps eye shades would be beneficial.

The subject of enlarging the cadet hospital by building a south wing corresponding to the present north wing, as contemplated in the original plan, and adding an isolation ward has been repeatedly urged, and the inadequateness of the present hospital accommodations was severely felt during the two epidemics of scarlet fever and influenza which occurred last year, and emphasize the necessity of early remedial action. In this connection the following is quoted from the report of the surgeon of last year:

> There is no isolation ward in the building for the treatment of infectious diseases, and no means of caring for suspicious cases, except in the general wards. I called attention to this in a previous report to the superintendent just before the meeting of the Board of Visitors in June, and then made the statement that if an epidemic of some serious infectious disease, as measles, scarlet fever, or diphtheria, should attack the corps of cadets matters would assume a very serious aspect, owing to our limited accommodations for such cases at the cadet hospital.
>
> The calamity referred to has befallen us, and the corps of cadets is now threatened with a serious epidemic of scarlet fever. There are nine cases of this disease at present in the hospital, and we are compelled to place them in a room intended for convalescents, with no sewerage or water connections. If a few more cadets should have the disease there would be no room in this hospital for them. I earnestly recommend the construction of a detached building in the rear of the cadet hospital for the treatment of infectious diseases. Such a building should contain two wards (one for definite cases of infectious diseases and one for suspected cases), together with dining room, kitchen, attendant's room, and water-closets. It would be manifestly out of the question to put suspicious cases in the same ward with well-marked cases of contagious disease, as such action would almost certainly cause infection of the former, if not already infected; and, on the other hand, it would on obvious grounds be dangerous to the other patients to place these suspicious cases in the general wards.
>
> We have been compelled to run this danger during the present invasion of scarlet fever in so far as the general ward has been concerned.

Nothing has been done since these conditions were reported, and a recurrence of an epidemic might not terminate as fortunately as that of last year, so it seems some precautionary measures are absolutely necessary. The letter books kept at the hospital were not indexed.

The cost of the hospital to the cadet may have attracted attention. In other matters also the expenses weigh heavily upon the individuals, especially during the first year and furlough year and when graduating. Thrift and economy and avoidance of debt is doubtless taught. Perhaps bearing other items, like the iron bunks, upon the returns, or making the money allowance equal that of naval cadets, would insure much-needed relief.

A copy of the bill of fare served at the hospital for the first six days of May is submitted herewith.

Soldiers' hospital. This hospital is under charge of Asst. Surg. F. R. Kemp, U. S. A., who has been on duty here for about eight or nine months. The hospital-corps detachment, which presented a good appearance, consists of 2 stewards and 7 privates. There is also a matron. Everything in and about the hospital was in thorough police, and instruments and supplies in excellent condition. The ambulance is of the old style, but serviceable and fully equipped. There were 15 patients in the hospital and 4 sick in quarters at date of inspection.

The hospital is in need of painting inside and out, and the cellar of the hospital steward's quarters is reported damp, and should be repaired.

### COMPANIES AND DETACHMENTS.

Company E, Battalion of Engineers. This company is commanded by Lieut. H. Burgess, Corps of Engineers, and consists of 105 enlisted men, which is 45 less than its authorized strength. The barracks of the company are entirely too small for the authorized strength of 150 men, and even with the present number, despite the fact that 22 men of the company are married and sleep out of quarters, the garret has to be used as a dormitory, though it is hardly fit for that purpose.

The barracks were in excellent police, and all regulations and orders referring to arms, clothing, and bedding are carefully carried out. The instruction and behavior of the men seemed very good.

Cavalry detachment. This detachment is commanded by Capt. Geo. H. Sands, Sixth Cavalry, and has a total enlisted strength of 76 men, who are primarily used for the instruction of the cadets. They have but little opportunity for drill, and principally act as grooms for the horses belonging to the academy, and as drivers for the light-artillery drills, care for the guns, harness, and equipment required for drills and cavalry exercises of the cadets, and perform guard and patrol duty. Perhaps it would be advantageous to assign a battery of light artillery to this post, and relieve the cavalry detachment from all duties connected with light-artillery drills.

The barracks and stables were in excellent police, and everything seemed to be in very satisfactory condition. The stable should have an addition which could be used for new horses for purposes of observation and also for sick animals. There is no veterinary surgeon at the post.

Horses. The cavalry detachment cares for 99 public horses, nearly all of which require weeks of training before they can be used by the cadets. The mounts are generally unbroken to the saddle. Quite a difference was noted in the color and age of the animals, there being no less than seven distinct colors among them, bay predominating; and their ages ranged from 6 to 19, and averaged about 9 years. The difference in height was less noticeable, the smallest being 15½ and the tallest 16 hands high. In 1893 in one regiment of cavalry a difference of several hands was reported in the height of horses, the extremes being nearly 12 and 17 hands. The improvement generally has been great in recent years and should be carefully maintained. When supplied with both artillery and cavalry horses, better training and results will be feasible. The pulling and leaping muscles and type of animal are so distinct that it is a pity to habitually mix the demands made upon such horses.

Army-service detachment.

This detachment numbers 129 enlisted men. They are not armed or equipped as soldiers, but are enlisted as clerks, mechanics, school teachers, musicians, teamsters, and laborers, and work eight hours per day. Until April 26, 1898, these men received extra-duty pay varying from 25 to 50 cents per day, according to the nature of the work performed by them. The loss of this extra-duty pay inflicts great hardship upon many of them; and their length of service and valuable services rendered in their various lines of occupation warrant a return to the status of extra pay that existed for fully half a century prior to April, 1898.

Everything in and about the quarters of these men was in excellent condition. A convenient feature connected with the porches of the barracks consisted of a series of lockers for storing the working clothes of the men who sleep in the barracks.

Ordnance detachment.

This detachment is under Capt. O. B. Mitcham, of the Ordnance Department, and consists of 13 enlisted men, who perform duties of a mechanical order connected with target, ammunition, and other ordnance material, and are present at all cadet drills where ammunition is used or mechanical maneuvers practiced. The detachment presented a very good appearance, and their barrack, store rooms, and shops were in excellent order and police.

## ORDNANCE DEPARTMENT.

This is under charge of Capt L. L. Bruff, of the Ordnance Department. There is no ordnance-sergeant at the post.

The armament consists of one 8-inch B. L. rifle, mounted on an A. R. fire barbette carriage; four 5-inch siege rifles; two 7-inch siege howitzers, mounted on barbette carriages (wheel); one 12-inch steel mortar, carriage model of 1891; six 7-inch steel siege mortars, carriage model of 1895; six 8-inch converted rifles, and one 8-inch, five 10-inch, and one 15-inch smoothbore guns. The converted rifles and smoothbore guns are mounted on old-style barbette carriages, except the 8-inch smoothbore, which is unmounted. There are also 12 field guns, 1 Cohorne mortar, 5 Gatling, and 1 Gardner gun; and 1 each of the Maxim automatic (caliber .45), Hotchkiss, Nordenfelt and Maxim semi-automatic (all 3 pounders), and 1 Driggs-Schroeder (6 pounder) pattern. These rapid-fire guns are not carried on the ordnance return, but are reported as the property of the academy.

The following defects were noted at inspection of machine-gun battery: Two Gatling guns, caliber .30, mounted on model 1895 carriages. Traversing clamp defective, likewise clamp on elevating lever, and the mechanism for securing the cap squares not satisfactory. At the sea-coast battery it was noted that the traverse circle of 8-inch B. L. R. was not graduated.

The battery used in the instruction of the cadets is in many respects just such a battery as might have been expected a decade or two ago.

It has not kept abreast of the progress of seacoast artillery made in the past five years, and no depression position finder has been installed, though the high site lends itself with peculiar fitness to its use.

A modern battery complete in all its details and furnished with all modern appliances should be provided. The modern coast artillery is a comparatively new and progressive branch of our defenses, and as many of our artillery officers have not yet had the opportunities of thorough instruction, it would seem advisable that the cadets should be fully instructed.

An additional magazine for storing filled shells, rockets, primers, and fixed ammunition seems needed, as the ordnance officer, under present conditions, is compelled to place them in the powder magazine, contrary to regulations.

The ordnance museum is very interesting and instructive. It would seem in every way beneficial if under similar skillful direction every agricultural college or institution where an army officer is detailed was given a collection from the obsolete articles needlessly crowding certain arsenals and now to be disposed of.

## SUPPLY DEPARTMENTS.

Quartermaster's department.

The quartermaster of the Military Academy is First Lieut. M. H. Barnum, Tenth Cavalry, and he is also the post quartermaster and commissary, and in all the positions held by him seems thoroughly competent and energetic. He is assisted by Post Q. M. Sergt. Frederick Reissman, who is well spoken of.

The civilian employees, comprising clerks, master of the sword, teacher of music, assistant librarian, engineers, firemen, and others of a mechanical or technical character number 33, at an aggregate compensation of nearly $2,800 per month.

The transportation consists of 169 horses and mules and 40 vehicles and several handcarts. The animals seemed well cared for and the department in excellent condition.

Additions and improvements to buildings were made during the past year at a cost of about $35,000, and included officers' quarters, cavalry stables, cadet hospital, engineer barracks, refrigerating plant, crematory, and new kitchen.

Subsistence department.

The commissary department is located in an old storehouse which has been converted for the purpose and is not fit for its present use. Its location is also inconvenient, being remote from some of the barracks and most of the quarters. A new storehouse with the necessary conveniences should be provided and located at a more central point. The department is efficiently managed by Lieutenant Barnum and Com. Sergt. Frederick Meister, who has an excellent character and has been over twenty-five years in the service.

The bakery building is too small and not suitable; the walls are spreading and it is in a bad state of repair and objectionably located, being in the immediate vicinity of the water-closets of the engineer company. One of the ovens also is unserviceable. It would seem to be economy to replace the present bakery by a model building, which would not only meet the needs of the post, but also serve as an object lesson to cadets.

### CONCLUSION.

In addition to the needs of the post mentioned in the report, covering enlargement of the engineer company barracks, new roof for the academic building, new post bake house, addition to stables, assignment of light battery, modern battery for instruction purposes, new north dock, new hotel, more officers' quarters, increased water supply, electric-light plant, remodeling cadet mess hall, new post commissary building, and other matters of minor importance and less expense, some provision should be made for properly stabling the horses of officers. At present they are stabled wherever there may be room, which frequently results in annoyance and great inconvenience. It may also be advisable to restore old Fort Putnam from an historic interest.

In view of the fact that the post and Academy have seen a wonderful growth and development since their establishment, and may see still more in the future as the Army expands and a larger number of cadets is instructed, it is also suggested that some thought be given to the probable enlargement of the post by preparing a definite plan on which future improvements and additions can be made so as to obviate all haphazard locations and patchwork. Some of the present buildings are inconveniently located or have been added to from time to time, which could have been avoided had such a plan been in existence. One of the professors at the Academy has given this subject considerable thought and actually prepared a plan, but it is the plan of only one man. To make the proposition satisfactory and feasible it is suggested that a board of officers be appointed to consider the subject and prepare a plan, which, if accepted and approved by the Secretary of War, shall guide in all future additions or improvements.

It was understood that no matters affecting the curriculum were to be considered in this report. And it is hoped that the restrictions intended to be imposed have in no particular been disregarded. The usual effort to see between reveille and lights out at least a sample of every person, thing, place, disbursement, or duty there accessible during inspection and within its purview was faithfully made during this last inspection of this century. If general inspection is to continue in the Army the cadet should be familiar with it as of yore. And if the inspection were as free and full as possible, only additional commendation would be won for the work being done and warm admiration for the perfection of much of it, and equal encouragement offered for the highest improvement of all matters that attract attention.

For detailed information on many matters attention is invited to the inclosures submitted herewith.

Very respectfully,
J. C. BRECKINRIDGE,
*Inspector-General.*

The ADJUTANT-GENERAL, UNITED STATES ARMY.

| Per cent of total | ..... | ..... | .............. | ..... | .940 | ..... | .018 | ..... | .047 |

The summaries of transactions in inspections of money accounts for the decade 1891–1900 show (as exhibited in Table A) that for that period the total amount involved was $1,183,729,647.32; the extremes of the various annual amounts involved were $350,855,522.73 in 1899 and $62,156,805.13 in 1891, and the average annual amount involved was $118,372,964.73. The balances taken up for the decade amounted to $66,067,584.01; and the extremes were $22,140,624.25 in 1900 and $4,006,495.08 in 1894, and the annual average was $6,606,758.40. The total receipts from the Treasury were $746,413,071.30, and the extremes were $223,284,070.22 in 1899 and $40,774,383.63 in 1898, and the annual average was $74,641,307.13. The total receipts from sales and other sources were $30,728,167.29; the extremes were $9,100,570.29 in 1900 and $1,737,444.20 in 1891, and the annual average was $3,072,816.73. The total receipts by transfers from other officers were $340,520,824.32; the extremes were $117,756,893.53 in 1899 and $12,466,846.78 in 1893, and the annual average was $34,052,082.43. It appears noticeable that the volume of transfers was nearly ten times as great in 1899 as in 1893, though the receipts from the Treasury were less than six times the minimum.

For the decade the total amount of disbursements inspected was $726,594,524.03; the extremes were $184,497,349.87 in 1899 and $41,567,617.16 in 1891, and the annual average was $72,659,452.40. The total transfers to other officers were $337,515,197.09; the extremes were $130,788,963.87 in 1899 and $10,760,575 in 1894, and the annual average was $33,751,519.71. The total deposited to the credit of the Treasurer of the United States was $34,512,439.77; the extremes were $13,678,631.99 in 1900 and $843,217.17 in 1891, and the annual average was $3,451,243.98.

The total credits during the decade were $1,098,622,160.89; the extremes were $326,249,758.91 in 1899 and $55,699,734.14 in 1891, and the annual average was $109,862,216.09.

The total of balances remaining on hand for the decade was $85,107,486.43; the extremes were $24,605,763.82 in 1899 and $3,737,047.92 in 1893, and the annual average was $8,510,748.62.

Of the distribution of this balance there was during the decade a total in the United States Treasury of $66,455,130.32; the extremes were $20,185,780.48 in 1899 and $2,881,336.58 in 1894, and the annual average was $6,645,513.03. The total in United States depositories was $14,559,758.15, and the extremes were $2,739,560.32 in 1899 and $760,422.50 in 1893, and the annual average was $1,455,975.82.

For the decade the total of the cash remaining on hand was $4,089,781.33; the extremes were $1,763,001.83 in 1900 and $14,666.54 in 1898, and the annual average was $408,978.13. The total cash on hand for the decade was about one-half of 1 per cent of the total disbursements for the same period.

For the decade the relation between the total amount involved and the disbursements, transfers between officers, deposits in the Treasury, and final balances on hand were as follows: Disbursements, 0.614 per cent of the total amount involved; transfers between officers, 0.285 per cent; redeposited in Treasury, 0.029 per cent; balances on hand, 0.072 per cent.

The average monthly disbursements of officers of the Army for the decade was $6,054,954.37; and their average final balances for the same period represented 140 per cent of this average.

Table B shows that for the decade there were 4,958 officers inspected in 11,732 inspections, an annual average of about 496 officers and 1,173 inspections. Of these inspections 8,009, covering $1,112,347,888.39 (0.94 per cent of the entire total involved), were inspected by officers of the Inspector-General's Department, an annual average of 801 inspections and $11,234,788.84; 2,375 inspections, covering $15,284,852.76 (0.013 per cent of the entire total involved), were inspected by other officers, an annual average of 238 inspections and $1,528,485.28; and 1,345 inspections, covering $56,096,906.17 (0.047 per cent of the entire total involved), were statements verified by inspectors-general, made under paragraph 877 of the Army Regulations, an annual average of 134 inspections and $5,609,690.61.

The extreme numbers of officers inspected were 737 in 1900 and 420 in 1897. The extremes of inspections were 1,516 in 1892 and 713 in 1898; by inspectors-general, 1,152 in 1900 and 526 in 1898; by other officers, 564 in 1891 and 6 in 1898 and 1899; under paragraph 877 of the Army Regulations, 258 in 1899 and 88 in 1892.

The large number of inspections in each of the first five years of the decade was due to the fact that there were then much more frequent minor inspections of post quartermasters and post commissaries than there were in the last five years. When inspection districts were established in 1895 it was directed that post staff officers should be inspected once a year by the inspector at his annual inspection of the post. In the first half of the decade many of the inspections of accounts made by officers other than regular inspectors were of post quartermasters and commissaries, and while these officers in the first five years of the decade made 2,329 inspections of disbursements, an average of about 482 a year, they made only 49 such inspections during the whole of the last five years, an average of about 10 a year.

## APPENDIX F.

*Statement showing property inspected and condemned, and retained in service, compiled from reports received during fiscal years 1900 and 1899.*

| Average[3] | 1,040 | 99 | 896 | 2,035 | 243,870.45 | 1,752 | 210,963.23 | 283 | 32,907.22 |
| Per cent of total | .51 | .05 | .44 | ........ | .............. | .86 | .86 | .14 | .14 |

[1] Cost is partly as reported and partly estimated.

[2] No reports were received at this office prior to February, 1892, and the figures for the fiscal year 1892 are for about five months only.

[3] Average for eight and one-half years.

It appears that prior to 1892 no record was ever kept of the total amount and value of public property pertaining to the military establishment that was inspected and condemned; nor of the value of that which was presented for condemnation, but which upon being inspected was found more or less serviceable, either with or without repairs, and was consequently retained in the service. But General Orders, No. 8, Adjutant-General's Office, January 29, 1892, required one copy of each inventory and inspection report to be forwarded in all instances to this office; and since that time they have been handled and tabulated here so as to indicate this important and necessary information. The copies of the inventory and inspection reports began to reach this office about the 1st of March, 1892, the earliest bearing date February 10 of that year; so the figures presented in Tables A and B do not entirely cover all the last decade of the century, but they do cover about eight and one-half years, and it is upon this basis that the averages have been calculated. In the beginning the cost price of a great many articles was not stated in the reports, so the original value of the articles of which the cost was not stated had to be estimated upon the basis of the average value of those articles of which the cost was stated. For several years the original cost of most of the articles presented for inspection has been shown by the reports.

Leaving out of consideration (except in totals, averages, and percentages) the fiscal year 1892, for which data for less than six months is available, and considering only the fiscal years for which full data is given, Table A shows that for the period covered 19,847 inventory and inspection reports were received, the extremes being 3,521 in 1900 and 1,592 in 1898, the annual average being 2,335. Of these reports 14,060 (71 per cent) were acted upon by officers of the Inspector-General's Department; extremes, 2,100 in 1899 and 1,177 in 1898; annual average, 1,654. Special inspectors acted upon 5,787 (29 per cent) of these reports; extremes, 1,721 in 1900 and 293 in 1897; annual average, 681. A total of 79,816,330 articles were presented for inspection; extremes, 54,134,386 in 1900 and 1,775,059 in 1893; annual average, 9,390,156. The total cost of all the articles presented was $20,742,319.28; extremes, $10,009,897.93 in 1900 and $630,368.86 in 1893; annual average, $2,440,272.85. The total cost of the articles condemned was $16,898,442.16 (81 per cent of the whole); extremes, $8,689,350.88 in 1900 and $427,695.70 in 1893; annual average, $1,988,052.02. The total cost of the articles retained in the service was $3,843,677.12 (19 per cent of the whole); extremes, $1,320,547.05 in 1900 and $92,816.86 in 1894; annual average, $452,220.83.

Table B shows that for the period covered a total of 17,296 public animals were presented for inspection; extremes, 6,737 in 1899 and 997 in 1894; annual average, 2,035. Of these, 8,839 (51 per cent of the whole) were cavalry horses; extremes, 2,734 in 1899 and 588 in 1894; 838 (5 per cent of the whole) were artillery horses; extremes, 237 in 1900 and 51 in 1895; annual average, 99; 7,619 (44 per cent of the whole) pertained to quartermaster's transportation, etc.; extremes, 3,866 in 1900 and 317 in 1895; annual average, 896. The total cost of animals presented for inspection was $2,072,898.81; extremes, $693,911 in 1898 and $138,427.54 in 1895; annual average, $243,870.45. The total number of animals condemned was 14,889 (86 per cent of the whole); extremes, 5,578 in 1899 and 898 in 1894; annual average, 1,752. The total cost of public animals condemned was $1,793,187.48 (86 per cent of the whole); extremes, $574,534 in 1899 and $125,445.89 in 1894; annual average, $210,963.23. The total number of public animals retained in service was 2,407 (14 per cent of the whole); extremes, 1,159 in 1899 and 66 in 1895; annual average, 283. The total cost of public animals retained in service was $279,711.83 (14 per cent of the whole); extremes, $119,377 in 1899 and $8,484.88 in 1895; annual average, $32,907.22.

## APPENDIX I.

*Inspectors-General of the United States Army from 1778 to 1900.*

| Names. | Rank. | From— | To— | Remarks. |
|---|---|---|---|---|
| Frederick Wm. von Steuben. | Major-general. | May 5, 1778 | Apr. 15, 1784 | He was presented a gold-hilted sword "as a mark of the high sense the Congress entertain of his character and services." Died Nov. 28, 1794. |
| William North ...... | Major ...... | Apr. 15, 1784 | June 25, 1788 | Brigadier-general, adjutant-general, July 19, 1798. Died Jan. 4, 1836. |
| John Stagg, jr ....... | Chief clerk War Department. | June 25, 1788 | Apr. 30, 1790 | Brigade major in the Revolutionary army. Died Dec. 28, 1803. |
| Francis Mentges..... | Colonel..... | Apr. 30, 1790 | Mar. 17, 1792 | Lieutenant-colonel in the Revolutionary army. |
| Henry de Butts...... | Captain..... | Mar. 17, 1792 | Sept. 17, 1792 | Entered the service as ensign in the levies of 1791. |
| Edward Butler...... | .....do...... | Sept. 17, 1792 | Feb. 21, 1793 | Lieutenant in Revolutionary army. Served in St. Clair's campaign, 1791. Died May 6, 1803. |
| Michael Rudolph.... | Major ...... | Feb. 22, 1793 | July 17, 1793 | Brevetted by the Continental Congress for gallantry in leading the forlorn hope at Paulus Hook in 1779. Died 1795. |
| Edward Butler...... | Captain .... | July 18, 1793 | May 13, 1794 | (See above.) |
| John Mills........... | Major ...... | May 13, 1794 | Feb. 27, 1796 | Captain in the Revolutionary army. Died July 8, 1796. |
| Jonathan Haskell ... | .....do...... | Feb. 27, 1796 | May 22, 1798 | Lieutenant in the Revolutionary army. Died Dec. 13, 1814. |
| Edward Butler...... | Captain .... | May 22, 1796 | Feb. 27, 1797 | (See above.) |
| Thomas H. Cushing . | Major ...... | Feb. 27, 1797 | May 22, 1798 | Captain in the Revolutionary army. Brigadier-general, United States Army, July 2, 1812. Died Oct. 19, 1822. |
| Alexander Hamilton | Major-general. | July 19, 1798 | June 15, 1800 | Colonel in the Revolutionary army and principal aid-de-camp to Washington. He was also Commander in Chief of the United States Army during a portion of the time he was Inspector-General. Secretary of the Treasury under Washington. Died July 2, 1804. |
| Thomas H. Cushing . | Major ...... | June 15, 1800 | May 9, 1807 | (See above.) |
| Abimael Y. Nicoll... | .....do....... | Apr. 2, 1807 | Apr. 28, 1812 | |
| Alexander Smyth ... | Brigadier-general. | July 6, 1812 | Mar. 3, 1813 | Was in command of troops in Canada in war of 1812. Member of Congress from Virginia for several terms. Died April 26, 1830. |
| Zebulon M. Pike[1] ... | .....do...... | Mar. 12, 1813 | Apr. 27, 1813 | Killed in the attack on York (now Toronto), Canada, after the capture, by the explosion of the magazine. |
| Abimael Y. Nicoll... | Colonel..... | Mar. 18, 1813 | June 1, 1814 | Resigned from the army June 1, 1814. |
| William H. Winder.. | Brigadier-general. | May 19, 1814 | July 2, 1814 | Commanded American forces at Bladensburg and in defense of Washington in 1814. Died May 24, 1824. |
| Daniel Parker........ | .....do...... | Nov. 22, 1814 | June 1, 1821 | Paymaster-General of the Army June 1, 1821, to May 8, 1822. Died April 5, 1846. |
| John E. Wool........ | Colonel..... | June 1, 1821 | June 25, 1841 | (Senior Inspector-General.) Brigadier-general, June 25, 1841; major-general, May 16, 1862. Brevetted 1814 for gallant conduct in the battle of Plattsburg, in 1826 for ten years' faithful service in one grade, and in 1847 for gallant and meritorious conduct in the battle of Buena Vista, for which he was also thanked (1854) and awarded a sword by resolution of Congress. Died Nov. 10, 1869. |

[1] From the death of General Pike the office of Adjutant and Inspector-General remained vacant (the duties being performed by Col. Abimael Y. Nicoll, Inspector-General) until May 19, 1814, when Gen. W. H. Winder was appointed, and held the office until July 2, after which the office was again vacant until Nov. 22, 1814, when Daniel Parker was appointed.

*Inspectors-General of the United States Army from 1778 to 1900*—Continued.

| Names. | Rank. | From— | To— | Remarks. |
|---|---|---|---|---|
| George Croghan | Colonel | June 25, 1841 | Jan. 8, 1849 | (Senior Inspector-General.) Presented a gold medal "with suitable emblems and devices in testimony of the high sense entertained by Congress of his gallantry and good conduct in defense of Fort Stephenson. Ohio," in 1835, and brevetted for same in 1813. Died Jan. 8, 1849. |
| Sylvester Churchill | do | Jan. 8, 1849 | Aug. 9, 1861 | (Senior Inspector-General.) Brevetted 1847 for gallant and meritorious conduct in the battle of Buena Vista. Died Dec. 7, 1862. |
| Randolph B. Marcy | do | Aug. 9, 1861 | Dec. 11, 1878 | (Senior Inspector-General.) McClellan's chief of staff. Brevetted brigadier-general 1865 for gallant and meritorious service in the field during the civil war, also major-general of volunteers for faithful and meritorious service during the war. Died Nov. 22, 1887. |
|  | Brigadier-general. | Dec. 12, 1878 | Jan. 1, 1881 |  |
| Delos B. Sackett | do | Jan. 2, 1881 | Mar. 8, 1885 | Brevetted 1846 for gallant and meritorious conduct in the battles of Palo Alto and Resaca de la Palma, and in 1865 brigadier-general for gallant and meritorious service in the field during the war, and major-general for faithful and meritorious services during the war. Died Mar. 8, 1885. |
| Nelson H. Davis | do | Mar. 11, 1885 | Sept. 20, 1885 | Brevetted 1847 for gallant and meritorious conduct in the battles of Contreras and Cherubusco, in 1863 for gallant and meritorious conduct in the battle of Gettysburg, in 1864 for gallant and meritorious service in action with Apache Indians in Arizona, in 1865 (brigadier-general) for meritorious and efficient service during the war. Died May 15, 1890. |
| Absalom Baird | do | Sept. 22, 1885 | Aug. 20, 1888 | Brevetted 1863 for gallant and meritorious service in the battle of Chickamauga, Ga., in 1863 for gallant and meritorious service in the battle of Chattanooga, Tenn., in 1865 (brigadier-general) for gallant and meritorious service in the capture of Atlanta, Ga., also in 1865 (major-general) for gallant and meritorious service in the field during the war, and major-general of volunteers for faithful service and distinguished conduct during the Atlanta campaign, and particularly in the battles of Resaca and Jonesboro, and for general good conduct in the command of his division against Savannah. |
| Roger Jones | do | Aug. 20, 1888 | Jan. 26, 1889 | Died Jan. 26, 1889. |
| Joseph C. Breckinridge. | do | Jan. 30. 1899 | .............. | Brevetted in 1864 for gallant and meritorious service in battle before Atlanta, Ga., and in 1865 for gallant and meritorious services during the war. Major-general of volunteers, May 4, 1898; was in Cuba with Lawton's division during the Santiago campaign and in the actions at El Caney and Bloody Ford (where his horse was shot under him) and at San Juan Hill. Was assigned to the command of the separate army in the field at Camp George H. Thomas, Georgia, composed of 44,000 men, and on the breaking up of that camp commanded all the First Army Corps within the United States, with headquarters at Lexington, Ky. Mustered out as major-general of volunteers Nov. 30, 1898. |

## APPENDIX J.

### ANNUAL MANEUVERS IN GERMANY.

The imperial military maneuvers in Germany in the autumn of last year were carried out on a very large scale, three army corps taking part in them. The theater of the mimic warfare was the northern portion of the Black Forest, in the Grand Duchy of Baden, the hilly country about Stuttgart, in the Kingdom of Wurtemberg, and the flat valley of the Rhine south of Strasburg. Parts of the terrane are very mountainous, others very flat, but, on the whole, the ground over which the troops were maneuvered is undulating and very varied and lends itself admirably to the carrying out of the operations of war. And it may be of interest to note a remark on the infantry, cavalry, artillery, and staff by Maj. Gen. A. E. Turner, C. B., R. A., published in the United Service Magazine of January, 1900:

> Throughout this vast army one system of training and the same degree of efficiency exist, and there is no perceptible difference in any essential point between the units of the same description throughout the length and breadth of the German Empire. * * *
>
> The principal events of the maneuvers took place on the 8th, 9th, 11th, and 13th of September. * * *
>
> The attack was carried out with marvelous precision, every roll of ground was utilized, and the advance of some 70,000 men on the position was, to a great extent, concealed. Certainly long practice and experience has made the German officer a wonderful leader of men.
>
> The general points most worthy of notice were the operations of the cavalry far in advance of the main body. Everything was searched. I have always, in the many accounts of German maneuvers, strongly dwelt on the excellence of this arm and on the high degree of energy and professional knowledge possessed by its officers, one and all, for an indifferent or careless officer does not remain long in the German army. Nor is the action of the cavalry by any means confined to what is called in German sicherheitsdienst and aufklärungsdienst. * * *
>
> What was principally remarkable about the artillery was the manner in which it was concealed; the low wheels of the new quick-firing gun, only 4 feet 6 inches high, facilitate this; long lines of guns come into action, the guns being run up into the firing position by hand without showing themselves to the enemy, while their sudden smokeless flash makes the task of finding the range to them one of the greatest difficulty. No cover which can be utilized is despised by the German army; and, as it is laboriously trained to use it, in real warfare it will enjoy an incalculable advantage over an enemy who is not an equal adept in thus protecting his soldiers, whose losses will be entirely out of proportion with its own.
>
> A most careful and lengthy reconnaissance is made of all positions to be attacked, and there is no premature hurry in the advance on them. * * *
>
> *The forward action of artillery.*—Since the war of 1866 the Germans have learned how to use their guns, and year by year they seem to push their artillery more and more to the front and to make it more and more the backbone and "regulator" of a battle. Each infantry division has six batteries, and the Times correspondent, whose letters on these maneuvers would form a most valuable and instructive pamphlet for military students, relates that the whole of these batteries on occasions marched with the advanced guards. The artillery thus comes very early into action at long ranges; it moves after a time to nearer positions, and finally when the assault is being delivered and the attention of the defenders mainly concentrated on the attacking infantry some of the batteries advance to the shortest ranges and fight almost shoulder to shoulder with the infantry, as the guard batteries did at St. Privat and the artillery generally at Beaune la Roland and Loigny Pourpy. The infantry advance never takes place till the preliminary preparations by the artillery is completed; that is, when the enemy's artillery is entirely or nearly silenced. Then its fire is directed on the points selected for the infantry attack. By this the loss of the latter is enormously lessened and their task lightened. * * *
>
> The infantry attack is thus delivered, the firing line in single rank extended at intervals of 1 to 2 paces march on the designated point of attack; the supports, similarly extended, follow at about 200 yards distance. There is little or no firing

till the firing line arrives to about 800 to 900 yards of the objective; here it halts, a heavy fire is poured in, and the supports close in. The reinforced firing line then advances by successive rushes by companies or half battalions to within about 500 yards of the position. In the meantime the second line, which is composed of innumerable small lines of companies, gradually closes up, all in single rank, drums beating and fifes playing. They appear to be moving independently, and the whole country seems covered with them; but with marvelous precision they slowly but surely converge on the objective of attack till they are arranged in a sort of formation of many lines opposite it.

The firing line, followed by the rest, then moves rapidly forward to within 300 yards of the enemy, and here a tremendous fire is poured in. The mass in rear is always closing up. Suddenly one of its companies, followed by all the others, rushes forward, and in a minute a huge swarm, apparently without any formation, rushes upon the enemy, the firing line supporting the assault with a rapid and ceaseless fire. The position is captured, and probably a second attack has to be made on a further one. After the rush it is evident that all cohesion of units must be lost. This condition of things is foreseen and constantly practiced; the men fall in under the nearest officers without any regard to their own companies or battalions or even to their brigades or divisions.

What strikes me perhaps most forcibly at German maneuvers is the enormous difficulty that our general staff labors under in producing useful and practical maneuvers which can give a real picture and tend to instruct our officers in the higher ranks, in comparison with those experienced by the military authorities in countries like Germany, in which the obligation to general service (Allgemeinwehrpflicht) exists, and following upon it the right by law to occupy, every year, a certain tract of country as a maneuver area, the whole resources of which are practically at the disposal of the troops for the time being. In the present instance the opposing forces were from 60 to 70 miles apart when they started. * * * As much transport as is required is impressed locally and well paid for. * * *

Other great advantages are possessed by military commanders in Germany, who go into the field of maneuvers or war with their own staffs and troops, which latter they have watched from the first day that the men joined as recruits and for whose training they are themselves responsible. * * *

As an artilleryman I shall, I hope, be pardoned, if I once more allude to my own arm and conclude by pointing out the enormous increase of power which the German army has obtained by the introduction of quick-firing guns. German artillery officers say that the power of their artillery is more than doubled. They can fire five aimed rounds a minute against two with their former very excellent gun. The ammunition is all "fixed" like a rifle cartridge, whether shrapnel or high explosive. The number of guns per army corps is now 138, and this is to be increased by the addition of howitzer batteries for bombarding covered positions and villages.

---

# APPENDIX K.

## WAR DOGS AND AUTOMOBILES.

That small but smartly written Swiss service journal, the Allgemeine Schweizerische Militär-Zeitung, in No. 44 of 1899, gives an excellent description of the annual trials of German war dogs for that year. The points observed in the trials were—

1. Behavior as watchdog (possible marks to be awarded, 6).
2. Returning from a patrol to the leader (possible marks, 5).
3. Going from the leader to the patrol (possible marks, 8).
4. Following the scent or tracks of the leader (possible marks, 6).
5. Lying down or sitting down by order and remaining still until called for by the leader, who in the meantime retired to a spot from whence he could not be seen by the dog (possible marks, 5).

It was not considered necessary to test the dogs in working on the leash, nor in "fetching," this latter accomplishment being of minor importance from a military point of view, and time failed for trials in carrying ammunition, or in looking for wounded, and barking when found. In order to conduct the trials, a company of a Jäger regiment took up position as a picket in a line of outposts.

Behavior as watchdog was tested in the following manner: A double sentry was posted on a road in grounds which could not be overlooked, and the dog and his leader were attached to this post for duty. Two Jägers, dressed to represent an enemy's patrol, then attempted to creep up to the post unperceived from a distance of 300 meters. In the course of the test seven dogs gave due notice of the enemy's approach by growling, five took no notice at all, and four made too much noise and were accordingly awarded half marks only.

For sending messages four dogs at a time were sent by patrols from the picket to four distinct points determined on beforehand, the old dogs to travel a distance of 3 kilometers, the young ones 2½ kilometers, partly along roads, partly through woods, and partly across open cornfields. The dog-leaders remained with the picket. Each dog had to carry messages as follows:

1. From the patrol to the picket.
2. From the picket to the patrol.
3. Back again from the patrol to the picket.
4. From the picket back to the patrol, which by this time had changed position (after sending the dog away the second time) about 300 meters.

Each dog carried in a leathern dispatch pouch a regular form in which the time of departure from and arrival at each post was noted down for each journey, in order to show the length of time taken in carrying the messages. A great improvement was shown in the certainty with which dispatches were carried as compared with the results of the previous years' trials. On an average the kilometer was covered by the dogs in four and one-fourth minutes. Out of 16 dogs which took part this year in the trials, 6 distinguished themselves by their speed. One was not tested in carrying dispatches. All the remainder went well enough from the patrol to their leader at the picket, but did not return from picket to patrol. These latter were therefore struck out of the remainder of the competition as the umpires decided that the carrying of dispatches was the first and indispensable qualification for a "war dog," if he was to be of any real use.

As regards obedience in remaining where they were told, each dog had to remain still at a certain prescribed spot, either sitting or lying down, where he could not see his leader, for at least twenty minutes before the latter fetched him back.

During this test 6 dogs were disobedient, leaving the prescribed spot and returning to their leaders before they were called; the remainder stood the test perfectly. For the test of following the leader's trail, the latter were sent about 600 meters to the front, through wooded ground, and the dog, after the lapse of a few minutes, sent after him. Eight of the competitors failed to reach their leaders, either because they did not attempt to or because they lost the trail.

The following breeds of dogs took part in the trials: Five colleys, 2 German pointers, 4 sheep dogs, 2 Airedale terriers (crossed with German wire-haired terrier), 1 crossbreed (poodle and pointer), 1 crossbreed (setter and mastiff), 1 crossbreed (fox terrier and sheep dog). But the result of the trials tended to show that pure-bred dogs are the best for the purpose, and colleys seemed the most suitable of the various breeds, as they are speedy enough, easily taught, have good scent, and take no notice of game, this last point being of great importance. * * *

Automobiles.

France seems inclined to show other nations the way as regards utilizing automobiles for heavy military work. According to the Beilage zur Deutschen Heeres-Zeitung of the 4th November last, two artillery regiments stationed at Versailles succeeded in transporting a siege gun and ammunition, 25 tons weight in all, from thence to the plateau of Satory, over a road sloping 1 in 10, by means of automobiles, in an hour, a piece of work which would have taken three days to do with artillery horses.

## APPENDIX L.

### THE INSPECTOR-GENERAL'S DEPARTMENT.

[By Maj. J. P. SANGER, Inspector-General, U. S. A.]

The office of Inspector-General dates from December 13, 1777, although Lieut. Col. Mottin de la Balme, a French cavalry officer, was appointed by Congress July 8, 1777, inspector-general of cavalry; and on August 11 M. du Coudray, a French artillery officer, was appointed inspector-general of ordnance and military manufactures with the rank of major-general. It is not probable that either of these officers performed much service as inspectors, for the entire cavalry force consisted of but four regiments, used chiefly as escorts, messengers, and orderlies, while the ordnance and military manufactures were as yet unorganized. De la Balme resigned three months and three days after his appointment, and Du Coudray held his position about one month. He was drowned September 15, while attempting to cross the Schuylkill en route to army headquarters as a volunteer.

On October 26, 1777, General Washington assembled a council composed of 14 general officers, which met on the 29th, and among other questions submitted to it considered the following:

> Will the office of Inspector-General to our Army, for the purpose principally of establishing one uniform set of maneuvers and manual, be advisable as the time of the adjutant-general seems to be totally engaged with other business?

It was apparently the intention that each member of the council should submit his views in writing, but only those of General Sullivan on the subject of the inspectorship have been preserved, and in regard to that he wrote:

> Such an officer will answer an exceedingly good purpose, provided a person who is well versed in the maneuvers has the appointment, and the major and brigadier-generals themselves will take more pains to teach their men to move in large bodies, and perform such maneuvers as the Inspector-General will recommend. If the person appointed should only be acquainted with the trick of parade of a single company or regiment, and has not extended his ideas to the movements of armies, it will be rather a disadvantage than benefit to the Army.[1]

The final decision of the council, which every member signed, was that "such an officer was desirable, the manual of regulations to be first agreed upon by the Commander in Chief, or a board of officers appointed for the purpose." General Conway, one of the members, was born in Ireland but educated in France, and had served many years in the French army. He came over on an engagement with Messrs. Dean and Franklin, who described him as a soldier of high character and abilities, and one of the most skillful disciplinarians in France. He was commissioned brigadier May 13, 1777, joined the army under Washington, who assigned him to the command of a brigade, and participated in the battles of Brandywine and Germantown and the operations around Philadelphia. He now became an aspirant for the position of Inspector-General, and addressed letters to Congress proposing a plan of organization.

---

[1] Original manuscript, State Department.

These letters were referred to the board of war, which, on December 12, 1777, reported to Congress that they had considered the letters and that it was expedient to the promotion of discipline and to the reformation of the various abuses which prevailed in the different Departments, that an appointment should be made of an Inspector-General, whose duties should be to determine, with the consent of the Commander in Chief, the instruction, discipline, strength, and condition of all organizations, their accounts, rations, arms, and equipment, and the capacity of all officers; his reports to go to the board of war, and a copy to the majors of regiments, and all complaints and grievances to Congress.[1]

It was further resolved that two inspectors-general be appointed, which resulted in the election of Brig. Gen. Thomas Conway with the rank of major-general; the other was not chosen.

Fortunately for the discipline of the Army and the conduct of military operations, this plan of administering the inspectorship was not carried out. Its effect was to put the Inspector-General in direct communication with Congress and the board of war. In the hands of Conway, and the board of war as then constituted, such a weapon would have been irresistible, and Washington appears to have fully appreciated the danger. On the 2d of January, 1778, he wrote to the President of Congress opposing the appointment of Conway and transmitting an extract from the proceedings of the council of generals, in regard to which he wrote:

> The inclosed extract from the proceedings of a council of general officers will show the office of Inspector-General was a matter not of such modern date as General Conway maintains it to be, and that it was one of the regulations in view to reform the Army.
>
> The foreign officers who had commissions and no commands, and who were of ability, were intended to be recommended to execute it, particularly the Baron d'Arendt, with whom the idea originated, and whose capacity seemed to be well admitted.[2]

The Baron was a Prussian officer and colonel of the German regiment, and served as aid-de-camp to Washington. Conway held the office of Inspector-General until April 28, 1778, when he resigned.

Although Washington did not employ Conway as Inspector-General, he still gave heed to the duties of the office, which ever held a high place in his mind. In a letter of January 28, 1778, to the Congressional committee which visited his camp at Valley Forge, to mature a plan for the better administration of the Army, he wrote:

> In an army like ours the office of Inspector-General, principally for the purpose of instituting and carrying into practice an uniform system of manual and maneuvers, must be extremely useful and advantageous. A number of assistants to this office will be required, as one man would be incapable of superintending the practice of the rules laid down throughout the Army; and unless this were carefully done it

---

[1] Journals of Congress.

[2] Writings of Washington, Vol. VI.

would be of little avail to establish them. It would be proper, in my opinion, to have one to each brigade, the benefits resulting from which would greatly overbalance the consideration of expense.[1]

In the meantime, December 1, 1777, Lieutenant-General Baron von Steuben arrived at Portsmouth, N. H., and proceeded to York, Pa., where he tendered his services to Congress as a volunteer. He commenced his military life when a mere child, as the companion of his father, an engineer officer, and became aid-de-camp to Frederick the Great. Congress conferred on him the rank of captain by brevet, in order to guard against any inconveniences which might result were he taken prisoner, and he joined the Army under Washington at Valley Forge, February 23, 1778.

Shortly after his arrival he accepted the appointment of temporary inspector and entered on his duties. The condition of the Army—without sufficient arms, clothing, rations, medicines, money, organization, instruction or discipline—was deplorable in all respects. There was no uniformity, while the short terms of enlistment—three, six, and nine months—kept up a continual flow of men, who, as they left for their homes, carried off with them everything serviceable in their possession. These fluctuations destroyed the significance of divisions, brigades, and regiments, which bore no resemblance to such organizations. It was impossible to obtain correct returns of the troops, the arms, supplies, or, in fact, a reliable report of anything. Drill regulations of any kind were unknown; each colonel and general had a system of his own; there was no military code. The interior economy and administration of regiments and companies did not exist; quartermasters obtained supplies and issued them, when their responsibility ceased, while that of the captains was never assumed; hence deficiencies were not known or explained. Officers and men absented themselves at will; desertion was general, and jealousies, bickerings, misunderstandings, insubordination, extravagance, and waste of all kinds prevailed. Unfed, unpaid, insufficiently sheltered, and literally naked, the Army presented a picture of inefficiency almost beyond remedy. These conditions naturally suggested to such an experienced officer as Steuben the appropriate remedies, and although many of them were beyond his reach and he labored under the disadvantage of not knowing the English language, he set about his task.

To the defects he could not remedy he paid no attention, but devoted himself to completing the organization, instruction, and discipline of the troops. To this end he formed a guard for the General in Chief of 120 men drawn from the line, which he commanded and instructed in person, and which became a school for the inspectors and other officers. The men were completely uniformed, armed, and equipped, and their military bearing and general appearance received much attention. Impressed by their intelligence and aptitude, the short time for preparation, the voluntary and transitory character of the service, and the ill success of other foreign officers who had adhered strictly to European methods, Steuben very sensibly reversed the old system, and, as he says in his memoirs, instead of "eternal manual exercises," the purpose of which was not apparent, but which exhausted the patience of the recruits, he practiced them in simple maneuvers having a palpable object, and in such manner as to make plain the necessity for elementary drill. The good effects of this plan soon became manifest, and on March 28, about a month after he had reported to General Washington, the latter issued an order announcing that the Baron had "obligingly undertaken the exercise of the office of Inspector-General of the Army," and appointed Lieutenant-Colonels Davies, Brooks, Barber, and Mr. Ternant as subinspectors. This order was followed by others requiring colonels and regimental commanders to review and inspect their regiments weekly, brigadiers their brigades fortnightly, and major-generals their divisions. The inspectors were held responsible for the discipline of the troops, and that all instruction conformed strictly to that given by the Baron to the model company, and issued by him with the consent of the General in Chief.

---

[1] Writings of Washington, Vol. VI.

On April 30, in a letter to Congress, Washington explained the ill consequences arising from a want of uniformity in discipline and instruction throughout the Army, the necessity for a well-organized inspectorship, and what had been done up to that time by Steuben. In the month following he submitted a plan under which the business of the office was to form a system of manual and maneuvers; to prepare all necessary regulations for the government, discipline, and arrangement of the Army in all its branches; and to see that they were strictly observed. For this purpose the inspectors were to be considered "the instructors and censors of the Army in everything connected with its discipline and management;" the Inspector-General to be under the direction of the General in Chief, his deputies to have charge of the wings or divisions under the major-generals commanding, and the inspectors the brigades. He recommended Steuben for Inspector-General, also General Cadwallader, "of a decisive and independent spirit," Colonel Fleming, and the Barons Arendt and Holtzendorf as assistants.

As a result of this correspondence, Congress on May 5, 1778, approved the plan and appointed Baron Steuben Inspector-General with the rank and pay of major-general. It was also resolved "that there be two ranks of inspectors under the direction of the Inspector-General, the first to superintend two or more brigades, and the other to be charged with the inspection of only one brigade."

Steuben soon began to experience difficulties heretofore unknown. As long as he was a volunteer inspector, without military authority as such, there was no open opposition to his plan of exercises and inspections, to receiving instructions from him personally, or to his practice of turning out the troops for drill which he did at his volition. His appointment as major-general, however, caused much ill feeling among those who were below him in rank, and those of the same grade now objected to the privileges and authority previously exercised by him. Washington also, while fully appreciating the benefits to the Army that had resulted from his efforts, thought that too much authority might be prejudicial to the inspectorship as well as to discipline, and accordingly issued an order, June 15, 1778, specifying the duties of the inspectors, and requiring all rules and regulations to be first approved by him, and then either published in orders or communicated by his direction.

All exercises and maneuvers were to be executed under the immediate orders of the several commanders, the inspectors acting as assistants, and the maneuvers which the Baron had practiced were only to take place after orders specially issued in each case by the General in Chief.

Thus the extensive powers exercised by Steuben when his office was first established, and which were considered necessary in view of the exigencies of the case, were brought within proper limits and the safety of the inspectorship insured. That it would have been overthrown had not Washington placed a wise curb upon the ambition of the Inspector-General, or had he conceded to him the power of enforcing subordination, there can be little doubt. As stated by Alexander Hamilton, at that time aid-de-camp to Washington, in a letter of June, 1778, to Mr. Duer, a member of Congress from New York:

> The novelty of the office excited questions about its boundaries; the extent of its operations alarmed the officers of every rank for their rights. Their jealousies and discontents were rising to a height that threatened to overturn the whole plan.

Steuben continued at Washington's headquarters, where he was most useful. In the execution of his duties he met with obstacles which, according to Hamilton, "were thrown in his way by many of the general officers, incited to it by Lee and Mifflin," and inasmuch as he had not been able to induce Congress to adopt his ideas of the inspectorship, he now insisted on a permanent command, and seemed determined to leave the service altogether if it were not given him. Provided with a letter from Washington to the President of Congress, the Baron laid his case before that body. But he was not successful, and accordingly devoted himself again to his duties as Inspector-General.

Shortly after his arrival at Valley Forge Congress appointed a committee to confer with him. To this committee he submitted a project in which he discussed the causes which led to the establishment of the inspectorship, and in what manner it could best be made to conform with the genius of the people and the constitution of the Army.

Reasoning from the relation of the inspectors-general of France and Prussia, who were accountable to the King alone, he thought the Inspector-General should be answerable to the board of war, to which and the Commander in Chief he was to make a report of his inspections. In the event of differences between the Commander in Chief and the Inspector-General, Congress was to decide.[1] In other words, the Inspector-General was to be a staff officer of the board of war, and only in a qualified way under the control of the Commander in Chief.

This plan was referred to a committee of Congress which reported that, after fully considering it and consulting with the Baron, they recommended, in the form of resolutions, that there should be one Inspector-General with the rank of major-general, an assistant inspector-general with the rank of brigadier-general, subinspectors to be colonels and each to have the troops of three or four States, the offices of brigade major and brigade inspector to be united, and the regulations of the department to be as proposed in the plan. The second resolution, among other things, authorized inspectors to have the troops under arms whenever they desired. The eighth resolution made the Inspector-General and his assistants subject to the orders of Congress, board of war, and the Commander in Chief. The tenth resolution provided that every officer and soldier who so desired should have the privilege of presenting any complaints to the inspector.[2]

The report was referred to Washington August 20, who, with his usual penetration and sagacity, discussed the merits and weak points of the proposed plan and report.[2] He saw that, while it embraced many of the fundamental principles of inspections, it was fatally defective in establishing direct communication between the Inspector-General and the board of war; in making the Inspector-General independent of the Commander in Chief, and the subinspectors independent of the subordinate generals. His letters and observations, together with the report, were received in Congress September 15, whereupon it was—

[2] Original manuscript in State Department.

> Ordered that the report and observations be referred to the committee of arrangement, and that they be directed to prepare a plan of regulations for the inspectorship, agreeable to the said report and observations.[1]

On Thursday, February 18, the committee made its report, whereupon the following plan of organization and management for the department of the Inspector-General was agreed to: There should be an Inspector-General, who, in all future appointments, should be taken from the line of major-generals, and whose principal duty should be to form a system of regulations for drill and maneuver, service of guards and detachments, and for camp and garrison duty. Together with his assistants he was to review and inspect the troops and receive such returns as the Commander in Chief or officers in command might direct, reporting all defects and deficiencies to the officers ordering the inspection and to the board of war; all regulations whatsoever to be finally established by Congress, but the exigencies of the service requiring it, temporary regulations might be introduced by the Inspector-General, with the approval of the Commander in Chief, such regulations to be communicated to the Army by the Adjutant-General, and transmitted at once to the board of war for the action of Congress; to be as many subinspectors as the Commander in Chief or commander of a detachment, in view of the strength and situation of the Army, might deem necessary, to be taken from the line of lieutenant-colonels and to receive their instructions relative to the department from the Inspector-General; one inspector to each brigade, to be taken from among the majors and the office to be annexed to that of brigade major; that all the officers of the inspectorship having appointments in the line should retain their rights of command, succession, and promotion, but they should not exercise command except on particular occasions and by special assignment of the Commander in Chief; to be exempt from all duties except those of their office; the Inspector-General to be subject to Congress and the Commander in Chief only; and the subinspectors to be also subject to the orders of the division and brigade commanders on whose staffs they were serving.[1]

From this it appears that the views of Washington had been given due weight, and that the dangers to discipline, as well as those which threatened the inspectorship, had been carefully avoided.

On March 25 Steuben submitted to Congress a system of drill regulations for the infantry, which, on the 29th, were approved and adopted.

In the library of the War Department one of the few remaining copies of this book may be seen. It was the first important result of the inspectorship, and was of inestimable benefit to the Army. The scope of this sketch will not permit an analysis of these regulations, but it may be remarked that they partook of the Baron's very practical ideas in regard to the character of the instruction most needed to prepare the troops for the field. Many of the rules prescribed and the customs resulting from them are still observed in the Army; others might be revived with benefit to discipline.

[1] Journals of Congress.

The regulations having been formally approved, Washington, on April 12, May 4, 12, 22, and June 20, 1779, issued orders making the Inspector-General and his assistant responsible for their observance. The subinspectors, when their divisions were detached, were to perform the duties of Adjutant-General, and the new duties of the brigade majors, which were in effect the same as outlined in Steuben's plan, were defined. In reference to inspections the brigade majors received their instructions from the Inspector-General and from the subinspectors of the divisions to which they belonged. It was doubtless in pursuance of this idea of uniting the duties of Adjutant-General and Inspector-General that Congress, on June 22—

> *Resolved*, That the Adjutant-General, for the time being, be also Assistant Inspector-General.

The organization of the inspectorship being now complete, Washington, on July 1, issued an order prescribing a monthly inspection of the whole Army, and directing that at these inspections the inspectors be furnished, by all company commanders, with exact returns of the troops and of all Government property since last inspection, as well as of that on hand. These returns were consolidated into division returns, for the information of the division commanders. "With what strict scrutiny were the inspections made" relates William North:

> I have seen the Baron and his assistants seven long hours inspecting a brigade of three small regiments. Every man not present must be accounted for. If in camp, sick or well, they were produced or visited; every musket handled and searched, cartridge boxes opened, even the flints and cartridges counted; knapsacks unslung and every article of clothing spread on the soldier's blanket and tested by his little book, whether what he had received from the United States within the year was there, if not, to be accounted for. Hospitals, stores, laboratories, every place and every thing was open to inspection and inspected, and what officer's mind was at ease if losses or expenditures could not, on the day of searching, be fully and fairly accounted for? The inspections were every month, and wonderful was the effect, not only with regard to economy, but in creating a spirit of emulation between different corps. I have known the subalterns of a regiment to appropriate one of their two rations to the bettering the appearance of their men, but this was at a later period of the war, when supplies and payments were more ample and more regular.[1]

On January 12, 1780, Congress abolished the mustering department and transferred the duties to the Inspector-General's Department. The effect of this was to simplify and greatly improve the administration and efficiency of the Army. A division of duties so closely united as to be almost identical, among two sets of officers entirely separated by official lines and having a different responsibility resulted in much friction and confusion and added to the difficulties of command. That the change was in the interest of economy can not be doubted, and on May 7, Steuben submitted a plan which included the duties of both departments. After considering this plan, Washington, on July 14, addressed the following to the President of Congress:

> I inclose a plan which, in conjunction with the Inspector-General, I have framed for the consideration of Congress. It is indispensable the Department should be put in full activity without loss of time—the speedier the decision the better. A large additional allowance, at least nominally, for the inspectors is proposed, but it is a

---

[1] Kapp's Life of Steuben.

very imperfect compensation for the additional trouble, and unless some extra privileges and emoluments attend the office it will not be undertaken by officers of rank and ability.[1]

This plan, expressing the concurrent and deliberate views of Washington and Steuben, should be given in full, but it is so lengthy that only a synopsis is permissible.

It provided for an Inspector-General with the rank of major-general, to be taken from the line of major-generals, with 2 aids and 2 secretaries; an Assistant Inspector-General, to be adjutant-general of the main army; an inspector to each division, 1 to the corps of cavalry, 1 to the artillery, 1 to the independent corps, garrisons, and to the militia in service, to be taken, when practicable, from the line of colonels and lieutenant-colonels, and one to each brigade, with the rank of major. The drill regulations and those prescribing discipline, service of guards and detachments, camps and garrisons, to be framed and their execution superintended by the Inspector-General of the Army; the assistant inspector-general to act as Inspector-General during the absence of the latter, and to perform the duties of Adjutant-General; the inspectors and subinspectors to act as adjutants-general of the divisions and brigades, receiving their instructions in reference to inspection duty from the Inspector-General and assistant inspector-general; the troops to be reviewed and mustered by the Inspector-General and his assistants monthly, noting the number and condition of the men, their discipline and drill, the state of the arms, equipments, clothing, rations, etc., rejecting all unserviceable recruits, discharging or transferring to the invalid corps all men disabled in the service, and reporting all abuses, neglects, and deficiencies to the Commander in Chief, the commander of the organization, and to the board of war. The returns of men and material, as required in Washington's order of July 1, were continued, as were the other duties and responsibilities. The Inspector-General, in all that related to inspections, was subject only to Congress, the board of war, and the Commander in Chief; all other inspectors to the commanders with whom they served.

This plan having been discussed, Congress, on September 25, 1781, voted that—

> Whereas the institution of the department hath been found of great utility to the armies of these United States; and experience hath shown that it may be rendered still more useful by an extension of its powers and objects: Therefore,
>
> *Resolved*, That the former establishment by a resolution of February 18, 1779, and all subsequent resolutions relative thereto, be repealed, and the department hereafter have the following form, powers, and privileges.

Then follows the plan proposed by Washington and Steuben, with some changes, and Steuben was continued as Inspector-General, and authorized to appoint all officers necessary to its execution, they being first approved by the Commander in Chief.

Considering the short time the inspectorship had been established, the plan was as satisfactory as could be expected, but was a disappointment to the Baron. Nevertheless he continued actively at work and devised many remedies for the abuses which prevailed throughout the Army. That they were numerous, and that Washington believed in the efficacy of frequent inspections, his correspondence fully proves.

On the surrender of Cornwallis, Steuben recommended a reduction in the number of inspectors and proposed some other changes. Accordingly, on January 10, Congress authorized 1 Inspector-General, to be appointed from the general officers, with 1 secretary and 2 aids to be taken from the line; 1 field officer of the line to be inspector of each separate army, with $80 per month additional pay, and to be allowed to select a captain or subaltern to assist him in the duties of his office. with $10 per month additional pay. The inspectors in the execution of their offices were made subject only to the orders of Congress, the Secretary of War, the Commander in Chief, or commanding officer of a separate army. The authority and duties of the Inspector-General and his assistants continued unchanged.

---

[1] Original manuscript in the State Department.

With the capitulation of Cornwallis the operations of the main army may be said to have terminated. Attention was now concentrated on the Southern army, and every effort made to render it efficient, but with little success. The dishonesty and extortion which had characterized the methods of supplying the troops still continued, and finally engaged the attention of Congress, which, on May 7, 1782, provided for the appointment of inspectors of contracts and supplies for the two armies, who were to report any fraud, neglect of duty, or other misconduct by which the public property was wasted or expense unnecessarily incurred.

Under these resolutions Col. Ezekiel Cornell, of Rhode Island, was made inspector of contracts for the main army, and Col. Francis Mentges, of the Fifth Pennsylvania Regiment, the inspector of the Southern army. Both of these officers were acting as inspectors of the aforesaid armies, respectively.

The Peace of Paris was signed January 20, 1783, and a cessation of hostilities was proclaimed by Washington to take effect April 19.

On December 23, Washington resigned his commission in the Army and retired to private life. The same day he addressed a letter to Steuben, the last he ever wrote as Commander in Chief, in which he said:

> * * * I wish to make use of this last moment of my public life to signify in the strongest terms my entire approbation of your conduct, and to express my sense of the obligations the public is under to you for your faithful and meritorious services.

On December 30, 1782, Congress passed a resolution complimentary to Steuben, and on March 24, 1784, he sent in his resignation. In accepting it Congress passed a resolution of thanks "for his great zeal and abilities," and ordered "that a gold-hilted sword be presented to him as a mark of the high sense entertained for his character and services." Washington had previously written, in reply to the Baron's inquiry "whether or no he considered the department of the Inspector-General necessary to the Army, and whether it had been conducted according to his wishes," as follows:

> I give it as my clear opinion that it has been of the greatest importance for reasons too obvious to need enumeration, but more especially for having established one uniform system of maneuvers and regulations in an army composed of the troops of thirteen States (each having its local prejudices), and subject to constant deviations and interruptions from the frequent changes it has undergone. It is equally just to declare that the department under your auspices has been conducted with an intelligence, activity, and zeal not less beneficial to the public than honorary to yourself, and that I have abundant reasons to be satisfied with your abilities and attention to the duties of your office during the four years you have been in service.[1]

---

[1] Writings of Washington.

Steuben did not return to Europe, but made his home in Oneida County, N. Y., where he died of paralysis November 28, 1794, at the age of 65 years.

When the Army was disbanded it was divided into a Northern and Southern force. The main body of the Northern army was stationed along the Hudson River, from Newburg to West Point. On the 19th of March, 1784, Steuben appointed Maj. William North, his aid-de-camp, inspector of these troops, and the appointment was confirmed by Congress April 15, when he was made "inspector to the troops remaining in the service and pay of the United States," which consisted at the end of April of 433 infantry and 80 artillery. On the 2d of June Congress ordered all the troops in service to be mustered out, except 25 privates to guard the stores at Fort Pitt and 55 at West Point. Under this act General Knox was disbanded and the command of the "Army" devolved on Captain and Brevet Major Doughty, of the artillery.

From this date to July 31, 1787, the Army was increased and reduced several times; at the latter date it consisted of 1 regiment of infantry and 4 companies of artillery.

On June 25, 1788, it was resolved in Congress—

> That the office of inspector of troops in the service ot the United States immediately cease and be discontinued, and that the Secretary of War report what mode may be most eligible for having the troops inspected in the future.

In accordance with these instructions, he wrote, July 3, 1788, to the President of Congress as follows:

> Agreeably to the order of Congress of the 25th ultimo, I have the honor to report to your excellency that the recruits at present raising in Connecticut, New Jersey, and Pennsylvania will be mustered and inspected previously to their marching by Mr. Stagg, who is employed in this office and is adequate to the business.
>
> That I conceive the troops on the frontiers may be mustered and inspected by the majors on oath.

Mr. John Stagg was the chief clerk of the War Department and an ex-officer of the Continental Army. He was brigade major of Conway's brigade, and of course had performed the duties of inspector. Under these instructions the majors of the regiments acted as inspectors, but Messrs. Stagg and Francis Mentges were inspectors under the Secretary of War.

The War Department was established August 7, and on September 29 Congress enacted a law "to recognize and adapt to the Constitution of the United States the establishment of the troops raised under the resolves of the old Congress."

By the act of April 30, 1790, the infantry regiment had 3 battalions of 4 companies each; the artillery battalion, 4 companies—a total of 1,216 men. Section 4 authorized an inspector "to inspect said troops."

Owing to Indian hostilities a second regiment of infantry was added March 3, 1791, bringing the authorized aggregate strength of the Army to 2,232. On March 4 Arthur St. Clair, of Pennsylvania, was appointed major-general and replaced Harmar in command of the Northwest Territory. The inspector of this army was Mr. F. Mentges, already mentioned.

Owing to the failure of his expedition against the Indians St. Clair resigned March 5, 1792, and on the same day Congress added 3 more infantry regiments for a term not to exceed three years. One of these regiments was given the unique organization of 2 battalions of infantry and 1 squadron of 4 troops of light dragoons.

Provision was made for a general staff, in which there was an "adjutant to do also the duty of inspector and a brigade major to act as deputy." Col. Winthrop Sargent, of Massachusetts, acting assistant adjutant-general of St. Clair's army, was appointed adjutant and inspector, but declined, assigning as a reason that the office was not attended with sufficient rank.

General St. Clair was succeeded by General Wayne, and the Army was organized by Washington into a legion and 4 sublegions, making the aggregate strength of the whole 5,414.

The legionary staff included 1 adjutant and inspector and that of the sublegion 1 brigade major and inspector. As Colonel Sargent declined his appointment, General Wayne appointed Capt. Henry de Butts, of the Fourth Sublegion, acting adjutant and inspector March 17. He was relieved by Capt. Edward Butler, of the Fourth Sublegion, who acted until relieved, February 23, 1793, by Maj. Michael Rudolph, of the Light Dragoons, who was appointed Adjutant and Inspector of the Army. He resigned July 17, 1793, and was succeeded by Capt. Edward Butler, who held the position until May 13, and was followed by Maj. John Mills, Second Sublegion.

The act of March 3, 1795, provided for "an Adjutant-General to do also the duty of Inspector," and gave additional compensation to the brigade majors.

The act of May 30, 1796, provided for 1 inspector to do the duty of Adjutant-General and terminated the existence of the legion. On February 27 Maj. Thomas Cushing, First Infantry, was appointed Inspector of the Army and performed the duties of Adjutant-General.

The act of March 3, 1797, repealed the foregoing act and provided for 1 brigadier-general, to choose his brigade major from the captains of the line. As Major Cushing had not relinquished his rank in the line upon receiving the commission of inspector, he continued to perform the duties of his office by detail.

By the act of May 22, 1798, the brigadier-general was authorized to choose his brigade major and inspector from among any of the commissioned officers in the line of the Army.

About this time our difficulties with France assumed a threatening aspect, and Congress authorized a provisional army, the organization of which followed the principles observed toward the end of the Revolution. The troops formed brigades and divisions. The Adjutant-General was deputy to the Inspector-General. The duties performed by the inspectors were generally such as devolved on them during the Revolution and since. All inspectors were given additional pay.

On July 3 Washington was made Commander in Chief, and on the 18th Alexander Hamilton was appointed Inspector-General with the rank of major-general. In a letter addressed to the Secretary of War July 4 Washington gave his views at length respecting the importance of the general staff to the welfare of the Army.

Referring to the Inspector-General he wrote:

> If the Inspector-General is not an officer of great respectability of character, firm and strict in discharging the duties of the trust reposed in him, or if he be too pliant in his disposition, he will most assuredly be imposed upon and the efficient strength and condition of the Army will not be known to the Commander in Chief. Of course he may form his plans upon erroneous calculations and commit fatal mistakes.

Hamilton selected as his aids Capt. George Izard and Lieut. Ethan Allen Brown. Jacob Brown, who became a major-general in 1812 and Commander of the Army, was his military secretary.

A few days after receiving his commission, July 28, Hamilton entered upon his duties, which far exceeded in their variety and scope those of any other officer of the Army. Nothing escaped his attention. He was practically at the head of the War Department and chief of staff, both the Secretary of War and Washington placing unbounded confidence in his abilities, his patriotism, and integrity. The scope of this sketch will not allow a recital of the many important services rendered by Hamilton and his assistants. On February 4 he was invested with the command of all the troops along the Northern Lakes and in the Northwest Territory. Among the many objects which he had under consideration was the plan of a military academy, which had also been suggested by Steuben, and had repeatedly received the consideration of the Government, but without result.

He submitted his plan to Washington, who replied under date of December 12, 1779, commending the idea, but declining to make any observations on the details of the plan.

This, the last letter written by the "Father of his country" before his death, which followed two days later, suggests the reflection that the last letter written by him at the close of the Revolution and just before resigning his commission, was addressed to the Inspector-General of the Army, the Baron Steuben. Like Hamilton, Steuben had been appointed to his office at the request of Washington, and both shared in the fullest degree his confidence and affection.

As our difficulties with the French Republic now seemed in the way of adjustment, Congress, May 14, 1800, reduced the Army. On May 13 Hamilton had requested leave to resign his commission June 1, but this was not granted, as it was thought expedient that the larger bodies of troops at different stations should be mustered out by him in person. His resignation was finally accepted June 15. He, as well as Steuben, was elected president-general of the Society of the Cincinnati.

On the resignation of Hamilton, Major Cushing of the First Infantry, who had been Inspector and Adjutant-General before him, and who was a division inspector of the provisional army, once more resumed the office of Inspector of the Army. He continued to fill the office by detail until Congress reestablished it in 1802. The office of Adjutant-General having been discontinued and the reduction of the Army completed, the duties which had devolved on him were transferred to the Inspector, and the duties of inspection prescribed in orders from the Headquarters of the Army of August 19, 1800.

On November 30 the country was divided into twelve districts, to be commanded by regimental and battalion commanders. Musters and inspections were to be made monthly by the district commanders when the regular inspecting officers could not attend. The order is noteworthy in prescribing that "the muster and inspection of a garrison should not be made by any officer belonging to it."

On the resignation of Hamilton, Brig. Gen. James Wilkinson became the senior officer of the Army and so remained until March 27, 1812. Through all this period he had immediate command of the Army, the headquarters of which were at various points, depending on his movements. The Adjutant and Inspector of the Army accompanied him or not, as might be directed, and performed his duties generally under his orders, although sometimes employed by the Secretary of War.

The injustice of assigning to an officer detailed from the line, without extra compensation, the arduous duties of Adjutant and Inspector, induced Congress on March 16, 1802, to again establish that office by law, and Major Cushing was appointed to it March 26, and held the position to September 7, 1805. Meanwhile, April 1, 1802, he was promoted lieutenant-colonel of his regiment.

Under the act of April 12, 1808, the Army was increased to 9,921 aggregate, and two inspectors to be taken from the line were authorized. On April 2 Colonel Cushing was succeeded by Maj. Abimael Nicoll of the artillery.

From the close of the Revolution to the year 1808 the Army was subjected, as has been shown, to many changes. There were no printed regulations other than those prepared by Steuben. Efforts had been made by Hamilton, Pinckney, and others to revise the drill books and to compile regulations, but their work was not published. The systems which prevailed at the close of the Revolution continued, modified by such regulations and orders as circumstances suggested.

In February, 1810, Col. Alexander Smyth, of the regiment of riflemen, compiled a system of infantry exercises and maneuvers, chiefly from French sources, which he was directed to test with the troops in camp near Washington, "there being," so says the order, "no established system for the Army of the United States."

Owing to the difficulties growing out of the Napoleonic wars, the refusal of the British to evacuate the posts surrendered by the Treaty of Paris, and the depredations and insults of her cruisers, Congress on on December 24, 1811, increased the Army. The staff included one Inspector-General with rank of brigadier-general, with two assistants to be taken from the line of lieutenant-colonels.

On May 4, 1812, the following regulations defining the duties of the Inspector-General were issued by the Secretary of War:

> * * * It will be the duty of the Inspector-General to organize the Army; to superintend and enforce discipline; to visit and inspect camps, cantonments, quarters, prisons, places of arms, and hospitals; to make stated and unexpected inspections of troops, arms, equipments, clothing, ammunition, and horses; to make inspections, returns, and confidential reports relative to the state and discipline of the Army; to designate men and horses unfit for service or the fatigues of war, that the former may be discharged or sent to garrisons, and the latter sold; to examine the books of quartermasters, paymasters, and companies, and ascertain the balances; and to prescribe forms of returns exhibiting all the wants of the Army.

These regulations are a summary of the duties which since its establishment had gradually devolved upon the department.

On May 16 the President was authorized to appoint, from the captains and subalterns of the line, one subinspector to each brigade, with the additional monthly pay of $24.

On June 18 war was declared against Great Britain, and on the 26th the Army was given a more perfect organization, comprising a general staff, medical staff, ordnance department, quartermaster's department, corps of engineers, 4 regiments of artillery, 2 of dragoons, 1 of riflemen, and 25 of infantry, an aggregate of 35,752. The country was divided into nine military districts, each with a district staff, which included an inspector. General Dearborn was the senior officer and Commanding-General during the war.

By the act of July 6, 1812, the President was authorized to appoint to any army of the United States other than that in which the Inspector-

General was serving, one deputy inspector-general, to be taken from the line with increased pay, and such number of assistant deputies as the service might require.

On July 6 Colonel Smyth was appointed Inspector-General, and on July 14 the Secretary of War issued instructions merging temporarily the offices of Adjutant and Inspector-General with the Adjutant-General's Department, the duties of both to be performed under the direction of the Adjutant-General, to whom Major Nicoll was appointed assistant. Capt. William King of the Fifteenth Infantry was made assistant to the Inspector-General. In September General Smyth was given a brigade in the Army along the Niagara River, commanded by Major-General Van Rensselaer of the New York militia. On the resignation of that officer after the battle of Queenstown, the command passed to General Smyth.

The act of March 3, 1813, organizing the general staff, provided that the Adjutant-General's and Inspector-General's departments should consist of 1 Adjutant and Inspector General with the rank of brigadier-general; 8 adjutants-general and 8 inspectors-general with the brevet rank, pay, etc., of colonel; 16 assistant adjutants-general and 16 assistant inspectors-general with the brevet rank, pay, etc., of majors, to be taken from the line or not, as the President might deem expedient. The President was also empowered to assign 1 of the brigadier-generals to the principal Army to act as Adjutant and Inspector of such Army. As this act discontinued the offices of Adjutant-General and Inspector-General, it was held that General Smyth, having no commission in the line, was disbanded and no longer an officer of the Army. He sought relief from Congress, but was unsuccessful, and ceased to be an officer March 3, 1813. The most notable service rendered by him while Inspector-General was the preparation of regulations for the field service, maneuver, and conduct of infantry, a copy of which may be seen in the library of the War Department.

On March 12 Brig. Gen. Zebulon M. Pike was appointed Adjutant and Inspector to the Army commanded by General Dearborn, but was killed by the explosion of a mine in the attack on the British fortifications at York, Upper Canada, April 13.

From the death of General Pike to May 19, 1814, the office of Adjutant and Inspector General of the Army remained vacant, the affairs of the two branches being in charge of Colonel Nicoll, Inspector-General, and Maj. C. K. Gardner, assistant adjutant-general, respectively.

On May 19 Brig. Gen. W. H. Winder was appointed Adjutant and Inspector of the Army, and chief of staff to the Northern Army; on July 2 he was assigned to the command of the Tenth military district. On the reduction of the Army in June, 1815, he retired from service and resumed the practice of the law at his home in the city of Baltimore. He died May 24, 1824.

Meantime Col. A. Y. Nicoll, who had been in charge of the inspector's office in the War Department, resigned June 1, 1814, and was succeeded by Col. John R. Bell, Inspector-General, who was appointed major and assistant inspector-general July 29, 1813. On November 22, 1814, Mr. Daniel Parker, of Massachusetts, the chief clerk of the War Department, was appointed Adjutant and Inspector General of the Army.

On the reduction of the Army in 1815 the 8 inspectors-general and 16 assistant inspectors-general were discharged and 4 brigade inspectors, to be taken from the line of the Army, substituted. No provision was made for continuing the office of Adjutant and Inspector General of the Army, but under the discretion given the President he retained provisionally 1 adjutant and inspector general, and other staff officers. In March the ten military districts were replaced by nine military departments, forming a northern and a southern division, each division and department having an inspector, generally selected by its commander.

On December 27 the Secretary of War suggested to the Military Committee of the House the expediency of providing by law for the staff appointments provisionally retained by President Madison. This led to the act of April 24, 1816, organizing the general staff, which recognized and made permanent those officers, and provided for 1 Adjutant and Inspector General of the Army, 1 inspector-general of each division, and an assistant inspector-general to every brigade, to supersede the inspectors authorized by the act of March 3, 1815, and to be selected from the line of the Army or from civil life, with the rank, pay, and emoluments provided by the act of March 3, 1813. Colonels Hayne, of the dragoons, and Wool, of the infantry, were announced as inspectors-general, and Captains J. M. Davis, William McDonald, and G. H. Manigault, of the infantry; Francis S. Belton, formerly of the dragoons, but now in civil life, and John Biddle, of the artillery, as assistant inspectors-general.

By the act of April 14, 1818, the pay of division inspectors was made equal to the pay of division adjutants-general. The administration of inspectors continued unchanged until October, 1820, when, by orders, all assistant inspectors-general were placed under the division commanders acting through the division inspectors.

By the act of March 2, 1821, the Army was reduced and reorganized. The office of Adjutant and Inspector General was abolished, and but two inspectors-general, with the rank, pay, and emoluments of colonels of cavalry, authorized. Colonels Wool and Gadsden (the latter appointed October 1, 1820, but not confirmed) were continued as inspectors. It was their duty to make a complete annual inspection of the Army under the orders of the General Commanding, the troops, posts, and other establishments being equitably divided between them.

On May 17, 1821, an order was issued by the President substituting an eastern and western department for the two divisions into which the country was divided in 1815. In August Colonel Gadsden was appointed Adjutant-General, and in November Maj. S. B. Archer, of the artillery, was appointed to succeed him.

In December the inspections were specialized, the infantry being assigned to Colonel Wool, and the artillery, arsenals, foundries, and manufactories of arms to Colonel Archer. This was a departure from the practice previously observed, under which there was no division of inspections according to the previous service of inspectors.

During the years 1823 and 1824 additional duties were imposed on inspectors in reference to returns, reports, accounts, statements, and inventories of public property, and they were held responsible for all estimates for supplies, which were to be made on consultation with post commander. When not engaged inspecting, they were required to take station at Army Headquarters.

On March 2 the order specializing the inspections was revoked, and the two inspectors were directed to alternate in the annual inspections which were to be made under the orders of the Commanding General. No reasons for this change are given in the order, which was doubtless issued to more perfectly equalize the duties. The commandant of engineers was made inspector of the Military Academy.

By the act of March 3, 1825, authorizing the sale of unserviceable ordnance, arms, and military supplies, Congress designated inspectors-general as primarily the proper officers to inspect public property with a view to its elimination from service. By paragraph 4 of General Orders, 58, series of 1825, such inspections were to be "made by an inspector-general when practicable."

On December 11, 1825, Colonel Archer died, and was succeeded, December 31, by George Croghan, of Kentucky, formerly lieutenant-colonel of the Fifteenth Infantry, and renowned for the defense of Fort Sandusky, Ohio, in 1813, against the British and Indians.

In April, 1829, inspectors-general were authorized to discharge soldiers on certificate of disability, a power previously exercised by them.

On May 19, 1837, the two great departments were changed into divisions, with different limits, and divided into seven geographical departments. To each division one of the inspectors-general was assigned as chief of staff and to perform the duties of adjutant and inspector-general. The act of July 5, 1838, having added 2 assistant adjutants-general with brevet rank of major and 4 with rank of captain, and required them to perform the duties of assistant inspectors, the 2 inspectors-general were returned to the Headquarters of the Army December 13.

On June 25 Brevet Brigadier-General Wool was appointed full brigadier, and in December, 1839, was succeeded by Major Churchill, of the artillery.

In May, 1842, the following important addition to the duties of inspectors was made by the Secretary of War, Mr. John C. Spencer:

> * * * II. It is made the duty of the inspectors-general, or officers acting as inspectors, carefully to examine and inspect all supplies and materials procured for the construction of forts, or for harbor and river improvements, and all the means applicable thereto, and the number and description of vessels, boats, machinery, and instruments, etc., and they will inquire into all contracts for supplies and materials of all kinds in the different departments, and whether the articles furnished conform to such contracts, and also into contracts made by the Quartermaster's Department for the transportation of troops and stores. The results of these inspections will be forthwith reported, as provided in paragraph 835.

On August 23, 1842, an act of Congress abolished one of the inspectors-general, but on January 12, 1846, this act was repealed. During this period both inspectors continued in office, and were for a time on duty with the Army in Mexico.

In August, 1848, General Orders, 49, divided the country into two military divisions, the Eastern consisting of four departments and the Western of five departments. There were, in addition, two separate departments, Nos. 10 and 11, from which, in October, was formed the third or Pacific Division. This arrangement of the country continued until October 31, 1853, when seven military departments were substituted for it.

Colonel Croghan died January 8, 1849, and was succeeded January 26 by Capt. James Duncan, Second Artillery, who died July 3, and was followed June 10, 1850, by Maj. George A. McCall, Third Infantry.

In May, on the accession of General Scott to the command of the Army, the inspectors-general were ordered to report to him by letter.

On October 16 General Churchill was assigned as inspector of the Eastern Division, Colonel McCall of the Pacific Division, and Bvt. Col. Samuel S. Cooper, assistant inspector-general to the Western Division. On December 17 the order was revoked, and the inspectors were again attached to Army Headquarters, but ordered to inspect the three divisions in regular rotation, after which they were to report in person to the Commanding General. Colonel McCall resigned April 29, 1853, and was succeeded by Capt. J. K. Mansfield, of the engineers, May 28.

No change in the number of inspectors took place between 1842 and 1861, but on March 6, 1860, Bvt. Col. Joseph E. Johnston, of the First Cavalry, was assigned to duty as Acting Inspector-General of the Army, according to his brevet rank. On May 14, 1861, Colonel Mansfield was appointed brigadier-general, and was succeeded on the same date by Capt. and Bvt. Lieut. Col. Henry L. Scott, of the Fourth Infantry.

On August 3, 1861, five assistant inspectors-general with rank of major and on August 6 two inspectors-general with the rank of colonel were added by Congress.

No change in the number of regular inspectors occurred until 1864; but by the act of July 17, 1862, an inspector-general with the provisional rank and pay of lieutenant-colonel was provided for each army corps. The names of those appointed under the act will be found in General Orders, 181, of 1862.

No change in the organization of the department occurred during the war. In 1861 Colonel Marcy was appointed brigadier-general and chief of staff to the Army of the Potomac, and so served to November, 1862. Colonel Sacket was inspector-general of that army to 1863, when he was succeeded by Colonel Schriver. Baird, Buford, and Totten were general officers commanding troops, while Hardie, Davis, Jones, and Van Rensselaer were on duty as inspectors. When not assigned to one of the armies in the field they were under the orders of the Secretary of War. Armies, army corps, divisions, brigades, geographical divisions, and departments had inspectors-general, assistant or acting assistant inspectors-general, usually selected by the several commanders, and all parts of the Army were subject to frequent inspections. The number of geographical departments increased until in 1865 there were 29 departments, forming 5 divisions, and also a number of districts, nearly all of which had inspectors.

On January 22, 1866, the War Department published in General Orders, No. 5 regulations relating to the inspection service, which prescribed the ordinary subjects of inspection and the general principles to be observed. This order, based on the wide experience of the Department up to date, defined the "ordinary duties of inspection" to be—

> the condition as to efficiency, discipline, supplies, etc., of bodies of troops, and the resources, geographical features, lines of communication and supply, the military wants, etc., of any section of the country; the military status in any field of operations; the condition and supply of military materials of various classes; the condition of the administrative or disbursing departments of the service; the efficiency and conduct of military commanders and agents; the cause of failure or delay in movements or operations, of losses by accidents, disasters, etc., and, in general, all matters pertaining to the military art or having interest in a military point of view.

In the ordinary discharge of the duties, the sphere of inquiry was thus made to include every branch of military affairs, being defined and limited only in specific cases by the orders issued. This order and the circular of November 2, 1868, are fundamental, and have been the basis of all subsequent regulations and orders affecting the department.

The act of July 28, 1866, fixed the number of inspectors-general with rank of colonel at four; assistant inspectors-general with rank of lieutenant-colonel at three, and the number with rank of major at two.

In October, 1868, all the inspectors and assistant inspectors-general were assigned to divisions and departments except Colonel Schriver, who was placed in charge of the bureau and made inspector of the Military Academy. Selections for acting inspectors were to be made from the grades of field officers who had served not less than ten years. The inspectors of departments were made subordinate to division inspectors, from whom they were to receive instructions relative to the manner of performing their duties.

The act approved March 3, 1869, prohibited any new appointments or promotions in the department. In April the stations of inspectors were changed, and Colonel Marcy was assigned as Inspector-General at Army Headquarters and Colonel Schriver with the Secretary of War. At the same time department commanders were ordered to make inspections of the troops and posts in person when practicable.

By an act approved June 8, 1872, the President was authorized to appoint Lieutenant-Colonel Davis to the rank and place he would have had if promoted at the time of Colonel Hardie's appointment. This act increased the number of colonels to 5, but provided that there should be no promotion to that grade until the number of colonels was reduced to 4.

In October, 1872, the 5 inspectors-general were assigned to stations, but performed their duties under the orders of the Secretary of War and General of the Army; the 3 assistant inspectors-general went to the headquarters of the three divisions. Field officers of the line were detailed as department inspectors.

In January, 1873, orders were issued excepting from inspection by department or division inspectors all engineer establishments, officers, or agents. The act of March 3, 1873, established the military prison, and required one of the inspectors-general to visit and inspect it at least once in three months.

In April, 1874, the act providing for the inspection of disbursements was passed. It embodied a principle, previously recognized by Congress, "that officers detailed for this duty should not be in any way connected with the department or corps making the disbursement." This act was at first construed to require monthly inspections, and imposed most arduous duties on all inspectors, who were made responsible for any defalcation or misapplication of the public money or property which "an active vigilance on their part might have detected." It is difficult to imagine a more unjust requirement than this, or one more clearly unintended by the law, which was not designed to prevent frauds or to punish criminals, but to determine the necessity, propriety, and economy of disbursements, and whether officers complied with the law in keeping their accounts and making their deposits. In June, 1874, inspections of disbursements were ordered to be made bimonthly.

By the act of June 23, 1874, reorganizing the staff of the Army, the Inspector-General's Department was to consist of 1 colonel, 2 lieutenant-colonels, and 2 majors, and not to exceed 4 line officers to act as inspectors-general; and no more appointments were to be made until the number of inspectors-general was reduced to 5, but no officer then in service was to be reduced in rank or mustered out. This law settled in the affirmative the question as to whether the inspectors-general constituted a department, about which there had been some variance of opinion.

In April, 1876, the Secretary of War directed the Inspector-General to report to the General of the Army, and to be under him in all matters relating to military control and discipline. In May a reassignment of the inspectors was made, by which two were ordered to Army Headquarters and the others to the three divisions. Reports of the inspection of troops and military posts were to be forwarded through regular channels to the Inspector-General's Office, and inspectors were ordered to note on such reports the remedies applied, and all superior commanders to indorse on them their action, "for the information of the General of the Army." In July the inspections of disbursements were ordered to be made quarterly, and the annual inspection of national cemeteries required by law was assigned to this department, but in 1879 it was dispensed with unless specially ordered.

Congress having declared by the act of June 16, 1874, that the inspectors-general constituted a department, and the disproportion between the rank of the senior Inspector-General, or head of the department, and that of the other chiefs of bureau having been pointed out, the act of December 12, 1878, conferred on the senior Inspector-General the rank of brigadier-general, and fixed the number of colonels at 3, lieutenant-colonels 2, and majors 1.

In August, 1879, it was ordered by the Secretary of War that every post, station, and command of the Army should thereafter be inspected at least once each year by division and department inspectors under the direction of their respective commanders, and that in addition, post, station, and other permanent commanders should make similar inspections, annually, between September 1 and 5, and forward the reports to the Inspector-General's Office. This order published a blank form of report, which all officers making inspections were required to use.

Between May, 1878, and September, 1879, post schools and post cemeteries were made special subjects of inspection, and inspectors were required to have destroyed in their presence all unserviceable articles having no money value at the place where inspected.

By the act of March 3, 1883, it was made the duty of the Inspector-General of the Army to inspect the Soldier's Home in person once each year.

By the act of February 5, 1885, the department was given its present organization.

March 8, 1885, General Sacket died and was succeeded on the 11th by Col. N. H. Davis, who retired September 23, and was followed by Col. A. Baird.

In August inspections of disbursements were ordered to be made once every four months; in March, 1886, amendments of the regulations were made prescribing the manner of such inspections, and in June the inspection of the military departments of colleges was assigned.

The Hospital Corps having been organized by the act of March 1, 1887, orders were issued in August establishing the rules and regulations affecting it, and inspectors-general were required to examine into the efficiency of its members and of the company litter bearers.

On August 20, 1888, General Baird was retired, and was succeeded by Col. Roger Jones the same date. General Jones died January 26, 1889, and was succeeded by Col. J. C. Breckinridge January 30, 1889.

In January, 1889, the inspection of the supply division of the War Department, and in November the annual inspection of the militia were assigned to the department.

Between 1889 and 1894 many other important orders, regulations, and decisions have been issued affecting the duties of the department, which culminated in the amendment of paragraph 955, Army Regulations, by General Orders, No. 38, of 1890, which was the same in spirit as General Orders, No. 84, of 1879, and General Orders, No. 17, of 1882, under which the entire military establishment was to be inspected annually, the public works under engineer officers alone excepted. They, however, were now included, and remained on the list of inspections to July 5, when, by General Orders, No. 45, of 1892, they were again excepted.

By General Orders, No. 23, the Bureau of Information was established, and shortly after the inspection of the militia passed under the supervision of the Adjutant-General.

The last important duty assigned the department is the annual inspection of the National Homes for Disabled Volunteer Soldiers, prescribed by the act of August 18, 1894.

# REPORT OF THE JUDGE-ADVOCATE-GENERAL.

# REPORT

OF THE

# JUDGE-ADVOCATE-GENERAL, U. S. A.

---

WAR DEPARTMENT,
JUDGE-ADVOCATE-GENERAL'S OFFICE,
*Washington, D. C., September 25, 1900.*

Hon. ELIHU ROOT,
*Secretary of War.*

SIR: I have the honor to submit the annual report of the Judge-Advocate-General's Department for the year ending June 30, 1900.

| | |
|---|---|
| Commissioned officers tried by general court-martial: | |
| Regulars: (convicted 7; acquitted 2; sentence or acquittal disapproved 2) | 11 |
| Volunteers: (convicted 19; acquitted 3; sentence or acquittal disapproved 2) | 24 |
| Cadets tried by general court-martial (convicted) | 4 |
| Enlisted men tried by general court-martial: | |
| Regulars (convicted 4984; acquitted 376; sentence or acquittal disapproved 64) | 5424 |
| Volunteers (convicted 1036; acquitted 123; sentence or acquittal disapproved 35) | 1194 |
| Civilians tried by general court-martial: | |
| Those serving with the Army in the field (convicted 13; acquitted 2) | 15 |
| Discharged men held as general prisoners (convicted 4) | 4 |
| Tried under Forty-fifth and Forty-sixth Articles of War | 4 |
| Total trials by general court-martial | 6680 |

The following table shows, approximately, the number of convictions in the Regular Army of different offences by general courts-martial during the year ending June 30, 1900:

| | |
|---|---|
| Seventeenth Article of War: | |
| Losing arms | 11 |
| Losing accoutrements | 30 |
| Losing clothing | 19 |
| Losing Government property | 1 |
| Selling arms | 2 |
| Selling accoutrements | 3 |
| Selling clothing | 58 |
| Spoiling horse, arms, accoutrements, etc | 2 |
| Twentieth Article of War: | |
| Disrespect to commanding officer | 72 |
| Twenty-first Article of War: | |
| Assaulting superior officer | 6 |
| Disobeying superior officer | 330 |
| Disrespectful or threatening language to superior officer | 6 |
| Twenty-second Article of War: | |
| Inciting mutiny | 2 |
| Joining in mutiny | 2 |

| | |
|---|---|
| Twenty-fourth Article of War: | |
| Disobeying a commissioned officer quelling a fray | 7 |
| Disobeying noncommissioned officer quelling a fray | 2 |
| Disobeying noncommissioned officer when ordered into arrest | 1 |
| Drawing weapon upon noncommissioned officer quelling a fray | 3 |
| Resisting commissioned officer quelling a fray | 1 |
| Resisting noncommissioned officer quelling a fray | 4 |
| Thirty-first Article of War: | |
| Lying out of camp or quarters | 6 |
| Thirty-second Article of War: | |
| Absence without leave | 911 |
| Thirty-third Article of War: | |
| Failure to attend drill, roll call, etc | 495 |
| Leaving ranks without permission | 1 |
| Thirty-fourth Article of War: | |
| Found one mile from camp without leave | 2 |
| Thirty-fifth Article of War: | |
| Failing to retire to quarters | 4 |
| Thirty-eighth Article of War: | |
| Drunkenness on duty | 676 |
| Thirty-ninth Article of War: | |
| Quitting post | 106 |
| Sleeping on post | 296 |
| Fortieth Article of War: | |
| Quitting company | 1 |
| Quitting guard | 179 |
| Forty-second Article of War: | |
| Abandoning outpost | 2 |
| Cowardice | 10 |
| Deserting in face of enemy | 1 |
| Misbehavior before the enemy | 7 |
| Quitting post to plunder and pillage | 1 |
| Forty-seventh Article of War: | |
| Desertion | 444 |
| Fiftieth Article of War: | |
| Enlisting without a discharge | 1 |
| Fifty-fifth Article of War: | |
| Disorderly in quarters | 1 |
| Fifty-sixth Article of War: | |
| Robbery of person bringing provisions | 1 |
| Fifty-eighth Article of War: | |
| Aiding and abetting robbery | 2 |
| Assault and robbery | 1 |
| Assault with intent to kill | 8 |
| Assault and battery with intent to commit rape | 2 |
| Assisting in hiding stolen goods | 1 |
| Burglary | 5 |
| Larceny | 63 |
| Manslaughter | 3 |
| Murder | 5 |
| Rape | 3 |
| Robbery | 37 |
| Sixtieth Article of War: | |
| Embezzlement | 2 |
| Larceny | 41 |
| Selling Government property | 19 |
| Wrongful disposition of property | 1 |
| Sixty-first Article of War: | |
| Conduct unbecoming an officer and a gentleman | 5 |
| Sixty-second Article of War: | |
| Absence without leave, not chargeable under the thirty-second article of War | 86 |
| Abusing noncommissioned officer | 5 |
| Abuse of authority | 3 |
| Abusing public animal | 12 |
| Aiding and abetting desertion | 1 |
| Aiding and abetting larceny | 11 |

Sixty-second Article of War—Continued.

| | |
|---|---|
| Aiding and abetting robbery | 3 |
| Aiding prisoner to escape | 11 |
| Allowing prisoner to escape | 30 |
| Allowing himself to be captured and held a prisoner by insurgents | 3 |
| Alteration of instrument | 2 |
| Assault | 118 |
| Assault and battery | 61 |
| Assault upon noncommissioned officer | 32 |
| Assault upon noncommissioned officer in performance of duty | 56 |
| Assault upon sentry | 9 |
| Assault with dangerous or deadly weapon | 27 |
| Assault with intent to do bodily harm | 22 |
| Assault with intent to kill | 20 |
| Assault with intent to rape | 5 |
| Attempt at burglary | 2 |
| Attempt to commit sodomy | 4 |
| Attempt to defraud a private party | 6 |
| Attempt to defraud the Government | 3 |
| Attempt to destroy private property | 2 |
| Attempt to escape from guardhouse or confinement | 18 |
| Attempt to leave post without permission | 6 |
| Begging | 3 |
| Breach of arrest | 221 |
| Breach of parole | 6 |
| Breach of trust | 8 |
| Breaking open locker | 3 |
| Bribery | 12 |
| Burglary | 5 |
| Careless handling of loaded firearms | 10 |
| Carrying concealed weapons | 8 |
| Committing a nuisance | 36 |
| Conduct causing arrest by civil authorities | 2 |
| Conspiracy | 8 |
| Contempt of court | 1 |
| Creating an alarm in camp | 10 |
| Creating a disturbance | 56 |
| Creating disturbance in guardhouse | 4 |
| Defrauding private parties | 7 |
| Destroying private property | 14 |
| Destroying public property | 7 |
| Discharging firearms without cause | 9 |
| Disobedience of standing orders or regulations | 121 |
| Disobeying commissioned officer | 126 |
| Disobeying noncommissioned officer | 469 |
| Disobeying sentinel | 37 |
| Disorderly conduct | 69 |
| Disposing of clothing | 22 |
| Disrespect to noncommissioned officer | 111 |
| Disrespect to sentinel | 14 |
| Disrespect to superior officer | 60 |
| Drunk and disorderly | 418 |
| Drunkenness | 314 |
| Drunkenness, etc., causing arrest by civil authorities | 9 |
| Drunkenness, incapacitating for duty | 35 |
| Drunk on duty | 44 |
| Embezzlement | 14 |
| Escaping from guard or sentinel | 11 |
| Escaping from guardhouse | 6 |
| Evasion of duty | 4 |
| Failure to pay debts | 11 |
| Failure to send correspondence through official channels | 4 |
| Furnishing liquor to prisoners | 2 |
| False accusation | 4 |
| False statement or report | 114 |
| False swearing | 5 |
| Fighting | 10 |

Sixty-second Article of War—Continued.

| | |
|---|---|
| Firing firearms, endangering life | 1 |
| Firing on civilians without cause | 1 |
| Forcing entrance into private dwelling | 17 |
| Forgery | 15 |
| Fraud | 11 |
| Fraudulent enlistment | 137 |
| Gambling | 3 |
| Harrassing, annoying and looting natives and citizens | 19 |
| Having possession of intoxicating liquor | 6 |
| Impersonating an officer, sentinel or patrol | 10 |
| Indecent exposure of person | 5 |
| Insubordinate conduct toward commissioned officer | 47 |
| Insubordinate conduct toward noncommissioned officer | 71 |
| Interfering with noncommissioned officer in discharge of his duty | 7 |
| Introducing liquor into camp, quarters, etc | 37 |
| Larceny | 259 |
| Leaving post | 18 |
| Leaving post and abandoning rifle | 4 |
| Making indecent proposals | 19 |
| Manslaughter | 2 |
| Malingering | 14 |
| Misuse of hospital supplies | 5 |
| Mutinous conduct | 26 |
| Neglect of duty | 154 |
| Obtaining money or property under false pretences | 6 |
| Out of quarters after taps | 9 |
| Perjury | 5 |
| Permitting prisoner to obtain intoxicating liquor | 21 |
| Receiving and disposing of stolen property | 6 |
| Refusing to march | 1 |
| Refusing to perform duty | 2 |
| Removing cartridge belt without authority | 2 |
| Resisting arrest | 111 |
| Resisting arrest by civil authority | 6 |
| Resisting being disarmed | 3 |
| Resisting noncommissioned officer | 6 |
| Resisting sentinel | 7 |
| Robbery | 9 |
| Selling, losing or wasting Government property | 23 |
| Sitting down on post | 5 |
| Sleeping while on duty | 15 |
| Striking civilian | 1 |
| Striking noncommissioned officer | 32 |
| Striking sentinel | 2 |
| Threatening noncommissioned officer | 87 |
| Threatening sentinel | 6 |
| Threatening soldier | 35 |
| Threatening superior officer | 12 |
| Unauthorized carrying of arms | 17 |
| Using insubordinate language | 5 |
| Using insulting and abusive language | 43 |
| Using profane and indecent language | 83 |
| Using threatening and abusive language | 92 |
| Uttering forged paper | 3 |
| Disorder, etc., charged as "conduct to the prejudice of good order and military discipline" (not included under previous heads) | 231 |

The following table shows, approximately, the number of convictions in the Volunteer Army of different offences by general courts-martial for the year ending June 30, 1900:

Seventeenth Article of War:

| | |
|---|---|
| Losing accoutrements | 4 |
| Losing arms | 3 |
| Losing clothing | 2 |
| Selling clothing | 12 |

| | |
|---|---|
| Twentieth Article of War: | |
| Disrespect to Commanding Officer | 43 |
| Twenty-first Article of War: | |
| Assaulting superior officer | 9 |
| Disobeying superior officer | 117 |
| Threatening language to superior officer | 2 |
| Twenty-fourth Article of War: | |
| Disobeying commissioned officer quelling a fray | 2 |
| Disobeying noncommissioned officer quelling a fray | 2 |
| Resisting noncommissioned officer quelling a fray | 3 |
| Thirty-second Article of War: | |
| Absence without leave | 111 |
| Thirty-third Article of War: | |
| Failure to attend drill, roll call, etc | 41 |
| Thirty-eighth Article of War: | |
| Drunkenness on duty | 149 |
| Thirty-ninth Article of War: | |
| Quitting post | 20 |
| Sleeping on post | 106 |
| Fortieth Article of War: | |
| Quitting company | 9 |
| Quitting guard | 32 |
| Forty-second Article of War: | |
| Cowardice | 2 |
| Throwing away ammunition in face of enemy | 1 |
| Forty-seventh Article of War: | |
| Desertion | 20 |
| Fifty-first Article of War: | |
| Advising another soldier to desert | 1 |
| Fifty-fifth Article of War: | |
| Committing spoil | 1 |
| Fifty-eighth Article of War: | |
| Assault with intent to kill | 5 |
| Assault with intent to commit rape | 1 |
| Burglary | 1 |

| Sixty-second Article of War—Continued. | |
| Threatening superior officer | 15 |
| Using profane and indecent language | 29 |
| Using threatening and abusive language | 32 |
| Disorder, etc., charged as "conduct to the prejudice of good order and military discipline" (not included under previous heads) | 47 |
| Sixty-fifth Article of War: | |
| Breach of arrest by officer | 1 |

The number of men sentenced to dishonorable discharge in the Regular Army was 2,270 and in the Volunteer Army 315. Total 2,585.

Death sentences were imposed by sentence of court-martial in six cases of enlisted men—one of these cases being murder; one, rape; three, rape and other offences; and one striking superior officer. The death sentences were commuted by the President to dishonorable discharge, forfeiture of all pay and allowances, and imprisonment at hard labor for twenty years in five cases, and for three years in one case (striking superior officer.) The death sentence was also imposed by sentence of a court-martial in one case of a civilian employee, for rape and other offences. This sentence was commuted to confinement at hard labor in a penitentiary for twenty years.

The records of military commissions received at this office during the year covered by this report show that 58 persons were tried, of which number 42 were convicted, 15 were acquitted, and the sentence in one case was disapproved. The convictions were of the following offences:

| | |
|---|---|
| Abduction | 1 |
| Assault and battery | 4 |
| Assault and battery and robbery | 2 |
| Assault with intent to kill | 5 |
| Assault with a deadly weapon | 2 |
| Assault with intent to do bodily harm | 1 |
| Burglary | 1 |
| Conspiring and combining with guerillas | 1 |
| Cruelty to prisoners | 1 |
| Highway robbery | 2 |
| Highway robbery and guerilla warfare | 3 |
| Illegal warfare | 1 |
| Kidnapping and maltreating a fellow prisoner | 2 |
| Manslaughter | 1 |
| Misconduct in office as President of a pueblo | 1 |
| Murder | 22 |
| Persuading and advising enlisted men in U. S. Army to desert | 6 |
| Recruiting for insurgent forces | 1 |
| Robbery | 6 |
| Spy | 1 |
| Violating parole | 3 |

Death sentences were imposed by sentence of military commissions in thirteen cases of natives of the Philippine Islands—eight of these cases being for murder and robbery, four for murder, and one for being a spy. The death sentence was disapproved in one case, executed in five cases, and commuted to confinement at hard labor for twenty years in five cases, for fifteen years in one case, and for ten years in one case.

During the last session of Congress I submitted the draft of a bill "To prevent the failure of military justice," which was approved by the Secretary of War and referred to Congress. Towards the end of the session a bill, embodying certain amendments made in committee, was reported to the House of Representatives (H. R. 7571, Fifty-sixth Congress, first session, reported with amendments May 30, 1900), but it was too late for it to receive consideration. The legislation asked for is of importance, and I therefore invite attention to the subject again. As reported to the house, the bill is as follows:

A BILL To prevent the failure of military justice, and for other purposes.

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled*, That every person not belonging to the Army of the United States who, being duly subpœnaed to appear as a witness before a general court-martial of the Army, willfully neglects or refuses to appear, or refuses to qualify as a witness or to testify or produce documentary evidence which such person may have been legally subpœnaed to produce, shall be deemed guilty of a misdemeanor, for which such person shall be punished on information in the district court of the United States; and it shall be the duty of the United States district attorney, on the certification of the facts to him by the general court-martial, to file an information against and prosecute the person so offending, and the punishment of such person, on conviction, shall be a fine of not more than five hundred dollars or imprisonment not to exceed six months, or both, at the discretion of the court: *Provided*, That this shall not apply to persons residing beyond the State, Territory, or District in which such general court-martial is held, and that the fees of such witness, at the rate of five cents a mile from his place of residence to the place of trial and one dollar and fifty cents for each day required for such travel, shall be tendered him, and that after testifying he shall be paid at the same rate for returning and one dollar and fifty cents per day while in attendance on the court-martial, such amounts to be paid by the Pay Department of the Army out of the appropriation for compensation of witnesses: *Provided*, That no witness shall be compelled to incriminate himself or to answer any questions which may tend to incriminate or degrade him.

SEC. 2. That article ninety-four, section thirteen hundred and forty-two, of the Revised Statutes of the United States be, and the same is hereby, repealed.

SEC. 3. That section one hundred and eighty-three of the Revised Statutes of the United States be, and the same is hereby, amended so as to read as follows:

"SEC. 183. Any officer or clerk of any of the departments lawfully detailed to investigate frauds on, or attempts to defraud, the Government, or any irregularity or misconduct of any officer or agent of the United States, and any officer of the Army detailed to conduct an investigation, and the recorder, and, if there be none, the presiding officer of any military board appointed for such purpose, shall have authority to administer an oath to any witness attending to testify or depose in the course of such investigation."

SEC. 4. That article eighty-three, section thirteen hundred and forty-two, of the Revised Statutes of the United States be, and the same is hereby, amended to read as follows:

"ARTICLE 83. Regimental and garrison courts-martial and summary courts detailed under existing laws to try enlisted men shall not have power to try capital cases or commissioned officers, but shall have power to award punishment not to exceed confinement at hard labor for three months or forfeiture of three months' pay, or both, and in addition thereto, in the case of noncommissioned officers reduction to the ranks and in the case of first-class privates reduction to second-class privates: *Provided*, That a summary court shall not adjudge confinement and forfeiture in excess of a period of one month, unless the accused shall before trial consent in writing to trial by said court, but in any case of refusal to so consent, the trial may be had either by general, regimental, or garrison court-martial, or by said summary court, but in case of trial by said summary court without consent as aforesaid, the court shall not adjudge confinement or forfeiture of pay for more than one month."

SEC. 5. That article sixty, section thirteen hundred and forty-two, of the Revised Statutes of the United States be, and the same is hereby, amended by inserting after the words "shall, on conviction thereof, be punished by fine or imprisonment, or by such other punishment as a court-martial may adjudge," the words "or by any or all of said penalties."

The Judge-Advocate General's Department is now composed of eight officers only, a force entirely insufficient to meet present requirements. Under the law (Act of July 5, 1884) reorganizing the department, the Secretary of War is authorized to supplement this regular force with acting judge-advocates of departments, detailed from officers of the line. This arrangement has proved to be a very good one, and the officers so detailed have done their work well, but I am decidedly of opinion that a larger proportion of officers employed on this work should belong to the regular Judge-Advocate-General's Department. If the present corps were doubled, it would still be necessary to resort to the detail of line officers. This practice should by no means be abandoned, but I think that the number of the detailed officers should not so greatly exceed the number of officers of the department as the demands of the service now render necessary.

Very respectfully,
G. N. LIEBER,
*Judge-Advocate General.*

## EXTRACT FROM THE REPORT OF MAJOR EDGAR S. DUDLEY, JUDGE-ADVOCATE, UNITED STATES VOLUNTEERS, JUDGE-ADVOCATE DIVISION OF CUBA, HAVANA, CUBA, DATED JULY 7, 1900.

### JURISDICTION OF GENERAL COURTS IN CAPITAL CASES.

[Fifty-eighth Article of War.]

The provisions of the Fifty-eighth Article of War, that in time of war, insurrection or rebellion (thereby excluding such trial in time of peace), larceny, robbery, manslaughter, murder, and the other crimes specified in said Article, may be tried by General Courts-Martial, and the punishment on conviction thereof shall not be less than that provided by the laws of the State, Territory or District in which such offence may have been committed, whilst applicable to ordinary conditions and to troops serving in the United States, does not work well in those countries which we are occupying whose laws and penalties are different from our own. These provisions of law when made were undoubtedly intended to refer to the United States or to places where its system of laws extend, and the statutes and laws referred to in this, and in the Ninety-seventh Article of War, were those of the United States, or of a State, Territory or District of the United States—and not those of foreign countries. The jurisdiction of General Courts-Martial should be made to extend over all these crimes at all times and at all places, when committed by persons in the Military service of the United States, or by those attached to or connected with it in time of war, or in countries or territory outside of the United States. This is particularly necessary whenever any of its military forces are serving beyond the limits of the United States, either in territories whose existing laws differ from the American system, or in a foreign country held under military occupation (to that part of the army occupying it) notwithstanding the laws of the country may be in force by order of the military commander.

As the construction of this Article now stands a soldier accused of murder here in Cuba cannot be tried by a General Court-Martial nor a Military Commission. Provisional Courts are only to be established when the ordinary courts fail; he must, therefore, be tried by the civil courts or go free of trial for that crime; but the courts of Cuba, for example, and the punishments for crimes, are not those of the United States.

The question of jurisdiction of a General Court-Martial in the case of a soldier accused of murder having arisen it was decided that such court did not have jurisdiction in the condition of peace existing here and the Military Governor directed his trial by the Civil Courts. The Commanding Officer of the soldier protested against this on the ground, "That he is a citizen as well as a soldier and is within the protection of the guaranties of the Constitution of the United States," and especially of the Fifth and Sixth Amendments. "That this soldier did not place himself beyond the Districts and States named in the Sixth Amendment voluntarily, but in obedience to the order of the Executive Department of the United States, and was at the date of the events to which the accusation relates, and is at the present time, a resident of Cuba only in his character of a soldier and obeying such orders. That as a part of the Army of Occupation he is in person surrounded by the atmosphere of the Constitution and entitled to trial as therein guaranteed. That in fact the Army partakes of the character of Ex-territoriality as to the Island of Cuba. That following well established precedents in similar cases during the Military occupation of foreign or domestic territory by armies of the United States he seems to be entitled to be tried under the Fifth Amendment by a Court-Martial or Military Commission, but not by any Criminal Court of the Island of Cuba."

This protest was carefully examined in this office and an extended opinion given thereon, quoting authorities, in which it was held that, the question of jurisdiction of Courts-Martial was determined by the laws of the United States, not by those of Cuba; that in the condition of peace existing here the Court-Martial did not have jurisdiction over capital cases; that the words of the Fifth Amendment of the Constitution specifically except "cases arising in the land and naval forces" and it has been held by the Supreme Court of the United States (158 U. S., 109) that the words of the Fifth Amendment "when in actual service in time of war or public danger" apply to the Militia only and not to the land and naval forces of the United States; that the Civil Court existing by the authority of the Military Government had jurisdiction. This opinion was appealed from, and as suggested in that opinion, inasmuch as it would establish a precedent for like cases here, it was referred to the Attorney-

General of the United States, and the above opinion of this office, both as to non jurisdiction of Courts-Martial and as to the jurisdiction of the Civil Court, was sustained by him. The Attorney-General held: "1. In the present situation of affairs with regard to Cuba, neither a Court-Martial nor a Military Commission should try Private York. 2. Article 59, of the Articles of War, does not require him to be delivered to the Cuban Courts, but it is nevertheless proper to permit such courts to try him." Meanwhile the soldier has been acquitted by such court.

* * * * * * *

It is believed that the jurisdiction of General Courts-Martial ought to be made to extend to all cases of every character, whether capital offences or not (to them as well as to all others), whenever the Army is outside of the United States proper and expecially whenever the Army is in Military occupation of a foreign country, even though the courts of that country may be in performance of their functions under authority of the Military Commander, for, as in the case with Cuba, that Commander cannot at once change the laws and penalties to conform to American usage, notwithstanding the fact that the methods of procedure are different, no jury system exists, the language is unknown, the accused soldier is always at a disadvantage, and the penalties of the laws if applied, may be severe and unusual, differing from those of his own country.

---

## EXTRACT FROM REPORT OF CAPT. L. B. SIMONDS, ACTING JUDGE ADVOCATE, DEPARTMENT OF HAVANA, HAVANA, CUBA, DATED MAY 1, 1900.

In connection therewith, it is desired to earnestly recommend that such legislation be had as will extend the provisions of the fifty-eighth Article of War to our forces serving outside the jurisdiction of the Courts of the United States, wherever it may be, in time of peace, as well as in war, rebellion or insurrection. Two incidents have recently arisen in this Department, where owing to the failure of the Articles of War to provide for the trial and punishment, in time of peace, of soldiers charged with murder, the alleged offenders were turned over to the civil courts, the Judges and officials of which are natives of the Island, speaking a language, employing a procedure and having ideas of justice vastly different from our own. Is it justice that these men should be placed in jeopardy of life and liberty before a tribunal of this nature? These men are none the less citizens of the United States because of their service in the Army. But because of their Army service, they are required to be in a foreign country, should not the Government which sent them there protect them by its own laws? These conditions can be remedied by the amendment of the fifty-eighth Article of War, and such legislation is earnestly recommended.

# REPORT OF THE QUARTERMASTER-GENERAL.

# REPORT

OF

# THE QUARTERMASTER-GENERAL.

---

QUARTERMASTER-GENERAL'S OFFICE,
*Washington, D. C., October 16, 1900.*

SIR: I have the honor to submit the annual report of the operations of the Quartermaster's Department for the fiscal year ended June 30, 1900:

### FINANCIAL STATEMENT.

| | | |
|---|---|---|
| By act of Congress approved March 3, 1899, there was appropriated for the regular service of the Quartermaster's Department for the fiscal year ended June 30, 1900, the sum of | | $37,989,990.00 |
| During the fiscal year there was deposited to the credit of appropriations 1899-1900, amounts received from sales to officers, etc | | 1,407,702.83 |
| There was placed to the credit of appropriations by Treasury transfer warrants the sum of | | 25,250,000.00 |
| Making a total of | | 64,647,692.83 |
| Of this there was remitted to disbursing officers | $46,761,555.19 | |
| There was paid out on account of settlements made at Treasury for claims and accounts | 844,520.21 | |
| | | 47,606,075.40 |
| Leaving a balance on July 1, 1900, available for payment of outstanding obligations incurred, or fulfillment of contracts properly entered into within the fiscal year of | | 17,041,617.43 |
| By act of Congress approved May 26, 1900, there was appropriated for military roads and bridges in Alaska the sum of | | 100,000.00 |
| Which sum remained on hand on June 30, 1900. | | |
| On July 1, 1899, there remained on hand from deficiency appropriation January 1, 1899, the sum of | | 28,382,541.32 |
| During the year there was placed to credit of this appropriation from proceeds of sales to officers the sum of | | 1,861,904.59 |
| Making a total of | | 30,244,445.91 |
| Of this there was remitted to disbursing officers | $380,905.19 | |
| There was paid on settlements made at Treasury of claims and accounts | 511,776.79 | |
| There was charged against appropriations by Treasury transfer warrants | 27,040,832.61 | |
| | | 27,933,514.59 |
| Leaving a balance on hand July 1, 1900, of | | 2,310,931.32 |

| | | |
|---|---|---|
| On July 1, 1899, there was on hand from regular appropriation for the service of the Quartermaster's Department pertaining to fiscal year ended June 30, 1899, the sum of | | $19,497,418.67 |
| And from appropriations pertaining to previous fiscal years the sum of | | 252,852.33 |
| And from appropriations for special and indefinite purposes, certified claims, etc., the sum of | | 200,147.91 |
| Making a total balance on hand of these appropriations of | | 19,950,418.91 |
| For specific purposes there was appropriated during the fiscal year ended June 30, 1900 | $416,481.23 | |
| During the year there was deposited and transferred to credit of appropriations other than those of 1900 as shown above, including the sum of $531,173.58 for Pacific roads for years 1898, 1899, and 1900, and also the sum of $37,673 for transportation of volunteers, war with Spain, and the sum of $1,051.85 reimbursement for bringing home remains of officers and others | 3,681,991.05 | |
| | | 4,098,472.28 |
| Making a total on hand from these appropriations of | | 24,048,891.19 |
| Of said amount there was remitted to disbursing officers the sum of | $6,028,242.36 | |
| There was paid out on account of Treasury settlements and transfers | 1,228,793.66 | |
| There was carried to surplus fund | 281,510.32 | |
| | | 7,538,546.34 |
| Leaving a balance on hand July 1, 1900, of | | 16,510,344.85 |

The total balances on July 1, 1900, from all appropriations pertainto the Quartermaster's Department are as follows:

| | |
|---|---|
| From appropriations regular service of the Quartermaster's Department fiscal year ended June 30, 1900 | $17,041,617.43 |
| From appropriation military roads and bridges, Alaska | 100,000.00 |
| From deficiency appropriation January 1, 1899 | 2,310,931.32 |
| From appropriations previous fiscal years and from indefinite and special appropriations | 16,510,344.85 |
| Grand total | 35,962,893.60 |

Of the $200,000 appropriated by act of December 18, 1897, for "Relief of people in mining regions of Alaska" there has been charged against the same on the books of this office during the fiscal year 1900 the sum of $2,758.05.

Of the $50,000,000 appropriated by act of March 9, 1898, for "National defense" there has been charged against the same on the books of this office during the past fiscal year the sum of $868.

Of the $3,630.15 appropriated by act of March 3, 1899, for claims for quartermaster stores and commissary supplies act of July 4, 1864, there has been charged against the same on the books of this office during the fiscal year 1900 the sum of $736.60.

## DUTIES OF THE QUARTERMASTER'S DEPARTMENT.

Under existing laws the Quartermaster's Department, under the direction of the Secretary of War, provides the Army with military stores and supplies requisite for its use, such as clothing and equipage, tents, band instruments, tableware and mess furniture, equipments for post bakeries, fuel, forage, stationery, lumber, straw for bedding for men and animals, all materials for camp and for shelter for troops and stores, furniture for barracks, such as bunks, benches, chairs, tables, lockers, heating and cooking stoves for use in public barracks and quarters, tools for mechanics and laborers in the Quartermaster's Department, furniture, text-books, papers, and equipment for post schools, reading matter for post libraries, wagons, ambulances, carts, saddles, harness, water supply, sewerage, plumbing, illuminating supplies, and heating for all military posts and buildings.

The Department is also charged with the duty of providing transportation, by land and water, for troops, munitions of war, equipments, and all articles of military supplies from the place of purchase to the several armies, garrisons, posts, and recruiting places.

Under act of Congress amending section 1661, Revised Statutes, for arming and equipping the militia, this Department supplies quartermaster stores, clothing, and equipage to the militia of the several States and Territories and transports the same to said States and Territories. It also furnishes transportation for ordnance and ordnance stores issued by the United States to the militia of the several States and Territories. It also transports the property for other Executive Departments on requisitions, payments therefor being made by the respective Departments to the carriers upon accounts forwarded through the Quartermaster-General's Office for that purpose.

This Department prepares the necessary plans and constructs all buildings at military posts, such as barracks, quarters, storehouses, hospitals, etc.; builds wharfs; constructs and repairs roads for military purposes; builds all necessary military bridges; provides, by hire or purchase, grounds for military encampments and buildings; contracts for all horses for cavalry, artillery, and for the Indian scouts, and for such infantry and members of the Hospital Corps in the field campaigns as may be required to be mounted; pays for all incidental expenses of the military service which are not provided by other corps.

The care and maintenance of national cemeteries is an additiona duty of this Department. It also provides suitable headstones to mark the graves of all soldiers, sailors, or marines who served during the late war, including those who have been buried in private cemeteries and other burial places.

Section 1139, Revised Statutes, makes it the duty of the Quartermaster-General, under the direction of the Secretary of War, to prescribe and enforce a system of accountability for all quartermaster's supplies furnished the Army, its officers, seamen, and marines.

## CLOTHING AND EQUIPAGE.

The sum of $8,481,151.83 was available during the last fiscal year for providing clothing and equipage supplies for the Army and the militia. Of this amount $5,626,195.33 was remitted to officers of the Department and requisitions for $133,333.85 issued on settlements made at the Treasury on account of claims, leaving a balance on hand June 30, 1900, of $2,721,622.65.

The demand for tentage having lessened, the manufacture of tents for this Department at the mail-bag repair shop of the Post-Office Department, this city, has been discontinued. The Department is now able to manufacture at the Philadelphia depot all the tents required.

Detailed information showing the principal articles of clothing and equipage supplies purchased and manufactured for and issued to the Army during the past fiscal year will be found in the accompanying report of Maj. W. S. Patten, the officer on duty in this office who is in charge of this branch of the work.

The issues to the militia of the several States and Territories during the fiscal year, including the militia of the District of Columbia, amounted to $286,396.60, which sum has been reimbursed to this Department.

Under the act approved February 24, 1897, clothing and equipage supplies were sold to the governors of the several States and Territories to the amount of $4,122.52. These funds, under the law, will be used to replace the articles sold.

The act of Congress making appropriations for the Regular and Volunteer Army, for the fiscal year 1900–1901, authorizes the Secretary of War, upon application of the governor of any State or Territory, "to replace the quartermaster supplies which the volunteers from said State or Territory carried into the service of the United States Army during the recent war with Spain, and which have been retained by the United States, exclusive of such supplies as have been allowed for in the office of the Auditor for the War Department, and such award accepted by a State."

With a view of ascertaining the intent of the above act, this office, on June 18, 1900, obtained the following opinion from the Judge-Advocate-General of the Army on the subject, which was approved by the Secretary of War:

> 1. That the act applies not only to stores brought into the United States service by volunteers from supplies furnished the States or Territories under the annual militia appropriation, but also supplies purchased by the States and Territories for which no claim has been allowed and accepted.
>
> 2. The act authorizes the property to be replaced, article for article, irrespective of its condition at the time it was accepted into the service of the United States.
>
> 3. The act does not require the article to be strictly new, but that issues can be made of tentage which has been used somewhat, but is still in a perfectly serviceable condition.

Claims are being presented under this law and settlements made in accordance with this decision. The value of settlements made to date amounts to $85,966.82.

The sum of $10,494.51 was expended during the last fiscal year for clothing and other quartermaster supplies for the Apache Indian prisoners of war located at Fort Sill, Okla.

All demands made upon this Department during the year for the various articles of clothing and equipage supplies were promptly met. Great care has been exercised to secure supplies conforming to standards and specifications.

In order to afford opportunity to bidders residing in different sections of the country to compete for clothing supplies, proposals for Eastern deliveries are now invited at Philadelphia, Boston, and Chicago, and bids are opened simultaneously at the three places named, and awards are made to the lowest responsible bidders, for delivery at either of the places mentioned.

## KHAKI CLOTHING.

Since my last annual report the quality of the khaki material for field uniforms has been greatly improved. A new standard and specifications conforming thereto have been adopted. It is of domestic production, possesses great strength, is water repellant, and the dye is fast and stands the prescribed tests, such as exposure to sunlight, boiling in solutions of soap and carbonate of soda, and steeping in peroxide of hydrogen ten volumes in strength.

Improvements have also been made in the manufacture of the khaki coats and trousers, and it is believed a high degree of perfection both in fit and workmanship has been reached.

### KHAKI SHIRTS.

The Secretary of War having authorized the supply of khaki colored shirts in lieu of the chambray shirts, a supply of khaki colored shirting material has been contracted for and its manufacture commenced.

### DARK-BLUE FLANNEL CLOTHING.

The attention of the Department having been called to the statement that the dark-blue flannel clothing when worn in campaign offers a very conspicuous mark to the enemy an experiment will be conducted at Fort Myer, Va., to determine the comparative range of visibility between a body of men wearing the dark blue and the khaki colored clothing. Upon the result of these experiments the subject of a change of color in flannel clothing will be given full consideration.

### VARIETY OF CLOTHING SUPPLIES.

The clothing supply of the Army at present involves a wide range in kind and weight of articles to be provided, suitable for the arctic, tropical, and our own climate.

For Alaska there are required, in addition to the heaviest class of Army clothing and fur caps, gauntlets, and blanket-lined canvas overcoats, such articles as German socks to be worn in connection with arctic overshoes, sweaters, Mackinaw overcoats, oilskin coat and trousers, moccasins, and shoe pacs. To cover the expense to the men of this extra issue of these articles, an additional money allowance of $29.31 is allowed troops serving in Alaska.

For Cuba, Porto Rico, and especially the Philippines, khaki garments and the lighest undershirts, drawers, and socks, all of cotton, are demanded.

As it frequently happens that troops are changed from tropical to colder climates, or vice versa, the men have to be reclothed to a great extent in such cases.

### KHAKI COLORED DUCK FOR TENTS.

Experiments have been made with duck for tents, by having a quantity dyed of same shade as the khaki material. A tent made therefrom was erected in January last. After nine months' exposure to snow, rain, and sun, it is found that the tent has retained its color, with no sign of mildew, and is still good, strong, and fit for service. The use of this duck for future manufactures of tents is contemplated.

### IMPROVED HOSPITAL TENTS.

Capt. Edward L. Munson, assistant surgeon, U. S. A., having invented and patented a hospital tent specially adapted for service in tropical countries, this Department, by authority of the Secretary of War, manufactured for trial in active service 100 of these tents, nearly all of which have been distributed. Full reports in relation thereto have not yet been received. Payment of royalty or other remuneration on any tents that have been or may hereafter be constructed for use of the United States Army has been waived by the inventor.

### LAY FIGURES EXHIBITING KHAKI FIELD UNIFORMS.

Orders have been given to construct a group of four lay figures to be placed in one of the War Department corridors for exhibition, so that visitors to the building may see the khaki and field uniforms and equipments of our Army as used in the Philippines.

### CAVALRY AND ARTILLERY HORSES AND MEANS OF TRANSPORTATION.

The following statement shows the number and cost of public animals, wagons, and harness purchased by this Department from July 1, 1899, to June 30, 1900:

| | Number. | Total cost. | Average cost each. |
|---|---|---|---|
| Cavalry horses | 1,590 | $171,044.06 | $107.58 |
| Artillery horses | 106 | 14,950.50 | 141.04 |
| Riding horses, for mounting infantry | 4,650 | 354,645.37 | 76.26 |
| Draft horses | 11 | 1,813.00 | 164.82 |
| Bell horses | 2 | 100.00 | 50.00 |
| Pack mules | 100 | 6,000.00 | 60.00 |
| Army wagons | 100 | 10,600.00 | 106.00 |
| Escort wagons | 600 | 57,590.00 | 95.98 |
| Wagonettes, or other kinds | 17 | 3,994.00 | 234.94 |
| Ambulances: | | | |
| Red Cross | 125 | 19,717.50 | 157.74 |
| 1900 pattern | 1 | 225.00 | 225.00 |
| Trucks, 2 and 4 horse | 7 | 2,550.00 | 364.29 |
| Dump carts | 35 | 2,262.86 | 64.65 |
| Dump carts, sanitary | 15 | 2,593.00 | 172.87 |
| Cart, spring | 1 | 45.00 | 45.00 |
| Express wagon | 1 | 125.00 | 125.00 |
| Water wagons | 8 | 2,054.50 | 256.81 |
| Spring wagons, delivery | 117 | 15,081.00 | 128.89 |
| Miscellaneous wagons | 10 | 1,666.00 | 166.60 |
| Wagon covers | 3,710 | 14,178.06 | 3.82 |
| Sleighs | 29 | 787.50 | 27.16 |
| Single sets harness | 2,437 | 38,903.74 | 15.96 |
| Cart harness | 10 | 200.75 | 20.07 |
| Pack saddles and parts | 240 | 7,509.75 | 31.29 |
| Aparejos and parts | 1,085 | 36,277.06 | 33.43 |
| Total | .......... | 764,913.65 | .......... |

The total cost of army ranges, ovens, field desks, paulins, typewriters, and office safes amounted to $136,015.45.

During the fiscal year 4,468 riding horses, 3,008 draft mules, 500 pack mules, 841 escort wagons, 116 ambulances, 78 spring delivery wagons, 25 light farm wagons, 21 Dougherty wagons, 6 5-ton drays, 4,616 sets wagon harness, 372 sets ambulance harness, and 56 sets of 6-mule wagon harness were shipped to the Philippines for use of the Army.

Approximately, 371,493 tons of coal were purchased during the year for transports. During the fiscal year forage was purchased and shipped to the Philippines, Cuba, and Porto Rico, as follows:

| | Pounds. |
|---|---|
| Oats | 70,960,574 |
| Hay | 93,997,890 |
| Bran | 1,207,640 |
| Barley | 30,000 |
| Straw | 348,743 |
| Carrots | 8,240 |

### SALE OF SURPLUS AND CONDEMNED ANIMALS.

During the past fiscal year there were sold, after advertisement, 80 surplus horses, for which the sum of $6,582.79 was realized, average price per animal, $82.28. There were also condemned and sold during the year 869 cavalry horses for $28,534.63, average price $32.83 each; 162 artillery horses for $5,488.10, average price each $33.88, and 174 draft horses for $8,690.75, average price $49.95 each.

In addition to the foregoing, 1,461 surplus mules were, under authority of the Secretary of War, sold for $137,261.87, an average of $93.95 each, and 470 condemned mules for $16,949.13, an average of $36.06.

When peace was declared with Spain there was a large number of mules on hand in excess of the needs of the service, and for this reason the number above given were sold. These sales were, however, immediately suspended when it became evident that a considerable number of mules would be required for service in the Philippines. The Department was able to supply all mules necessary during the fiscal year for draft purposes from those remaining on hand from the Spanish war.

During the year there were 772 horses and 658 mules lost, died, stolen, etc.

There remained on hand at the close of the fiscal year, according to the latest reports, 16,924 horses and 10,669 mules.

It is remarked that no full reports in relation to animals have been received from the Philippines, and it is believed that, when full reports are made, the numbers above stated as remaining on hand June 30, 1900, will be somewhat modified.

During the year a large number of wagons, ambulances, and harness, which were left on hand from the war with Spain, have been painted and put in serviceable condition for issue where needed.

### TRANSPORTATION.

During the past fiscal year transportation was furnished by rail, water, wagon, and stage, exclusive of the army transport service, for 747,399 persons; 18,455 animals, and 328,801 tons of material.

There was transported over bond-aided railroads 32,327 persons, 5,295 animals, and 85,470,713 pounds of freight.

One thousand two hundred and seventy-nine accounts for telegraphic service, amounting to $322,963.05, were examined in this office and transmitted for settlement during the year.

The cost of maintaining the twenty-six vessels owned by this Department, including the repairs thereto, amounted to $196,662.29. These vessels are exclusive of the army transports owned and chartered by this Department in connection with the army transport service, and comprise those used in harbors and for communication with sea-coast artillery posts in the United States.

### THE ARMY TRANSPORT SERVICE.

On July 1, 1899, there were in the service of this Department 19 transports and 2 hospital ships, which were all owned by the Department. Thirteen of these, with 1 hospital ship, were in service in the Atlantic fleet, and 6 transports and 1 hospital ship in the Pacific fleet. These 21 vessels have a total tonnage of 79,795, and a carrying capacity of 1,057 officers and 18,671 men.

During the past fiscal year there were five vessels purchased or transferred to the Department, as follows:

The steamship *Cassius*, having a tonnage of 3,458, was purchased from the Navy Department for the sum of $160,594, payment being made from the allotment to War Department for appropriation for "National defense." This vessel was renamed *Sumner*, and was fitted up as a troopship by the Navy Department at the Norfolk Navy-Yard, at a total cost of $649,576.89, which sum includes an expenditure of $194,922.43 for auxiliary machinery, fittings, and supplies placed upon the ship.

The *Sumner* sailed from New York for Manila on March 31, 1900, via the Suez Canal, with 46 officers, 649 recruits, and 10 other passengers. She arrived at Manila on May 23, 1900, without casualty. She is now engaged in running between Nagasaki, Japan, and Taku, China, in connection with the requirements of our troops serving in China.

The steamship *Columbia*, having a tonnage of 2,976, was purchased from her owners, the North American Mail Steamship Company, for the sum of $147,200, which was regarded as a very reasonable price. Her name was changed to *Rosecrans*. This ship, having previously been in the service of the Department under charter and being already fitted to carry troops, was sent to Seattle to assist in carrying troops and supplies to Alaska. She has since been transferred to the Pacific fleet of transports and is now in Philippine waters.

The U. S. S. *Badger* and *Resolute*, which had been purchased by the Navy Department for service in the war with Spain from appropriation "National defense," were, by order of the President, transferred to the War Department and were fitted up for the Army transport service.

The *Badger* was renamed *Lawton* and was fitted up for service in connection with the transportation of troops and supplies to Alaska at a cost of $125,000. Her tonnage is 3,497. She is now engaged in that service and is also being utilized to return destitute citizens from Alaska to the United States. She can carry 700 passengers.

The steamship *Resolute* was renamed *Rawlins*. Her tonnage is 2,898. She was fitted up, under contract with the William Cramp & Sons' Ship and Engine Building Company of Philadelphia, at a cost of $100,877. The work on this vessel was completed about the close of the last fiscal year, and she is now in service transporting troops and supplies between New York and the West Indies.

The steamer *Dickinson*, which was renamed *Seward*, was purchased at Seattle from Mr. E. E. Caine for the sum of $145,000. This vessel was in course of construction when purchased, and such changes as were required to fit her for service as a dispatch boat for the Department of Alaska were made while she was being completed. These alterations consisted of additional rooms for accommodations of passengers, providing additional lavatory, heating and lighting facilities, life boats, refrigerating and ice plant, etc., costing in the aggregate $13,879.75. The vessel is of wood, and is very strongly built with a view to moving safely through ice; is 1,200 tons burden, and is thoroughly suited and equipped for a dispatch boat in Alaskan waters.

### REGULAR STEAMSHIP LINES BETWEEN NEW YORK AND THE WEST INDIES.

Two regular lines of transport ships were maintained during the year between the United States and the West Indies. One sailing weekly from New York to San Juan, P. R., thence to Santiago, Cuba, and return to New York; the other sailing about every ten days from New York to Matanzas, Habana, and Cienfuegos, Cuba, thence returning to Habana and New York. For this service seven transports have been employed, viz, the *Buford*, *Burnside*, *Crook*, *Kilpatrick*, *McClellan*, *McPherson*, and *Sedgwick*.

### REFITTING OF ARMY TRANSPORTS.

During the past fiscal year the transports *Crook* and *Sedgwick* have been refitted. The former by John N. Robbins Company, of New York, at a cost of $303,217.47, and the latter by the same company at a cost of $205,768. Both of these are capable of carrying comfortably 50 officers and 1,000 men each.

The refitting of the transports *Thomas*, *Logan*, and *Meade* and the hospital ship *Missouri*, noted in my last annual report as being in progress, was duly completed at a cost of $283,391.43, $304,351.50, and $314,038.62, respectively.

The *Thomas* sailed from New York to Manila, via Suez Canal, November 4, 1899, carrying 1,420 passengers. The *Meade* sailed on November 16, 1899, with 1,169 passengers, and the *Logan* on November 20, 1899, carrying 1,465 passengers. All these transports made successful voyages and arrived in Manila without casualty.

The hospital ship *Missouri* sailed from New York to Manila, Suez Canal route, September 30, 1899, with a full complement of medical officers, nurses, and enlisted men of the Medical Corps, and arrived in Manila on November 28, 1899. The vessel made the voyage from Manila to San Francisco with sick and wounded soldiers on board, arriving at San Francisco February 13, 1900. Upon an inspection of the ship it was found that to make her satisfactory for a hospital ship on the Pacific extensive alterations and repairs at a considerable cost were necessary, and as each of the Army transport ships was provided with hospital accommodations ample for the returning invalid soldiers from the Philippines, it was decided to convert the *Missouri* into a transport ship of the freight class. This was accordingly done, and the ship renamed the *Egbert*. The vessel has been used for the transportation of supplies to Alaska during the past summer, and is now attached to the Pacific transport fleet.

The transport *Hancock* was refitted during the year, in San Francisco, by the Union Iron Works, at a cost of $456,420.52. She is now a modern troopship, and doing excellent service.

Two large transports, the *Buford* and *Kilpatrick*, are now being refitted for service on the Pacific. The Newport News Shipbuilding and Dry Dock Company, of Virginia, is refitting the *Buford* under contract, at a cost of $397,637, and the John N. Robbins Company, of

New York, is refitting the *Kilpatrick* under contract, at a cost of $408,000. Both these transports will be completed about October 31, 1900, and are scheduled to sail from New York to Manila, via Suez Canal route, the early part of November, 1900.

The fitting up of transports is now made in a most thorough and complete manner, the specifications are prepared with great care, and the subject given most attentive study. The valuable experience gained in the work of refitting previously done in other transports enables the Department to now have this work performed at the minimum cost. Every suggestion looking to improvements that would be conducive to the comfort and well being of the troops traveling thereon has been adopted, so that it is believed that the transports of this Department which have been specially fitted up for our transportation service are not excelled by the transports of any other nation of the world. The representatives of England, France, Germany, Japan, and Russia have requested and have been furnished copies of the plans and specifications upon which our transports have been refitted.

The transport *Hooker*, which had been fitted up for a cable ship for the Signal Service, arrived at Manila from New York on June 26, 1899. On August 11, 1899, she was ordered to proceed to Hongkong, China, for coaling, and on leaving Manila ran aground near Corregidor Island. Every effort to save the vessel proved unavailing, and the ship became a total loss. The larger part of the cable was saved. The original cost of this vessel, including its fitting up as a cable ship, was $171,213.

Since the close of the last fiscal year the transport *Burnside* has been taken out of commission in the Atlantic transport fleet and fitted up in New York to transport deep-sea cable to the Philippines for the Signal Corps of the Army. The ship is provided with three tanks, in which are stored about 550 miles of cable, and is also provided with all necessary appliances for laying the cable.

The following is a list of the Army transports owned by this Department and in service on June 30, 1900, showing their tonnage, carrying capacity, and where employed:

| Name. | Tonnage. | Passenger capacity. | | Cargo capacity, tons. | Remarks |
|---|---|---|---|---|---|
| | | Officers. | Men. | | |
| Buford | 3,732 | 61 | 1,000 | 1,000 | Being fitted for Pacific. |
| Burnside | 2,194 | 27 | 273 | .......... | Fitted for Pacific cable ship. |
| Crook | 4,126 | 54 | 1,000 | 1,500 | Atlantic fleet. |
| Egbert | 2,903 | 21 | 650 | 1,500 | Pacific fleet. |
| Grant | 5,658 | 68 | 1,836 | 2,400 | Do. |
| Hancock | 5,000 | 54 | 1,062 | 1,500 | Do. |
| Ingalls | 1,147 | 26 | 260 | 500 | Under orders for San Juan as dispatch boat. |
| Kilpatrick | 3,722 | 61 | 1,000 | 1,000 | Atlantic fleet. |
| Lawton | 3,497 | 60 | 700 | 1,600 | Pacific fleet. |
| Logan | 5,673 | 86 | 1,648 | 2,435 | Do. |
| McClellan | 2,792 | 30 | 200 | 1,800 | Atlantic fleet. |
| McPherson | 3,656 | 66 | 500 | 2,000 | Do. |
| Meade | 5,641 | 60 | 1,171 | 1,430 | Pacific fleet. |
| Rawlins | 2,898 | 59 | 500 | 1,000 | Atlantic fleet. |
| Relief | 3,095 | 20 | 252 | .......... | Hospital ship, Pacific fleet. |
| Rosecrans | 2,976 | 26 | 636 | 1,300 | Pacific fleet. |
| Sedgwick | 4,770 | 59 | 1,000 | 1,025 | Atlantic fleet. |
| Seward | 1,200 | 15 | 200 | 600 | Dispatch boat in Alaska. |
| Sheridan | 5,673 | 93 | 1,843 | 2,400 | Pacific fleet. |
| Sherman | 5,780 | 69 | 1,750 | 2,400 | Do. |
| Sumner | 3,458 | 57 | 780 | 500 | Do. |
| Terry | 1,338 | 81 | 400 | .......... | Out of commission in New York |
| Thomas | 5,796 | 95 | 1,654 | 2,204 | Pacific fleet. |
| Warren | 4,243 | 42 | 1,242 | 2,000 | Do. |
| Wright | 777 | 5 | 80 | 300 | Being repaired for dispatch boat. |
| Total | 91,745 | 1,295 | 21,637 | 32,394 | |

The following is a list of the steam lighters and tugs which were maintained by the Department at the ports in Cuba and Porto Rico during the fiscal year for the distribution of supplies to the garrisons on those islands:

| Name. | Class. | Where employed. |
|---|---|---|
| Ord | Tug | Manzanillo, Cuba. |
| Reno | do | Habana, Cuba. |
| Reynolds | do | Do. |
| Richardson | do | Matanzas, Cuba. |
| Slocum | do | San Juan, P. R. |
| Gibbon | do | Nuevitas, Cuba. |
| Weitzel | do | Santiago, Cuba. |
| Baker | Steam lighter | Habana, Cuba. |
| Poe | do | Do. |
| Williams | do | Manzanillo, Cuba. |
| Kearney | do | Habana, Cuba. |
| Esparanza | Sloop | Gibara, Cuba. |
| Miguel | do | Do. |

Since the close of the fiscal year the steam lighter *Poe* was withdrawn from the service in Cuba and is now on duty as a harbor boat at Fort Barrancas, Fla.; the tugs *Reno* and *Reynolds* are now in New York, their services being no longer required in Cuba, and the tug *Weitzel* is under orders to proceed from Santiago to New York. These three tugs will probably be made available for service in the harbor of New York and dispense with the service of those which are nor hired for the docking and handling of the transport ships.

The tug *Slocum* was withdrawn from the service at San Juan, P. R., and was sent to New York, where she was put in thorough repair and sent to San Francisco for service in handling the army transport ships and lightering passengers and supplies. The tug left New York for San Francisco on July 12, 1900, via the Straits of Magellan, and arrived safely in San Francisco on October 6, 1900.

Three small transport ships were in service in Cuba during the year, viz, the *Ingalls*, at Habana; the *Wright*, at Santiago (as dispatch boats for the commanding generals at those places), and the *Terry* in service of the Medical Department for a short period.

The reduction of the garrisons of the island rendered unnecessary the service of these vessels, and they have been withdrawn from there, the *Terry* and *Wright* being sent to New York and put out of commission, and the *Ingalls* sent to San Juan for service as a dispatch boat for the Department of Porto Rico. It is believed that the *Ingalls* would be a useful vessel for the inter-island service in the Philippines, and the subject of sending her there and sending the *Wright* to San Juan in her place, or sending the *Wright* to the Philippines, is now under consideration.

During the year the War Department purchased from the Navy Department two small steamers, the *Kanawha* and *Viking*, for the customs service in Cuba, the former at a cost of $50,000 and the latter $30,000, payment of which was made by the transfer of the amounts from the appropriation for "National defense."

The vessels were fitted up and sent to Cuba, where, after trial, they were found unsuited for the customs service, and they have been transferred to the army transport service. The *Kanawha* has been assigned to service at Habana as a dispatch boat for the Division of Cuba. The *Viking* is under orders to be sent to the States for use where needed.

The latter part of June, 1900, five of the army transports were specially prepared for and used to transport 1,273 male and female teachers from the several ports in Cuba to Boston, Mass., where they had been invited by the authorities of Harvard University. In August, 1900, these teachers were returned to Cuba by the army transports. No casualty occurred during the voyages to and from this country.

### ARMY TRANSPORT SERVICE ON THE PACIFIC.

On July 1, 1899, preparations were being made for the transportation of an army to the Philippines and the return from there of the volunteer troops whose term of service had expired.

For this service there were on the Pacific five owned transport ships, the *Grant*, *Sherman*, *Sheridan*, *Hancock*, and *Warren*, with a combined carrying capacity of 326 officers and 7,733 enlisted men. The Department at that time had eight vessels under charter, with a carrying capacity of 284 officers and 6,804 men. Twenty additional ships were chartered for the service and fitted up for the accommodation of troops. These last mentioned had a carrying capacity of 371 officers and 14,328 men. Upon the foregoing ships were transported from San Francisco, Seattle, and Portland to the Philippines 42,111 passengers, which included officers, enlisted men, nurses, civilian employees, and others.

During the fiscal year there were transported from the Philippines to the United States 20,654 persons, consisting of officers, enlisted men, and others. These include the return to the United States for muster out of service of the following volunteer troops, viz: Second Oregon, Tenth Pennsylvania, First Nebraska, Utah Artillery, First Colorado, First California, California Artillery, First Wyoming, Wyoming Artillery, First North Dakota, First Idaho, First South Dakota, Thirteenth Minnesota, First Montana, Twentieth Kansas, First Washington, Fifty-first Iowa, First Tennessee, Nevada Cavalry, and Volunteer Signal Corps.

The chartered steamship *Morgan City*, which sailed from San Francisco on August 10, 1899, with 8 officers, 675 recruits, 25 enlisted men, nurses, and postal clerks, on the morning of September 2, 1899, while making passage through the Inland Sea of Japan, in charge of a local pilot, struck a rock, and upon being floated by the rise of the tide, it was found the vessel was leaking badly. She was beached and became a total wreck. The officers and men were all safely landed on the shore of the small island of Innoshima. The officers in command of the troops visited the mainland and communicated by telegraph to the United States minister at Tokyo the conditions existing, who promptly took measures for the relief of the stranded troops. A war ship of the Japanese Government was sent to offer any needed assistance, and through the courtesy of the Japanese Government, abundance of food supplies were purchased and sent to the troops. These stranded troops were subsequently taken to Nagasaki, where they were embarked on the chartered transport *Ohio*, which was dispatched from Manila for the purpose, and arrived at Manila on September 19, 1899.

With this exception no serious accident has occurred on the troop ships.

### TRANSPORTATION OF ANIMALS AND SUPPLIES TO THE PHILIPPINES.

During the fiscal year three large troopships were transferred from the Atlantic to the Pacific fleet, viz, *Thomas*, *Meade*, and *Logan*, which increased the number in the latter fleet to eight. With these transports semimonthly sailing between San Francisco and Manila was arranged, so that a transport would leave each port on the 1st and 16th of each month. In the event of the sailing days occurring on Sunday the ship leaves San Francisco on the preceding day.

In addition to the accommodation for troops and their baggage these ships have a large freight-carrying capacity and are used in transporting a large quantity of quartermaster, subsistence, medical, and other supplies for the army in the Philippines. The increase in the military force serving there greatly augmented the demand for animals for the cavalry and artillery, means of transportation, and the supplies for the army, making additional freight and animal ships necessary.

During the fiscal year fifteen steamships and one sailing vessel have been under charter for the transportation of animals and freight.

For the transportation of animals special care has been exercised in selecting suitable ships. Transports of large carrying capacity are necessary, as an ample supply of forage must go on each ship to sustain the animals en route.

For the safety and comfort of the animals, stalls are constructed on the ships of smoothly planed lumber, and material placed on board for padding the stalls in case the animals become chafed. Extra stalls are provided to enable the animals to be changed from one to another, and space left on the decks, where the animals may be exercised when the sea is smooth. Slings, made of heavy canvas, of sufficient strength to support the weight of the animals, are also provided, if their use should become necessary. Special attention has been given to the subject of ventilation. Electric plants have been installed for lighting the ships and running fans for forcing fresh air between decks occupied by the animals and for exhausting the foul air in them, which are supplemented by wind sails attached to the hatches and ports. Condensing apparatus is placed on the ships to provide an ample supply of fresh water. A hospital is provided on each ship, where the sick animals may be treated. A veterinary surgeon and a corps of experienced care takers for the animals accompany each ship. In a word, everything is provided on these ships that will be conducive to the safety and comfort of the animals during their long voyage.

A corral has been established at Honolulu, where the animals are landed for rest and recuperation before resuming the voyage to Manila. Hilo, another island of the Hawaiian group, was also used for this purpose during the prevalence of the bubonic plague at Honolulu.

Through the courtesy of the Japanese Government, arrangements were made to permit the animals en route to the Philippines going by the northern route to be landed at Kobe for rest and recuperation, and a large number have been landed at that port instead of stopping at Honolulu or Hilo.

There have been shipped from the Pacific coast during the fiscal year 10,315 animals. This service, as a rule, has been most satisfactorily performed, the animals generally arriving at the end of their voyage in good condition and the losses en route not greatly, if at all, exceeding the percentage of loss among similar numbers of animals when transported on land, except in two shiploads, which suffered loss and damage by encountering severe storms, viz: The steamship *Siam*, which sailed from San Francisco on August 19, 1899, with 47 horses and 326 mules on board, ran into a typhoon off the coast of the island of Luzon, and arrived in the harbor of Manila with only 16 mules alive and fit to land; and the steamship *Victoria*, which left Seattle on November 23, 1899, with 404 animals on board, sailed via the northern route, encountered a severe storm, and was compelled to return to Seattle four days later. Eighty-seven of the animals on board were either killed or subsequently died of their injuries, and the remainder were too badly maimed and bruised to permit of their reshipment at that time. The *Victoria* was then sent to San Francisco, from whence she took a load of animals to Manila via Honolulu and the southern route.

For the large number of animals in the Philippines it is necessary to provide many tons of forage. Hay and grain are purchased largely in the markets of the North Pacific coast and shipped thence direct to Manila. It has been ascertained after trial that in case of shortage of American forage the native forage, consisting of rice straw, unhulled rice, and native grass can be fed to the animals during the emergency with fair results. This native forage can, however, be obtained only in a very limited quantity.

During the fiscal year 44 ships were employed under charter by this Department in connection with the transport service. These vessels have been discontinued and charters canceled as rapidly as their services could be spared. At the close of the fiscal year 11 chartered vessels remained in service.

### ARMY TRANSPORT SERVICE IN THE PHILIPPINES.

Upon the military occupation of Manila, in 1898, the supply of the army serving there was confined to the delivery of military supplies in the harbor of Manila by the transport ships. These supplies had to be lightered from the ships to the quartermaster's depot, at a distance of 2 or more miles, and for this purpose the native cascoes and lorches had to be depended upon. These proved to be entirely inadequate for the service.

The chief quartermaster was accordingly authorized to purchase the necessary steam lighters, tugs, and launches to meet the lighterage requirements in Manila Harbor, so that this work could be accomplished expeditiously.

The distribution of the army serving in the Philippines to the various important islands of the archipelago rendered necessary the detail of ships for the transportation of troops and supplies from Manila to those islands. For this purpose the chartered steamships *Pennsylvania* and *Indiana* were ordered, on their arrival in Manila from San Francisco in February and March, 1900, to remain in Philippine waters under the orders of the chief quartermaster at Manila for local service around the islands. These ships had previously been fitted for carrying troops and were well equipped for the purpose, and in addition could carry large quantities of stores.

It is designed to replace these ships by two other ships which are owned by the Department as soon as they can be fitted up and made suitable for the service.

The coaling of army transport ships in the harbor of Manila has been a perplexing question, the lightering of coal to the ships out in the harbor and the transfer from the lighters to the ship bunkers by hand being a slow and costly process.

A vessel was purchased in Manila and anchored in the bay for use as a collier, upon which hoisting apparatus, with a capacity for delivering to the transport ships 600 tons of coal per day, was installed.

Additional colliers being needed, efforts were made to secure suit able vessels in China and Japan without avail, and the sailing ship *St. Mark*, with a capacity for 2,700 tons of coal, was purchased during the fiscal year in New York and fitted up and sailed from Norfolk, Va., for Manila, via Cape Horn, with a load of coal on board, on July 11, 1900. The price paid for this ship was $50,000.

Another sailing ship, the *Cyrus Wakefield*, has been purchased in San Francisco since the close of the fiscal year, at a cost of $45,000, and dispatched to Nanaimo for a load of coal, whence she will sail for Manila.

These ships, on arrival in Manila, will be provided with hoisting apparatus and anchored in the harbor for coaling purposes. They will be known as colliers Nos. 1, 2, and 3.

At certain seasons typhoons are of frequent occurrence in Manila Harbor, during which it has been impossible to deliver coal to the ships. With these colliers it will be practicable to coal the ships during a storm, the collier being towed under the lee of a point at Cavite, protected from the violence of the storm, where coal may be transferred to the ships with safety.

### TRANSPORTATION SERVICE BETWEEN THE STATES AND CUBA, PORTO RICO, HONOLULU, AND THE PHILIPPINES.

There were transported on army transports during the fiscal year:

| | Passengers. | Animals. | Freight. *Tons.* | Packages. |
|---|---|---|---|---|
| From United States to Cuba | 4,362 | 23 | 56,128 | 871,936 |
| From Cuba to the United States | 8,233 | 1,881 | 3,943 | 44,192 |
| From United States to Porto Rico | 1,730 | 6 | 35,854 | 505,111 |
| From Porto Rico to United States | 2,077 | 498 | 706 | 8,785 |
| From United States to Honolulu | 148 | | 2,930 | |
| From Honolulu to United States | 55 | | 20 | |
| From Honolulu to Manila | 228 | | 1,190 | |
| From United States to Philippines | 46,870 | 10,315 | 191,090 | 1,093,812 |
| From Philippines to United States | 20,654 | | | |
| From United States to Alaska, including lumber | 882 | 86 | 9,672 | |
| From Manila to China | 1,345 | | | |
| From Manila to other points in Philippines | 17,838 | 588 | 8,150 | |
| Total | 104,422 | 13,397 | 310,683 | 2,523,836 |

From May 25, 1898, to June 30, 1900, a total of 333,932 passengers have been transported in going to and from Cuba, Porto Rico, Honolulu, Philippines, and the United States, and going from Philippines to China. Since the close of the fiscal year 27,683 passengers (approximately) have been transported, which includes the troops going from the United States to China and the Philippines.

### REPATRIATION OF SPANISH PRISONERS IN THE PHILIPPINES.

The transportation of the Spanish prisoners from the Philippine Islands to Spain under the terms of the treaty of peace with the Spanish nation has continued under the contract with Messrs. J. M. Caballos & Co., as the prisoners have been released from the hands of the Filipinos and brought to Manila, from whence they are shipped to Spain.

The bills presented for the services rendered under the contract show that there have been transported from the Philippine Islands to Spain 1,589 officers, 13,477 enlisted men, and 2,308 other persons, a total of 17,374 prisoners. Settlement of these bills has been made in part by the payment of the sum of $1,304,647.50.

### EXPENDITURES, ARMY TRANSPORT SERVICE.

The reports of expenditures at the principal ports of operations show that during the year there has been expended—

| | |
|---|---|
| For purchase of vessels of all classes | $559,150.00 |
| For charter of ships | 6,974,004.65 |
| For fitting up and repair of transport ships | 5,800,312.18 |
| Total | 13,333,466.83 |

It is gratifying to report that the work pertaining to the transport service performed during the year has been accomplished without the sacrifice of a single human life by reason of any defect in the condition of the transport service.

### REGULATIONS.

The regulations of the army transport service were revised and approved by the Secretary of War on May 5, 1900.

On November 20, 1899, Maj. Charles Bird, quartermaster, U. S. A., in charge of the division of transportation, this office, in accordance with the instructions of the Secretary of War, visited the Philippines and other places, with a view to inspecting the condition of the transport service at the various places, and obtaining other important information for the use of the Department. He returned here on March 30, 1900, and submitted a full report containing much valuable data, which has been very helpful in the transaction of the public business of this Department.

Maj. J. B. Bellinger, quartermaster, U. S. V. (captain and assistant quartermaster, U. S. A.), performed Major Bird's duties in this office, during the latter's absence, in a most efficient and satisfactory manner.

### GENERAL SUPERINTENDENTS, ARMY TRANSPORT SERVICE.

There are two general superintendents of the army transport service, with established offices at San Francisco, Cal., for the Pacific, and New York for the Atlantic. During the past fiscal year Maj. O. F. Long, quartermaster, U. S. V. was in charge of the former, and Maj. F. B. Jones, quartermaster, U. S. A., was in charge of the latter until May 10, 1900, when, by reason of his sickness, Col. A. S. Kimball, assistant quartermaster-general, U. S. A., in addition to his other duties, acted as general superintendent, and so continued until August 25, 1900, when Maj. Carroll A. Devol, quartermaster, U. S. V., was assigned to duty as general superintendent at New York City.

The general superintendents direct the affairs of the army transports leaving and arriving at their respective ports, supervising their loading, unloading, repair, etc. The work intrusted to their care is exceedingly important, and was efficiently performed.

### BARRACKS AND QUARTERS.

Under the acts of Congress approved March 3, 1899, and February 9, 1900, the sum of $4,000,000 was appropriated for barracks and quarters.

The law authorized an expenditure of $130,000 from the above sum, or so much thereof as might be necessary, for the purchase of a site or sites for the location of barracks for the accommodation of a garrison in charge of fortifications, if in the judgment of the Secretary of War the emergency exists.

The sum of $3,266,912.34 was expended during the fiscal year, so far as reported, for construction and repair of buildings, for temporary buildings, tent floors, etc., at camps in the United States; for material and labor to construct shelter for troops in Alaska, Cuba, Porto Rico, Philippines, and for rent, which amount included the sum of $126,000 for the purchase of land near Galveston, Tex., for site of new post (Fort Crockett).

### MILITARY POSTS.

The sum of $670,000 was appropriated by act approved March 3, 1899, "for the construction of buildings at and the enlargement of such military posts as in the judgment of the Secretary of War may be necessary, and for the erection of barracks and quarters for the artillery in connection with the adopted project for seacoast defense."

The law provided that from this sum $100,000 may be used for the purchase of suitable building sites, and also that the sum of $50,000 shall be used for the erection of barracks and quarters, gun sheds, and stables for one battery of light artillery at Fort Leavenworth, Kans.

The $670,000 above mentioned was apportioned as follows:

| | |
|---|---|
| Fort Adams, R. I | $70,568.00 |
| Fort Banks, Mass | 21,143.00 |
| Fort Caswell, N. C | 30,601.50 |
| Fort Casey, Wash | 6,520.10 |
| Fort Columbia, Oreg | 947.40 |
| Fort Dade, Fla | 9,040.00 |
| Fort Du Pont, Del | 46,202.00 |
| Fort Flagler, Wash | 23,162.70 |
| Fort Fremont, S. C | 23,353.54 |
| Fort Greble, R. I | 23,623.00 |
| Fort Howard, Md | 45,400.00 |
| Fort Leavenworth, Kans | 49,570.27 |
| Fort Pickens, Fla | 2,510.39 |
| Fort Preble, Me | 37,009.75 |
| Fort Rodman, Mass | 3,399.59 |
| Fort St. Philip, La | 19,265.25 |
| Fort Schuyler, N. Y | 18,124.00 |
| Fort Strong, Mass. (purchase of land) | 18,714.18 |
| Fort Totten, N. Y | 31,136.00 |
| Washington Barracks, D. C | 7,884.00 |
| Fort Washington, Md | 46,202.77 |
| Fort Williams, Me | 80,016.63 |
| Miscellaneous | 53,994.01 |
| Printing and advertising | 1,611.92 |
| Total | 670,000.00 |

The sum of $275,000 was appropriated by act approved March 3, 1899, for the construction and repair of hospitals at military posts already established and occupied, including expenditure for construction and repairs required at Army and Navy Hospital at Hot Springs, Ark., except quarters for officers. Of this sum $250,000 was apportioned for hospitals at various military posts in the United States and Porto Rico, $12,745.73 of which being alloted to the latter place.

Under authority of the above-mentioned act the sum of $24,450.50 was expended for the construction of an additional ward at the Army and Navy General Hospital, Hot Springs, Ark., which included plumbing and gas piping.

### WATER SUPPLY, SEWERAGE, HEATING, LIGHTING, ETC.

During the fiscal year the sum of $524,732.33 was expended from appropriation "Army transportation" for structural water supply, sewerage, drainage, and plumbing; $180,195.97 for roads, walks, grading, bridges, etc.; $35,201.03 for wharves, and $195,281.91 for unclassified items relating to work under the above-mentioned heads.

From the appropriation "Regular supplies" the sum of $272,776.92 was expended during the fiscal year for heating, lighting, and cooking apparatus; construction of bakehouses, etc.

### CONSTRUCTION OF ARTILLERY POSTS.

Considerable progress has been made during the past fiscal year in connection with the erection of new buildings, alterations, and additions to existing structures, and other improvements at the various artillery posts in the United States with a view to providing and increasing the accommodations at these posts. A portion of the work at said posts has already been completed and a portion is under contract and in course of construction. Much remains, however, to be done to provide complete accommodations for the full garrisons required for one relief for the guns. The work will be carried forward as rapidly as funds now available and future appropriations by Congress will admit. Detailed information showing the various buildings and other improvements authorized at these posts is set forth in the accompanying report of the officer on duty in this office who has special charge of this branch of the work.

### DESTRUCTION BY STORM.

The terrible storm that visited Galveston, Tex., on September 8, 1900, entirely destroyed the following buildings at the places as set forth below:

*At Fort San Jacinto.*—Twenty-one frame buildings, including one barrack building, four sets of officers' quarters, noncommissioned officers' quarters, storehouse, shops, stable, bakehouse, administration building, hospital, hospital stewards' quarters, mess hall, and oil house.

*At Fort San Jacinto (10-inch gun battery).*—A temporary storehouse, barrack, mess house, and oil house.

*Fort Travis (Bolivar Point).*—A wharf, a temporary storehouse and a temporary oil house.

*Camp Hawley.*—A barrack, 3 sets of officers' quarters, bachelor officers' quarters, hospital, storehouse, guardhouse, mess hall, bath house, bakehouse, etc.

*Fort Crockett.*—In June, 1900, contract was made for the erection of the necessary buildings at this point, costing $67,832.48, including plumbing and electric wiring. Only a small portion of the work had been accomplished when it was destroyed by the above-mentioned storm.

### CONSTRUCTION AT INTERIOR POSTS.

The construction of barracks for one company at Fort Meade, S. Dak.; bachelor officers' quarters and two double officers' quarters at Fort D. A. Russell, Wyo., and a double set of officers' quarters and a barrack for 100 men at Fort Lincoln (Bismarck), N. Dak., have been completed.

### JEFFERSON BARRACKS, MO.

The construction of new administration building, oil house, addition to storehouse, roads, driveways, sinking well, and the grading and extension of sewer system at this post was contracted for in June, 1900, at a cost, including plumbing and electric wiring, of $89,785.30, and the work is now in progress.

### FORT LEAVENWORTH, KANS.

Congress, under appropriation "Military posts," act approved March 3, 1899, provided $50,000 for the erection of barracks, quarters, gun sheds, and stables for one battery of light artillery at Fort Leavenworth, Kans. Congress also, by joint resolution approved February 9, 1900, set aside $60,000 from the hospital appropriation for the fiscal year ending June 30, 1900, for the construction of a hospital at this post. The Secretary of War on April 4, 1900, allotted a further sum of $200,000 from the Regular Army appropriations of the fiscal year 1900, making a total of $310,000 available for the reconstruction and enlargement of this post. Steps were at once taken to begin work, and on June 11, 1900, the following buildings were placed under contract and work commenced, the total expenditure involved being $303,469.77:

One hospital (48 beds).
Eight double officers' quarters (16 sets) and bachelor officers' quarters (24 sets).
One artillery barrack for 120 men.
One light-artillery stable.
Two cavalry stables.
One light-battery gun shed.

### GENERAL HOSPITALS.

To complete the general hospital at the Presidio of San Francisco Cal., a guardhouse, a dining hall and kitchen for officers, a boiler and power building with heating and lighting plant, a filtration plant, and a refrigerating plant were erected and numerous improvements made during the year to grounds and buildings at a cost of $69,000.

Since the close of the fiscal year the buildings and appurtenances of the hospital at Savannah, Ga., were sold at public auction for the sum of $17,100 and the lease of the hospital site terminated.

Steps have also been taken to dispose of the buildings of the Josiah Simpson Hospital near Fort Monroe, Va.

### FORT BAYARD SANITARIUM.

Fort Bayard, N. Mex., having been discontinued as a military post, and a sanitarium established there for officers and enlisted men suffering from tuberculosis, the sum of $24,222.66 has been allotted from appropriations of the Quartermaster's Department for repairs to buildings, water supply, and sewer improvements at that place.

During the fiscal year the approximate sum of $241,415.38 was expended for preparing camp grounds and restoring same to former condition, which includes the expenditure of $165,634.93 for the model and regimental or casual camps at the Presidio of San Francisco and the detention camp at Angel Island, California.

### SPECIAL EXPENDITURES.

The cost of building material purchased in the United States and of labor and additional material employed in the construction of shelter for troops, structural water supply, during the fiscal year, from appropriation "Barracks and quarters and Army transportation," amounts, as far as reported, to $234,037.91 for the department of Porto Rico, $353,664.94 for department of Alaska, and $211,932.24 for division of the Philippines.

### REIMBURSEMENT OF EXPENDITURES MADE BY QUARTERMASTER'S DEPARTMENT IN CUBA.

The President on July 11, 1899, having directed that thereafter all expenditures necessary for construction, repair, or lease of buildings or wharves for public purposes in Cuba be paid for out of the revenues of the island, upon the authorization and approval of the division commander, all expenditures made in Cuba from barracks and quarters appropriation for the above-mentioned purpose subsequent to July 11, 1899, have been reimbursed from Cuban revenues.

In accordance with the instructions of the Secretary of War, the sum of $342,611.84 was on January 4, 1900, reimbursed the United States from Cuban revenues, on account of the construction and equipment of the railway and wharf at Triscornia (Habana Bay), this being the total expenditures reported for this purpose to September 30, 1899.

### CONSTRUCTION OF BUILDINGS AT POSTS IN ALASKA.

The posts at Fort Egbert and Fort Gibbon were partially constructed during the last year. The construction of new posts at Fort St. Michael, Cape Nome, and Port Valdez was commenced in the spring of 1900, lumber for the purpose being purchased at Seattle and Tacoma, Wash., and corrugated iron, hardware, etc., in the most advantageous markets and shipped to Alaska.

### FORT EGBERT, ALASKA.

At this post buildings for the accommodation of a company of infantry have been completed, consisting of a barrack, three officers' quarters, a hospital, a bakery, five storehouses, an administration building, a sawmill, a guardhouse, an ice house, and a barn. An additional storehouse, a stable, employees' quarters, and three noncommissioned officers' quarters were in course of construction at the close of the year. Total cost, $69,673.15.

### FORT GIBBON, ALASKA.

At this post one barrack, four officers' quarters, a hospital, three storehouses, a sawmill, a building for pilot, scout, etc., a bath house, and an ice house were completed on July 25, 1900. An additional barrack, four officers' quarters, an administration building, a bakery, and a guardhouse were under construction, to accommodate in all about two companies of infantry. Approximate cost, $63,545.30.

### FORT LISCUM (VALDEZ), ALASKA.

For this post there has been authorized two single and one double officers' quarters, one noncommissioned officers' quarters, a barrack building for 100 men, an adjutant's office, a guardhouse, an amusement room, a bath house, a hospital, three storehouses, a stable, a forage house and corral, a bakehouse, a shop building, an oil house, etc., costing $38,500.

### FORT DAVIS (CAPE NOME), ALASKA.

The construction authorized at this post consists of one single and three double officers' quarters, two barracks for 100 men each, an adjutant's office, a guardhouse, an amusement room, a bath house, a hospital, three storehouses, a stable, a forage house and corral, a bakehouse, a shop building, an oil house, etc., costing $57,000.

### FORT ST. MICHAEL, ALASKA.

At this post the construction of one single and three double officers' quarters, two barracks for 100 men each, an adjutant's office, a guardhouse, an amusement room, a bath house, a hospital, three storehouses, a stable, a forage house and corral, a bakehouse, a shop building, an oil house, etc., has been authorized; also an administration building, quarters for clerks, and quarters for other civilian employees in connection with department headquarters. Total cost, $62,463.

### SPECIAL PROJECTS IN ALASKA.

An expenditure of $49,975 was authorized for the construction of the road from Fort Valdez to Eagle City; $4,730 for two distilling plants; $3,125 for condensing plants and fire extinguishers, and $11,808.49 for other miscellaneous purposes.

### RESERVATIONS.

Under the act approved March 1, 1890, all the lots (25 in number) comprising the military reservation of old Fort Bliss, Tex., have finally been disposed of and the sum of $15,412 realized therefrom.

Ten lots still remain unsold of the grounds comprising old Fort Brady, Mich. These lots are in charge of the quartermaster at Fort Brady, to whom application for purchase can be made.

Under the authority of the Secretary of War of May 3, 1899, lots Nos. 145, 146, and 147 of the Tybee Beach Company's lands, fronting on the northwest 285 feet on the light-house road, on the northeast 166 feet on the proposed extension of Alger street, on the southeast 337 feet on the lands of Naylor, and on the southwest 295 feet on the right of way of the Tybee division of the Central of Georgia Railway, title to which was favorably reported on by the Attorney-General, were, on August 14, 1899, purchased at a cost of $400.

In order to control the water supply for Fort Columbia, Wash., the Secretary of War, on May 4, 1899, authorized the purchase of lots 1, 2, and 4 of the Willamette meridian, covering about 53 acres adjoining said reservation, from the Northern Pacific Railroad, which was accomplished at a cost of $212.60. In connection therewith, the President, on May 8, 1899, reserved for same purposes lot 9 of the Willamette meridian, Pacific County, covering about 33 acres.

## SEACOAST LANDS.

Under the acts of Congress approved July 1, 1898, and March 3, 1899, appropriating $150,000 for the purchase of suitable sites, the following purchases have, by authority of the Secretary of War, been made during the past fiscal year, after favorable opinion by the Attorney-General regarding title, viz:

| | |
|---|---|
| 15 acres at Long Island Head, Mass. (Fort Strong) | $18,541.41 |
| 111 acres at Delaware City, Del. (Fort Du Pont) | 10,000.00 |
| 120 acres at Northpoint, Md. (Fort Howard) | 25,114.28 |
| 23 acres at Portland Head, Me. (Fort Williams) | 50,000.00 |
| 5 acres at Fort Preble, Me | 10,000.00 |

Efforts are now being made to secure land at Fort Mott, Finns Point, N. J.; Hawkins Point, Md.; Sullivans Island, S. C., and Fort Constitution, N. H.

Under the act approved February 9, 1900, a tract of land in the city of Galveston, Tex., containing 60 acres, more or less, including a house of 10 rooms on the land and certain streets within the tract containing some 10 acres, vacated for the Government, was offered to the Government by the Galveston Land and Improvement Company for $126,000. This offer was accepted by the Secretary of War, and after favorable opinion on the title the purchase money was paid and deeds of transfer executed.

## REFRIGERATING PLANT AT MANILA.

The work in connection with this large plant, a description of which was given in my last annual report, after some unavoidable delays, is now well under way, and its completion is expected by February next. The entire expense of this plant is borne from the island funds.

Ice machines have also been provided the subsistence department at Iloilo, Jolo, and Cebu out of the Philippine Islands funds.

Three large and six small distilling plants, 300 Waterhouse-Forbes water sterilizers, 4 Smith cremators, 132 Pasteur, 82 Berkfeld, and 101 Maignen filters were provided for use of the troops serving in the Philippines.

## SUPPLY OF TROOPS IN THE MILITARY DEPARTMENTS IN THE UNITED STATES.

During the past fiscal year the troops serving at the various posts and stations in the eight military departments in the United States were promptly and fully supplied by this Department. The equipment of volunteer organizations, their encampment, and the movement of troops, animals, and property generally, together with the purchase of a large number of cavalry and artillery horses and other animals required for foreign service, increased to a considerable extent the labor of all the Department chief quartermasters.

At Vancouver Barracks, Wash., Department of the Columbia, three camps with hospital equipment were established for use of volunteer organizations recruited there. These camps were provided with water and sewer connections, which were connected with the post systems. After the departure of the volunteers the movable effects of the camps were stored, but with little effort camp accommodations could now be provided for a regiment of infantry.

At Fort Riley (Kans.) Military Reservation, Department of the Missouri, a large number of mules sent from Southern posts were grazed and recuperated for service in the Philippines.

The work of remodeling the old post-office building at Omaha, Nebr., for use as department headquarters has been completed, and the general offices of the department now occupy the same.

At Chicago, Ill., Department of the Lakes, extensive purchases of shoes and various other quartermaster supplies were made.

At the Presidio of San Francisco, Cal., Department of California, a model camp which will accommodate 5,000 men has been constructed for the accommodation of outgoing and incoming troops. The camp is provided with the necessary buildings, which are constructed of rough lumber, battened, with shingle roofs; the kitchens are provided with ranges and the dining room with stoves, tables, and benches; bath houses are provided with water heaters and boilers; the latrines are properly constructed and have water connections.

A similar camp to accommodate 2,000 men has been constructed at Angel Island, Cal., for use as a detention camp for returning volunteers with infectious or contagious diseases.

Four regimental camps have also been established at the Presidio. These camps were completed in September, 1899, and have been occupied more or less since completion. The structures erected have been built with a view to their permanency. The buildings, camp kitchens, etc., are of wood, with shingled roof and battened sides, and are solidly constructed. The latrines are equipped according to the system of closet trough adopted by the War Department. All tent floors are elevated, more or less, above the surface of the ground, according to its formation, and each tent is supplied with a heating stove.

The kitchens are equipped with cooking ranges, with hot and cold water, and each has a standpipe and slop hopper on the outside, properly sewered and trapped. On one side of each kitchen is a wash room, extending the entire length of the building, supplied with zinc-lined wooden trough, with faucets for washing purposes, etc., all sewered and trapped. The kitchens are each 24 by 32 feet, being built large enough to afford messing facilities in rainy weather. Each regimental camp has three bath houses, each equipped with six showers, with hot and cold water.

These camps, from a habitable and sanitary standpoint, including water and sewer system, are as perfect as it is possible to make them. Their capacity is approximately 6,500 men.

With a view to providing facilities for caring for and feeding the large number of horses and mules sent to the Presidio for shipment to the Philippines, a corral was constructed at the Presidio on the low ground below and east of the present cavalry stables. This corral is 500 by 250 feet, divided into separate stables, with roof, galvanized-iron feed boxes and watering troughs, and with sheltered accommodations for 1,000 animals.

## DEPARTMENT OF ALASKA.

Maj. G. S. Bingham, quartermaster, U. S. Volunteers (captain and assistant quartermaster, U. S. A.), was on February 9, 1900, assigned to duty as chief quartermaster, Department of Alaska. He reported at Seattle, Wash., on April 3, 1900, and assumed his duties in connection with the shipment of all necessary supplies from that port for Alaska, and the hire of the mechanics and other employees required. He left Seattle on the transport *Lawton* for Fort St. Michael, Alaska, on June 6, 1900, where he arrived on June 22, 1900.

The transports *Egbert*, *Rosecrans*, *Lawton*, *Seward*, and the chartered steamship *Athenian*, were dispatched from Seattle for Alaska at various dates between April and September, 1900, carrying 26 officers, 565 enlisted men, 291 civilian employees, 86 animals, 3,681,000 feet of lumber, and a full supply (about 2,310 tons) of building materials for construction of barracks and quarters, and the necessary clothing and equipage and other supplies for the use of the troops serving in the arctic region.

The dispatch boat *Seward* conveyed the department commander, Gen. G. M. Randall, with a detachment of troops, to St. Michael, and has since been in service in Alaskan waters. She will return to Seattle at the close of navigation.

The buildings completed and authorized for the several posts in the Department of Alaska up to the close of the last fiscal year have been previously referred to.

Two distilling plants of guaranteed capacity of 1,200 gallons every twenty-four hours have been sent for use of troops in Alaska.

Since the close of the fiscal year a steamship has been chartered and dispatched to Alaska with a supply of coal for use of the troops during the coming winter.

## GENERAL DEPOTS.

There are six general depots connected with this Department, viz: New York City, Col. A. S. Kimball, assistant quartermaster-general, U. S. A., in charge; Philadelphia, Pa., Col. John V. Furey, assistant quartermaster-general, U. S. A., in charge; St. Louis, Mo., Lieut. Col. D. D. Wheeler, deputy quartermaster-general, U. S. A., in charge; Jeffersonville, Ind., Lieut. Col. C. R. Barnett, deputy quartermaster-general, U. S. A., in charge; Washington, D. C., Maj. T. E. True, quartermaster, U. S. A., in charge; San Francisco, Cal., Maj. O. F.

Long, quartermaster, U. S. Volunteers (captain and assistant quartermaster, U. S. A.), in charge.

The enlarged Army has greatly increased the work required at these important depots. The purchases, manufactures, and issues thereat, and other work incident thereto, has reached very large proportions.

A considerable and important part of the work performed at the New York depot related to the purchase, inspection, and distribution to the Army of the khaki clothing.

At Jeffersonville depot a storage building, costing $14,200, is nearing completion, and when finished will greatly facilitate the storage of wagons and other property at that depot.

At the Philadelphia depot, which includes the Schuylkill Arsenal, an electric-light plant has been established, supplying light for all purposes in the buildings and grounds; also furnishes power to operate sewing machines for the manufacture of tents, barrack bags, etc., as well as for the machines for cutting out of all garments required for manufacture.

A building for inspecting all textile materials, as well as for sponging of all goods requiring such treatment, is now in course of construction and nearing completion, which, when finished, will greatly add to the expediting of this class of work.

The officers in charge of all these large and important depots have had extensive experience, and have performed the work committed to their care in a most satisfactory manner.

### TRANSPORTATION SERVICE AT TACOMA AND SEATTLE, WASH.

By reason of the large demands made upon this Department in supplying the troops in Alaska, Honolulu, the Philippines, and China, the quartermaster's establishment already existing at Seattle, under the charge of Capt. W. W. Robinson, jr., assistant quartermaster, U. S. A., now major and quartermaster, U. S. Volunteers, was made available for the purpose of chartering and fitting up transports, purchasing supplies, and assisting in other important work in connection with sailing of army transports from Puget Sound.

The facilities afforded at Seattle and Tacoma for the accomplishment of this work were utilized by this Department to the fullest extent consistent with the urgent requirements of the service. The Department also availed itself of the facilities afforded at Portland, Oreg.

During the fiscal year 1,608 troops, 620 civilians, 4,053 animals, 26,663 tons of cargo, and 7,671,000 feet of lumber were shipped on chartered and other army transports sailing from Puget Sound.

### CLOSING OF SAVANNAH DEPOT.

Lieut. Col. D. D. Wheeler, deputy quartermaster-general, U. S. A., was sent to Savannah, Ga., on July 1, 1899, to close the quartermaster's depot there and dispose of the property that had been accumulated there. In accomplishing this a large amount of surplus and condemned property, consisting of mules, horses, wagons, etc., were sold at public auction, from which the sum of $69,521.27 was realized. On October 12, 1899, this depot was discontinued.

### CLOSING OF CAMP MEADE, PA.

Work in relation to Camp Meade was completed on January 17, 1900, and the same discontinued.

### DEPOT AT CHICKAMAUGA PARK, GA.

Capt. Moses G. Zalinski, assistant quartermaster, U. S. A., is in charge of the quartermaster's office at Chickamauga Park, Ga. The work there during the fiscal year consisted largely of storage and shipment of quartermaster's supplies, mainly means of transportation.

This establishment has recently been largely reduced, and steps are now in progress looking to its early discontinuance.

### DEPOT AT SAINT ASAPH, VA.

This depot is located between this city and Alexandria, Va., about 6 miles from Washington and 2 miles from Alexandria, on the Mount Vernon Electric Railroad and the Southern Railway. It has been under charge of Capt. E. H. Parsons, assistant quartermaster, U. S. Volunteers, and been largely used during the past fiscal year as a depot to accommodate public animals, means of transportation, and other quartermaster supplies sent there from other points. A large number of animals have been rested and recuperated there, and means of transportation repaired, and then shipped to other places where needed.

This depot has now, to a great extent, served the purpose for which it was established. Considerable reduction in the expenses has recently been made there, and it is thought that very soon the expenses can be further reduced and probably its further use as a depot can be entirely dispensed with.

### DIVISION OF CUBA.

Lieut. Col. C. F. Humphrey, deputy quartermaster-general, U. S. A., was chief quartermaster of the Division of Cuba, at Habana, during the past fiscal year. He performed the important duties committed to him most satisfactorily.

That officer reports that the transportation of troops and supplies from and to Cuba during the past fiscal year has been confined almost exclusively to ships of the regular transport service; that the building and construction work remaining unfinished there at the close of the last fiscal year has been completed. Very little other work of this character was done during the past year, and the cost of such as has been done has been reimbursed the Quartermaster's Department from revenues of the island, or paid for directly from funds derived from that source.

The transfers and expenditures made through his office during the past fiscal year from the various appropriations pertaining to the Quarmaster's Department amount to $2,474,238.12.

The sum of $663,202.10 was reimbursed to the Quarmaster's Department during the year from insular funds on account of expenditures made from Quartermaster's appropriations for barracks and quarters, rents, water and sewer system, well boring, military railroad, etc.

The total disbursements from island funds from date of United States occupation in Cuba to June 30, 1900, made through his office, amounted to $1,257,696.20, which includes the sum of $174,499.15, which was expended on account of Military Hospital No. 1.

The total expenditures as above given does not include disbursements made for purchase of furniture and supplies for public schools of the island, which have been paid for by warrants on the treasurer of the island, on accounts prepared and certified by his office.

Colonel Humphrey in this connection reports that in addition to the regular duties of the Quartermaster's Department pertaining to his office, and aside from the disbursements of revenues of the island and the care of a large quantity of insular property, the handling of furniture and supplies for the public schools of the island has added greatly to its labors in every way.

That in response to advertisements issued by Headquarters, Division of Cuba, January 6, 1900, bids were opened February 15, 1900, by the chief quartermaster, Division of Cuba, for furnishing furniture and supplies for the public schools of the island of Cuba. The awards were made by a board of officers especially convened for that purpose.

On the bids thus received and awards made, contracts were entered into by the Chief Quartermaster with 14 different dealers and manufacturers for the following specified furniture and supplies, viz:

100,000 desks.
16,669 rear seats.
3,000 book cases.
2,000 teachers' desks.
3,000 chairs.
4,000 dozen erasers.
60,000 board strips.
3,000 maps.
1,500 hand bells.
3,000 clocks.
3,000 ink wells.

These supplies were ordered shipped to Habana, Matanzas, Sagua la Grande, Caibarien, Nuevitas, Gibara, Baracoa, Guantanamo, Santiago, Manzanillo, and Cienfuegos, Cuba, and from these ports distributed to 122 different muncipalities for which intended. The labor of receiving, inspecting, and reshipping to destination of this furniture involved unpacking for inspection and repacking for distribution by rail, water, and wagons, necessitating the handling of this enormous stock several times.

In the Department of Santiago and Puerto Principe and the Department of Matanzas and Santa Clara large shipments were also made, and in the former the work was greatly increased by the remoteness of the various municipalities from seaports and the almost total absence of inland transportation facilities. Government means of transportation was used at the various ports and municipalities whenever available.

The furniture and supplies when received were receipted for by the alcaldes of the various municipalities, who are to account for same to the civil authorities of the island, to whom such receipts are transmitted through the adjutant-general of the division.

The establishment of these schools with necessary equipment complete, in connection with the sending of about 1,300 school-teachers to the United States for practical tuition and observation, thus enlightening them on many subjects of which they might otherwise remain in ignorance, will result in a great permanent benefit to the people of the island of Cuba.

Colonel Humphrey's reports show that 4,336 persons and over 22,000 tons of supplies were transported to and from Habana during the year, and that $8,629,852.33 in funds were received and sent from

Habana in army transports. That these large shipments have been made safely and promptly he submits is evidence of the efficiency of the transport branch of the service, by which this work was accomplished.

That this service on the Atlantic and Pacific oceans should have grown to its present proportions and unquestioned efficiency in so short a time and under such circumstances of emergency in its commencement establishes the ability of the Quartermaster's Department to organize, equip, and operate this branch of the service with success.

### DEPARTMENT OF MATANZAS AND SANTA CLARA, NOW FORMING A PART OF THE DEPARTMENT OF WESTERN CUBA.

Maj. W. H. Miller, quartermaster, U. S. A., was chief quartermaster of this department. He reports that during the past fiscal year there has been no change in the general conditions; that the troops have been supplied promptly and well with all needed quartermasters' supplies; that the post of Hamilton Barracks, the construction of which was well advanced at the close of the previous fiscal year, has been completed. The post at Rowell Barracks, at the mouth of the harbor of Cienfuegos, has also been completed.

### DEPARTMENT OF HABANA AND PINAR DEL RIO, NOW FORMING A PART OF THE DEPARTMENT OF WESTERN CUBA.

Maj. George S. Cartwright, quartermaster, U. S. Volunteers, was chief quartermaster from May 31, 1900, until the close of the fiscal year.

He reports that the work of improving the posts throughout this department has been carried out under the direction of their respective quartermasters, acting under the direction of the different post commanders, upon allotments approved from department headquarters, and that the largest expenditure during the year under the quartermaster's department has been at Columbia Barracks, where a most complete post has been constructed. This work has been under the immediate direction of Capt. George L. Goodale, assistant quartermaster, U. S. Volunteers.

### DEPARTMENT OF SANTIAGO AND PUERTO PRINCIPE, NOW DEPARTMENT OF EASTERN CUBA.

Capt. Charles M. Augur, assistant quartermaster, U. S. Volunteers, was acting chief quartermaster of this department from July 1 to November 22, 1899. After the latter date Maj. J. B. Aleshire, quartermaster, U. S. Volunteers, assumed the duty of chief quartermaster of this department.

By reason of a yellow fever epidemic it became necessary on July 10 and 12, 1899, to remove the quartermaster's establishment, along with the other military offices, from Santiago to Cristo, some 12 miles northeast of the former city. This move, however, did not materially delay the supply of all needful quartermaster stores to the troops serving in the department. On October 24, 1899, the offices of the chief and depot quartermasters returned to Santiago.

The quartermaster's depot at Gibara was abandoned January 9, 1900, and the depot at Nuevitas was in course of abandonment at the close of the fiscal year.

During the year the troops in this department have been satisfactorily supplied.

The wagon and mule transportation in the department, with few exceptions, are reported by the chief quartermaster to be in good condition.

The fuel used consists of wood, charcoal, and bituminous and anthracite coal. The coal is received from the States. The price of wood in this department ranges from $3 to $8 per cord. Native wood is stated to be cheaper and more satisfactory for use in Cuba than wood received from the United States.

The troops in this department are quartered in old Spanish barracks or other public buildings. The officers are quartered generally in rented buildings. The offices are, as a rule, located in Spanish buildings. Storehouses, with few exceptions, are rented. Hospitals are in old Spanish hospitals or barracks. With few exceptions the barracks occupied by the troops are large and roomy, and make excellent and satisfactory quarters.

### DEPARTMENT OF PORTO RICO.

Maj. John L. Clem, quartermaster, U. S. A., is chief quartermaster of this department. He was assisted during the fiscal year by Maj. Thomas Cruse, quartermaster, U. S. Volunteers, and Capt. W. C. R. Colquhoun, assistant quartermaster, U. S. Volunteers.

It is shown from the reports of these officers that the work pertaining to the quartermaster's department in Porto Rico has been promptly and satisfactorily performed during the past fiscal year.

The terrible hurricane that visited the island on August 8, 1899, swept away vast amounts of property, making it necessary to promptly equip wagon and pack trains to supply the troops at outlying stations, and, besides, the quartermaster's department was intrusted with the duty of delivering relief supplies to the destitute in all parts of the island. The freighting of food to the interior towns was a work of great magnitude.

At a number of the posts in the island building operations had been begun and had almost been completed when they were wrecked by the hurricane. The work of reconstruction was at once commenced and new modern buildings erected for the accommodation of the troops, so that at the close of the fiscal year the marks of the destruction by the hurricane at the said posts were practically obliterated.

All the buildings used by the military authorities at San Juan were thoroughly overhauled and necessary repairs made.

Owing to the change from the military to the civil government on May 1, 1900, it became necessary to move the military headquarters from the palace. The properties at Nos. 3 and 5 Fortaleza street, together with the old military arsenal in the rear, were selected, and they were soon conformed to meet all requirements, and, on April 30, 1900, the department headquarters moved in, leaving the palace for the new civil government inaugurated the following day.

The posts at Arecibo, Adjuntas, and San German have been abandoned, and to this extent has lessened the work of the quartermaster's department.

During the year the two quartermaster's offices at Ponce were consolidated, resulting in considerable saving of expense.

The total amount of freight received at San Juan during the fiscal year amounted to 76,000,000 pounds, of which about 32,000,000 pounds consisted of relief supplies, which were distributed under the direction of Major Cruse to every part of the island by boat, rail, wagon, and pack trains. This work of distribution of relief supplies was begun on August 16, 1899, and continued until June 28, 1900. The amount expended from quartermaster's appropriations in connection with the distribution of the relief supplies, Major Clem states, amounted to $62.326.41.

### HONOLULU.

Maj. George Ruhlen, quartermaster, U. S. A., was the officer of this department who was charged with the duties pertaining to the quartermaster's department at Honolulu, which were administered by him most efficiently.

That officer reports that two batteries of the Sixth U. S. Artillery now constitute the garrison of United States troops at Honolulu. They are located in quarters on a small tract of leased ground at a place called Camp McKinley, 4½ miles from the business center of Honolulu, but within the municipal limits of that city. No definite action looking to the selection of a permanent site for a military post or garrison in the Hawaiian Islands has yet been taken.

He states that troops in garrison or in camp or cantonments of a permanent character in the Hawaiian Islands should, for comfort as well as for reasons of economy, be sheltered in frame buildings rather than under canvas, the climate, especially along the seashore, being very detrimental to canvas. The same applies to the shelter for stores and property.

Major Ruhlen also states that building operations, during the past fiscal year, were confined to the erection of stables, sheds, corrals, and other structures incident to providing accommodations for public animals en route from the United States to the Philippines. A tract of 53 acres of unimproved ground, about 2½ miles from the water front, was leased and the necessary buildings erected thereon for the accommodation of said animals. The place is well adapted for the purpose and is the nearest available ground to the place of discharging and loading the animals that could be secured.

He reports that his attention has frequently been called by officers in charge of troops on transports stopping there to the limited facilities, or rather total absence of facilities, for recreation, rest, and exercise on shore of their men while in the harbor of Honolulu, under conditions which would admit of removing the men from the ship, except for meals, so that bedding could be taken out, cleaned, and aired, and the compartments of the holds or decks occupied by men at night thoroughly washed, ventilated, and dried. There are no public grounds or vacant lots where even a company can be formed, and the only places available for such purposes are the narrow streets of the city, where there is always more or less interference with traffic. Various measures for providing means of recreation, shelter, and bathing facilities for men on transports have been suggested to him by officers who appreciate the necessity and have knowledge from personal observation and experience of the lack of them there.

Major Ruhlen thinks that the only proper remedy is the erection of a large building on the so-called "Barracks lot," situated near the center of the city of Honolulu, not more than half a mile from the water front, and reserved by the President for military uses. This building should be liberally equipped with plunge and shower baths and sanitary facilities, and appliances for athletic exercises, and have sufficient floor space in its basement and first and second floors to afford sleeping room for the number of men stated. When not used by men from transports it could be utilized by Territorial military organizations as an armory and drill hall, and would also serve as a place of assembly and temporary shelter for troops called into service there under any emergency that may arise. Provision could also be made in the building, or in connection with it, for administrative offices and storehouses for all supply departments of the Army, thus doing away with all the places now held for such purposes under leases and at high rates of rent.

On December 12, 1899, several cases of the bubonic plague were discovered among the Asiatic population of Honolulu, and other cases occurred at intervals until March 30, 1900, but no person connected with the military service was taken with the disease nor exposed to infection necessitating individual quarantine. The only direct effect of the plague upon the military service was the quarantine restrictions which prevented for a time the free use of Honolulu as a port by the transport service.

### PHILIPPINE ISLANDS.

Maj. C. P. Miller, quartermaster, U. S. A., is chief quartermaster, Division of the Philippines, and has performed his duties in the most satisfactory manner.

Maj. Robert R. Stevens, quartermaster, U. S. Volunteers (captain and assistant quartermaster, U. S. A.), is chief quartermaster, Department of Northern Luzon; Maj. Isaac W. Littell, quartermaster, U. S. Volunteers (captain and assistant quartermaster, U. S. A.), is chief quartermaster, Department of Southern Luzon, and Maj. John T. Knight, quartermaster, U. S. Volunteers (captain and assistant quartermaster, U. S. A.), depot quartermaster at Manila.

In addition to the foregoing officers there are now twenty other (regular and volunteer) officers of this department on duty in the Philippines assisting in the important work of the quartermaster's department in those islands.

Major Miller states that upon the regular officers of the department has fallen the important duties of chief quartermaster of the larger departments, depot at Manila, and in charge of water transportation, where experience and knowledge of the general work of the department is necessary. Much of the work, however, has been done by the volunteer quartermasters, and with rare exceptions they have rendered fine service. Two are chief quartermasters of departments, many others chief quartermasters of districts, and one is assistant to chief quartermaster of the division. That they are satisfactorily filling their places proves their value.

The chief quartermaster states that the Army, on August 31, 1899, had possession of the country in the vicinity of Manila; on the railroad north to Angeles, with the railroad repaired and in use to San

Fernando; on Laguna de Bay to Calamba, and from Bacoor to Imus. In the southern islands there were garrisons at Iloilo, Cebu, Jolo, and small garrisons on some of the small islands in the vicinity of Jolo.

The rapid advance of the Army, the establishment of new posts, and the supply of these posts has made the work of the supply department, with the limited means at hand, one of great difficulty. This can be better understood when it is considered that this expansion has been from a few posts near the base of supply to over 350, many of them situated at remote and almost inaccessible points. The establishment of sub-depots for the different districts and regular guarded trains of supplies from the sub-depots to the outlying posts have been a necessity.

A large number (in fact all that have been asked for) of mules, wagons, and cavalry horses have been shipped in from the United States, until now the command is fairly well supplied with transportation and cavalry horses. More will be required from time to time to meet losses and supply additional posts as they are necessarily established.

The depot at Manila has grown to meet the demands for the supply of over 60,000 men. When it is considered that all of the supplies for this large force have to pass through the depot at Manila; that all of the vessels bringing supplies there have to anchor 2 miles or more from the depot; that at times as many as 19,000,000 pounds have to be unloaded in two weeks, a million pounds a day a fair average, it will be appreciated what the work is. It requires a large force of men and a large number of steam launches and lighters to do the work, supplemented by cascoes and lorchas. It is necessary for the Government to own its launches and lighters and, as rapidly as possible, they have been purchased and the number of hired cascoes and lorchas correspondingly reduced.

A system has been adopted of organizing depots of supplies for the Departments of Northern and Southern Luzon, to which all supplies will be issued in bulk from the main depot and to which all requisitions will be sent for supply after approval at the headquarters of the department. This will relieve, to some extent, the excessive work at the central depot and result in more prompt supply to the troops of the stores required.

## CHINESE LITTER BEARERS.

Four Chinese litter bearers for each company were allowed. During action these men were of great use in carrying off the dead and wounded and in bringing up ammunition, and, considering their class and small pay, showed commendable courage in their work. While they would hug the ground and shake with fear during an action, when ordered forward for work which they recognized as theirs with rare exceptions they were up and off intent upon their duties, their fear forgotten. When the active campaigning with large bodies of troops was over, it was deemed expedient to dispense with their services.

## NATIVE PONIES.

These are small horses capable of doing a great deal of work when used with care. They have been used largely for messenger service and for hauling company rations in a small light cart with springs.

They have been used also to some extent for scouting. The necessity for their use in the army and their limited supply has raised their value from $25 to $100 Mexican, or more.

### CARABAOS.

The carabao has been of great service to the army in the Philippines, but he is slow and tries the patience of a commander when celerity of movement is necessary for success. Five miles a day on a fair road is all that can be expected, and 2 miles has been the maximum over some of the roads during or after a rain. In dry weather great care has to be used to throw water over them frequently or they will not live. Their most successful work was done when hitched up tandem under General Lawton in his campaign north, and under General MacArthur when advancing up the railroad, in hauling supplies between breaks in the roads. During the past few months they have been attacked by rinderpest, which has killed large numbers of them. Fortunately the mule transportation has now largely taken the place of the carabao, and the army has not felt seriously the loss of this animal.

### WATER TRANSPORTATION.

The question of water transportation in the harbors at the large number of posts occupied has been a difficult one. As there is rarely sufficient depth of water for the vessels to go within a mile of the docks, some means had to be provided for transporting the stores to land. Launches have been provided for the most important harbors; at others two bancas have been fastened together, upon which is built a platform for the stores. Large rowboats have been contracted for in Hongkong, and the delivery will soon commence. These will be supplied the smaller posts on the coast.

For a time, owing to the closed ports, the department was able to secure inter-island steamers of from 150 to 600 tons capacity at a reasonable cost. The owners had little use for them and were glad to charter them to the Government for almost any price. When the ports were opened, all of the boats were required at once and the owners could get almost any price for them, and there was then considerable difficulty in keeping the posts supplied. It was done, however, by keeping some of the vessels as a military necessity and by shipping stores on commercial liners on the return trip of the vessels to hemp ports and by use of the *Pennsylvania* and *Indiana* as supply ships. Freight charges on commercial lines are very high, but it is the policy to use them when reasonable rates can be obtained.

### CLOTHING.

Major Miller reports that the khaki now received from the United States wears well, holds its color, and gives general satisfaction; that the Hongkong clothing is made of good English khaki, holds its color, and wears well, but it is not made up in as good shape as that received from the United States.

### HORSES AND MULES.

It has been a source of great satisfaction to find that horses and mules brought to the Philippines from the United States so soon become acclimated and keep in good condition. Even without American forage, rice straw, unhulled rice, and native grass makes a good substitute and keeps the animals in good flesh. A few are lost by sunstroke and quite a number from glanders, but where care is used not to overwork the animals in the middle of the day there is very little loss from heat.

### RAIL TRANSPORTATION.

The railroad extending from Manila to Dagupan came into the hands of the quartermaster's department as the country north was cleared of insurgents. Many of the rails had been taken up and buried, the ties burned, streams of water diverted to the roadbed to wash out the earth and make portions of it a running stream, the engines run together at full speed or dumped into a convenient river, and the bridges partially or wholly destroyed. This was the situation upon some portions of the road, but upon other parts the insurgents were driven back too rapidly to give them the opportunity to do more than temporary injury. Under the able management of Maj. C. A. Devol, the depot quartermaster, ties were purchased in large quantities in Japan; rails, etc., from the United States; engines raised from the beds of the streams and repaired; rails dug up that had been buried, and the roadbed and railroad repaired in time to keep the army north supplied. The work was subsequently turned over to Captain Sibert, Engineer Corps, who handled the road and repairs with good judgment and displayed in its management fine executive ability. When the country along the road settled down and there was a demand for cars for shipping in rice and other products, the road was turned over to Mr. Higgins, its original manager.

### EXPENDITURES.

Major Miller reports the following expenditures during the fiscal year from Philippine funds, exclusive of expenditures made in departments of the Visayas, Mindanao, and Jolo, which will be forwarded later, viz:

| | |
|---|---|
| Construction, Department of Northern Luzon | $21,442.50 |
| Repairs, Department of Northern Luzon | 21,813.90 |
| Construction, Department of Southern Luzon | 11,140.27 |
| Repairs, Department of Southern Luzon | 4,621.78 |
| Rents, Department of Northern Luzon | 6,332.78 |
| Rents, Department of Southern Luzon | 11,397.38 |
| Rents, paid by chief quartermaster of division | 334,922.73 |
| Construction and repairs, miscellaneous | 420,343.99 |
| Structural, water supply | 2,500.00 |
| Sewerage | 64,643.50 |
| Plumbing | 5,389.70 |
| Heating and lighting | 308,373.60 |
| Railway construction | 269,129.31 |
| Refrigerating and ice-making plant | 582,234.64 |
| Total (Mexican) | 2,064,286.08 |
| Army transport service (at Manila and Nagasaki) (gold) | 2,247,595.42 |

The chief quartermaster states that the work of his office has included internal improvements and repairs, the equipment of the collectors and captains of ports and other civil officers as the various ports have been opened for trade, the extent of which can be judged by the expenditures of public civil funds from the 1st of September, 1899, to August 7, 1900, of $5,969,375.57 Mexican.

Accompanying Major Miller's report are the separate reports of the chief quartermasters of the Departments of Northern and Southern Luzon and the depot quartermaster at Manila. These reports give in detail the operations of the Quartermaster's Department in connection with supply of the Army in the field, and show that the work of the Quartermaster's Department in providing for the needs of the Army serving in the archipelago during the past fiscal year reached enormous proportions, requiring the most exacting service on the part of the officers charged with these important and responsible duties. That the work has been efficiently done is evidenced by what has been successfully accomplished under the most trying and adverse conditions. The difficulties attending this service can not be fully appreciated without being understood.

It is further shown by the records that an expenditure of $510,960.82 was made during the fiscal year for the purchase in the States of materials, tools, etc., for construction of buildings, roads, water and sewer systems, and refrigerating plant, and their shipment to Manila. Of this amount, the sum of $255,186.47 was paid from the revenues of the Philippine Islands and the remainder from the appropriations of the Quartermaster's Department.

### SHELTER FOR TROOPS IN PHILIPPINES.

In Manila and throughout the Philippines, where our troops are garrisoned, they are sheltered in old Spanish barracks and other buildings taken possession of or rented. When these are not obtainable, tents are used or temporary Nipa structures are erected.

### DEPOT AT NAGASAKI, JAPAN.

Maj. John McE. Hyde, quartermaster, U. S. A., is depot quartermaster at this station.

This officer has promptly attended to all the quartermaster's business required to be performed at Nagasaki, including the supply of coal and water for our transports touching at that port.

### SUPPLIES FOR TROOPS IN CHINA.

As soon as it was determined to send our military forces into China with a view to rescuing our legationers at Pekin, steps were immediately taken to establish a quartermaster's depot at Taku, China, where an ample supply of the various articles of clothing and equipage and other quartermaster supplies, including hospital and other tents, means of transportation, etc., were promptly shipped for use of our troops while serving there. Capt. J. C. Byron, assistant quartermaster, U. S. A., now major and quartermaster, U. S. Volunteers, was at once dispatched from Manila to Taku to take charge of the preliminary work.

The climate of certain parts of China being very cold in winter, special precautions were taken to provide an adequate supply of extra warm clothing and heating stoves for use of such of our troops as might be required to remain there during the winter. Considering that the regulation conical tent stoves are adapted only to burning wood, and owing to the reported scarcity of this class of fuel in the country referred to, this office devised a cast-iron fire pot and grate suitable for soft coal to be placed inside of the conical tent stove. Experiments with Japanese coal demonstrated that the same answered the purpose fully. A supply of these pots have been procured and ordered to be shipped, and it is believed they will in the future prove a valuable adjunct to the equipment of the Army.

There has also been sent to China for use of the troops serving there 50 Waterhouse-Forbes water sterilizers, also 6 small distilling plants of 600 gallons capacity each twenty-four hours, also a large distilling plant of 3,800 gallons per day capacity, with the various spare parts, which, if not required there, will be sent to the Philippines.

Lieut. Col. C. F. Humphrey, deputy quartermaster-general, U. S. A., is now on duty in China as chief quartermaster of our forces serving there, and has to assist him in the performance of the quartermaster's duties six other officers of the Department. In the event of a reduction of our military forces in China, the surplus quartermasters now on duty there will be sent to the Philippines.

## NATIONAL CEMETERIES.

There are eighty-three national cemeteries.

During the past fiscal year there were 2,244 interments in these cemeteries, making a grand total of 342,242 interments therein to June 30, 1900.

Six thousand nine hundred and thirty three white marble headstones were provided during the fiscal year to mark the graves of known Union soldiers and marines in national and other cemeteries.

Under the act approved March 3, 1899, the sum of $999.78 was expended for repair and preservation of the monuments, tablets, observation tower, roads, fences, etc., made and constructed by the United States upon public land within the limits of the Antietam battlefield, near Sharpsburg, Md.

For the repair to roadways to national cemeteries, which have been previously constructed by special authority of Congress, there was expended during the fiscal year the sum of $9,392.09.

The work of improving the roadways, etc., from Pensacola, Fla., and Natchez, Miss., to the national cemeteries near those places, as authorized by special act of Congress, was completed during the past fiscal year.

Four captured guns were placed in the Arlington National Cemetery to ornament the section in which the remains of soldiers of the war with Spain, returned from Cuba and Porto Rico, have been interred, and two howitzers and a large anchor in the section in which the remains of 165 sailors and marines, victims of the disaster to the battle ship *Maine*, in the harbor of Habana, Cuba, February 15, 1898, are interred, the latter having been buried in this cemetery in December, 1899, with appropriate ceremonies.

At all the national cemeteries the necessary improvements and repairs have been made, and the grounds kept in neat and proper order.

At the Quincy, Ill., cemetery the remains of the 287 soldiers buried in Woodland Cemetery were removed and reinterred in a plat of ground set apart for that purpose in Graceland Cemetery, near that city. Under an agreement with the Graceland Cemetery Association, the soldiers' graves are to be cared for and protected hereafter without expense to the Government.

## OPERATIONS OF THE BURIAL CORPS IN THE PHILIPPINES.

Mr. D. H. Rhodes, a trusted and most efficient employee of this Department, was placed in charge of burial corps which was organized for the purpose of going to the Philippines to disinter and ship to the United States the remains of officers, enlisted men, and others connected with the military service who had been killed in action or died of disease and were buried there.

Mr. Rhodes, with his corps of nine assistants, left Washington on October 12, 1899. After their arrival at San Francisco, Cal., six additional assistants were added to the corps, and a suitable casket selected and adopted for use in the Philippines. The entire burial corps sailed from San Francisco on October 26, 1899, and arrived at Honolulu on November 3. For cogent reasons it was determined to defer the disinterment of the 36 soldiers still remaining there until the return of the burial corps from Manila. This, however, was not accomplished on account of the bubonic plague prevailing at Honolulu when the corps returned home. The burial corps sailed from Honolulu November 4 and arrived at Manila November 22, 1899, and at once set on foot the necessary preliminary arrangements to commence work.

On December 11, 1899, active operations were begun at the Paco Cemetery, and after completing the work there disinterments were made at Battery Knoll and Malate Cemetery, finishing at the latter place on January 19, 1900. This completed the work in the immediate vicinity of Manila.

The corps then continued operations at outside points in various parts of Luzon—made disinterments at Camp Dewey Cemetery, the convent inclosure at Maricaban, and at Corregidor Island. Isolated bodies were disinterred at Cavite and other points, including hospital cemetery at San Roque.

After completing the work of disinterments north of Manila, which was accomplished March 3, 1900, the corps then took up their work in the southern islands.

On April 3, 1900, the corps sailed from Manila and arrived at Iloilo, island of Panay, April 6, and immediately proceeded with disinterring at Iloilo, island of Panay; Bacalod, San Enrique, and La Carlota, Negros Island, and at various other scattered points. Cebu was then visited and disinterments made there. From Cebu the corps went to Zamboanga, island of Mindanao, thence to Jolo, Sulu Island, and from thence to Bongao, making disinterments at these places, which completed the work in the southern islands. The corps then returned to Manila on April 29, 1900.

Having finished their work, the burial corps, in charge of Mr. Rhodes, left Manila on the transport *Grant* on May 15; arrived at San

Francisco Quarantine Station on June 9, and reached Washington, D. C., June 19, 1900.

A total of 1,073 bodies were disinterred by the burial corps in the Philippines, of which only 15 bodies are reported as "unknown."

Mr. Rhodes submits with his report a series of 43 maps and sketches, showing location of cemeteries, burial plots, and graves from which the disinterments in the Philippine Islands were made, together with a reference list for same. Also a summary of all the disinterments made, classified by organizations to which the deceased soldiers belonged, and the towns and places visited, showing the number of disinterments made at each place.

A list of 92 names of those who died of smallpox, or cause of death unknown, whose remains were not exhumed, by orders from the chief quartermaster at Manila, and are in Paco Cemetery, Manila, is also furnished.

### OPERATIONS OF THE BURIAL CORPS IN CUBA AND PORTO RICO.

Mr. Solon F. Massey was specially selected and placed in charge of the burial corps sent to Cuba and Porto Rico, he having heretofore established his fitness for the work.

This corps was organized December, 1899, and on the 30th of that month Mr. Massey with 15 assistants sailed from New York City on the transport *Burnside* for Habana, Cuba. On January 9, 1900, the work of disinterment at Camp Columbia, in Habana, was commenced, and was pursued at various places in all parts of the island until finally completed by the close of February, 1900. Mr. Massey, after closing up various matters pertaining to the work, returned to Washington, D. C., March 31, 1900.

The number of remains disinterred in Cuba by Mr. Massey's corps was 414.

Mr. C. E. Norton, assistant to Mr. Massey, sailed from New York to Porto Rico on January 2, 1900, with two assistants. This party visited various places in Porto Rico, disinterring 36 remains, which were shipped to New York City.

Mr. Massey submits with his report the following papers:

Complete list giving name, rank, company, regiment, and date of death of all persons whose remains were exhumed by the burial corps of 1900, said lists also showing the places where each remains were disinterred and the date of the work.

A list showing the remains arranged according to the organizations to which the persons belonged. The Regular Army and Navy under one heading and the volunteers under another, also the civilians by themselves.

A list by military departments, giving the number of remains removed from each point visited, the date of the work and the seaport from which the various shipments to the States were made.

A list showing the work accomplished by the burial corps in Porto Rico, giving the remains removed by said party.

From all reports received at this office, it is shown that a total of 1,889 bodies of officers, enlisted men, and others were returned to the United States during the past fiscal year, as follows:

| | |
|---|---|
| From Cuba, including 72 yellow-fever cases stored at Santiago last year | 493 |
| From Porto Rico | 37 |
| From Honolulu | 2 |
| From the Philippine Islands (which includes 284 embalmed bodies that were not interred in the Philippines) | 1,357 |
| Total | 1,889 |

Of the above, 984 were returned to relatives and friends; 487 were interred in the presidio of San Francisco National Cemetery; 320 in the Arlington National Cemetery, and 1 in the Cypress Hills National Cemetery; 9 were remains of navy men and were turned over to the Navy Department, and 88 remained at San Francisco, Cal., on June 30, 1900, to be disposed of.

Messrs. Rhodes and Massey, with their assistants, have performed a most delicate and important work in the disinterment and return from the Philippines, Cuba, and Porto Rico of the nation's dead. I take great pleasure in commending them for their valuable services, which they have performed in a most thorough and satisfactory manner.

The officers of this department appreciate the sacred duty of returning to their homes and friends from distant lands the remains of those who gave up their lives in defense of their country, and have endeavored to conduct this duty with every mark of respect to the dead.

## PERSONNEL, QUARTERMASTER'S DEPARTMENT.

The number of officers provided by law for the Quartermaster's Department is as follows:

Regular Establishment:
- 1 Quartermaster-General, with the rank of brigadier-general.
- 4 assistant quartermasters-general, with the rank of colonel.
- 8 deputy quartermasters-general, with the rank of lieutenant-colonel.
- 14 quartermasters, with the rank of major.
- 30 assistant quartermasters, with the rank of captain.
- 1 military storekeeper, with the rank of captain.

Volunteers:
- 30 quartermasters, with the rank of major.
- 40 assistant quartermasters, with the rank of captain.

Under existing law, the term of service of the volunteer officers above referred to expires on July 1, 1901.

During the past fiscal year this department has suffered the loss of two of its energetic and efficient officers. Maj. Guy Howard, quartermaster, U. S. Volunteers (captain and assistant quartermaster, U. S. A.), was killed by the insurgents in the Philippine Islands on October 22, 1899, while in the discharge of his duties. His remains were brought home and laid at rest with appropriate military honors. On January 16, 1900, Maj. John W. Summerhayes, quartermaster, U. S. A., was retired from active service.

Since the close of the fiscal year Col. J. G. C. Lee, assistant quartermaster-general, U. S. A., one of the most experienced and efficient officers of the Department, was transferred to the retired list on account of age.

On September 23, 1900, Maj. George S. Cartwright, quartermaster, U. S. Volunteers, died at Habana, Cuba, of yellow fever. This officer, though young in the service of this Department, had shown himself to be a capable and valuable officer.

## POST QUARTERMASTER-SERGEANTS.

The 105 post quartermaster-sergeants provided by existing law are not sufficient to meet the requirements of the service. Many requests for the services of such sergeants had to be denied by reason of the limited number available. I therefore renew my recommendation of last year that Congress be requested at its next session to provide 150 of these sergeants.

### DETACHMENT ARMY-SERVICE MEN, QUARTERMASTER'S DEPARTMENT, WEST POINT.

This detachment during the past year consisted of 141 men, and was composed of mechanics, laborers, teamsters, and others. It is reported by the commanding officer that the members of this detachment performed their respective duties during the year satisfactorily.

### CIVILIAN EMPLOYEES.

This subject of civilian employees was given most thorough consideration during the past year and such reductions made as to bring the number within the actual requirements of the service. Great care was exercised in selecting from the war-emergency clerks and others holding temporary positions in the Quartermaster's Department at large those to be retained in service and classified under the President's amendment of May 29, 1899, of the civil-service rules. The most efficient and best qualified of these employees, as shown by their two or more years of temporary service, were listed for retention and classification. This list, containing the names of 298 persons, was submitted to the honorable the Secretary of War and was approved by him on June 1, 1900, and later transmitted to the Civil Service Commission. These employees, therefore, were on that date added to the classified force of this Department and made subject to the same civil-service rules as govern the other classified employees of the Quartermaster's Department at large.

### CONCLUSION.

The past fiscal year, like the two preceding ones, has been a period of great activity in the Quartermaster's Department. The responsible and important duties devolving upon it in transporting troops, animals, and all military stores by land and sea, and in furnishing the Army at home and at distant stations with the many quartermaster supplies required, have exacted the most earnest effort on the part of all who have been charged with the work.

In the administration of the affairs of this important supply department during the past year the Quartermaster-General has had the faithful and zealous cooperation of his subordinates in general, and it is a pleasure to him to here record his acknowledgment of the intelligent and valuable service rendered by the efficient officers (regulars and volunteers) and employees of the Department.

The officers on duty as assistants in this office during all the fiscal year were as follows: Majors Bird, Patten, Martin, Hodgson, and Schreiner, and Captain Dare. These officers have rendered most valuable assistance in the transaction of the business of this office.

It is sincerely hoped that Congress at its coming session will provide for an enlargement of the permanent establishment for this Department, in order that its organization may be fixed upon a satisfactory basis before the expiration of the service of the volunteer officers on June 30, 1901.

The enactment of a law imposing no expense on the United States, making provision for the classified civilian employees who have rendered long and faithful service to the Government, and who have been disabled for duty, would, I believe, increase the efficiency of the service. It is thought that House bill No. 15, first session, Fifty-sixth Congress, with proper modifications, would meet the requirements.

Respectfully submitted.

M. I. LUDINGTON,
*Quartermaster-General, U. S. A.*

The SECRETARY OF WAR.

## List of Papers Accompanying Annual Report of the Quartermaster-General Fiscal Year ending June 30, 1900.

1. Annual report of Maj. Charles Bird, quartermaster, U. S. A., for fiscal year ending June 30, 1900.
2. Annual report of Maj. William S. Patten, quartermaster, U. S. A., for fiscal year ending June 30, 1900.
3. Annual report of Maj. M. C. Martin, quartermaster, U. S. Volunteers (captain and assistant quartermaster, U. S. A.), for fiscal year ending June 30, 1900.
4. Annual report of Maj. F. G. Hodgson, quartermaster, U. S. Volunteers (captain and assistant quartermaster, U. S. A.), for fiscal year ending June 30, 1900.
5. Annual report of Maj. F. M. Schreiner, quartermaster, U. S. Volunteers, for fiscal year ending June 30, 1900.
6. Annual report of Capt. J. Z. Dare, assistant quartermaster, U. S. Volunteers, for fiscal year ending June 30, 1900.

# APPENDIX.

War Department,
Quartermaster-General's Office,
*Washington, October 12, 1900.*

General: I have the honor to submit herewith the following report of the operations of the transportation division of this office during the fiscal year ended June 30, 1900.

The following statement shows that during the fiscal year ended June 30, 1900, transportation was furnished, exclusive of transport service, for 747,399 persons, 18,455 animals, and 328,801 tons of material:

| | Railroad. | Water. | Wagon. | Stage. | Government vessel.[1] | Total. |
|---|---|---|---|---|---|---|
| Passengers: | | | | | | |
| Officers | 2,947 | 134 | 2 | 6 | 30,770 | 33,859 |
| Men | 94,600 | 5,787 | 220 | 346 | 612,587 | 713,540 |
| Total | 97,547 | 5,921 | 222 | 352 | 643,357 | 747,399 |
| Animals: | | | | | | |
| Horses | 7,619 | 1,274 | | | 657 | 9,550 |
| Mules | 6,615 | 758 | | | 1,532 | 8,905 |
| Total | 14,234 | 2,032 | | | 2,189 | 18,455 |
| Stores: | | | | | | |
| Subsistence ... tons | 31,110 | 13,564 | 6,466 | | 8,469 | 59,609 |
| Quartermaster ... do | 50,336 | 17,375 | 32,540 | | 9,883 | 110,134 |
| Ordnance ... do | 38,515 | 8,737 | 2,934 | | 2,456 | 52,642 |
| Medical ... do | 1,009 | 989 | 634 | | 232 | 2,864 |
| Signal ... do | 1,352 | 1,003 | 245 | | 223 | 2,823 |
| Miscellaneous ... do | 22,329 | 1,135 | 65,616 | | 11,649 | 100,729 |
| Total | 144,651 | 42,803 | 108,435 | | 32,912 | 328,801 |

---

[1] This includes all passengers carried on Government ferryboats plying between military posts and adjacent cities.

## ACCOUNTS AND CLAIMS FOR TRANSPORTATION.

The records show that 4,938 accounts and claims for transportation, amounting to $529,603.96, have been received at this office, examined, and transmitted for settlement during the fiscal year ended June 30, 1900.

Of these, 1,852 accounts, amounting to $389,667.61, were chargeable to appropriations of the War Department for the several fiscal years in which the service was rendered; 3,086 accounts of other Departments, amounting to $139,936.35, exclusive of bond-aided service and telegraph accounts.

*Bond-aided Pacific Railroad companies.*

| | Passengers. | Animals. | Freight. |
|---|---|---|---|
| | | | *Pounds.* |
| Southern Pacific Co. and Central Pacific R. R. Co | 31,921 | 5,226 | 83,692,647 |
| Sioux City and Pacific R. R. Co | 381 | 69 | 1,777,471 |
| Missouri Pacific R. R. Co. (central branch Union Pacific) | 25 | | 595 |
| Total | 32,327 | 5,295 | 85,470,713 |

There were 1,108 accounts for bond-aided service received at this office, amounting to $476,372.18. Of these, 823 accounts were chargeable to appropriations of the War Department, amounting to $440,172.43, and 285 accounts for other Departments, amounting to $36,199.75, as shown by the following table:

| | Number of accounts. | Amount. | Subsidized. | Unsubsidized. | Remarks. |
|---|---|---|---|---|---|
| Southern Pacific Co | 556 | $438,745.90 | $307,427.37 | $131,318.53 | War Department. |
| Do | 267 | 36,175.48 | 27,997.89 | 8,177.59 | Other Departments. |
| Sioux City and Pacific Co | 267 | 1,426.53 | 1,246.80 | 179.73 | War Department. |
| Do | 18 | 24.27 | 20.79 | 3.48 | Other Departments. |
| Total | 1,108 | 476,372.18 | 336,692.85 | 139,679.33 | |

### TELEGRAPH ACCOUNTS.

The accounts for telegraphic service examined by this office and transmitted for settlement were 1,279, amounting to $322,963.05.

### VESSELS OWNED BY THE QUARTERMASTER'S DEPARTMENT.

This Department has kept in service at points named, where constant use is required, twenty-six vessels, which it owns. The cost of maintaining these, including repairs, during the fiscal year 1900 was $196,662.29. This statement is exclusive of transports purchased or chartered for transportation of troops and supplies between the United States and Cuba, Porto Rico, and the Philippines.

| Name. | Class. | Tonnage. | When purchased or built. | Cost or estimated value. |
|---|---|---|---|---|
| General Hancock | Ferryboat | 171.15 | Apr. 1, 1898 | $31,165.00 |

[1] Transferred for exclusive use of Ordnance Department July 1, 1899.

[2] Sold at auction to highest bidder January 4, 1900, for $625.

## ARMY TRANSPORT SERVICE.

At the beginning of the fiscal year there were in the service of the Quartermaster's Department nineteen owned transport ships and two hospital ships. The following is a list of the ships, showing their tonnage, carrying capacity, and the nature of the duties in which they were engaged:

### ATLANTIC FLEET.

| Name. | Tonnage. | Capacity. | | Remarks. |
|---|---|---|---|---|
| | | Officers. | Men. | |
| Buford | 3,732 | 61 | 1,000 | |
| Burnside | 2,194 | 27 | 273 | |
| Crook | 4,126 | 54 | 1,000 | |
| Ingalls | 1,147 | 26 | 260 | |
| Kilpatrick | 3,722 | 61 | 1,000 | |
| Logan | 5,673 | 86 | 1,648 | Refitting for the Pacific. |
| McClellan | 2,792 | 30 | 200 | |
| McPherson | 3,656 | 66 | 500 | |
| Meade | 5,641 | 60 | 1,171 | Do. |
| Sedgwick | 4,770 | 59 | 1,000 | |
| Terry | 1,338 | 81 | 400 | |
| Wright | 777 | 5 | 80 | |
| Thomas | 5,796 | 95 | 1,654 | Do. |
| Hospital ship Missouri | 2,903 | .......... | 500 | Do. |

### PACIFIC FLEET.

| Name. | Tonnage. | Officers. | Men. | Remarks. |
|---|---|---|---|---|
| Grant | 5,658 | 68 | 1,836 | |
| Hancock | 5,000 | 54 | 1,062 | |
| Sheridan | 5,673 | 93 | 1,843 | |
| Sherman | 5,780 | 69 | 1,750 | |
| Warren | 4,243 | 42 | 1,242 | |
| Hooker | 2,085 | .......... | .......... | Cable ship. |
| Hospital ship Relief | 3,095 | 20 | 252 | |

During the year five vessels were purchased or transferred from the Navy Department and added to the transport fleet, viz:

The steamship *Cassius*, having a tonnage of 3,458 tons, was purchased from the Navy Department for the sum of $160,594, payment of which was made by the transfer of that amount from the allotment of the appropriation for "National defense" to War Department to the credit of the same appropriation to the Navy Department.

This ship was fitted up as a troopship by the Navy Department at the Norfolk Navy-Yard, upon specifications prepared by the officers of this Department, at a total cost of $649,576.89, which sum includes an expenditure of $194,922.43 for auxiliary machinery, fittings, and supplies placed upon the ship.

The vessel was renamed the *Sumner*. She sailed from New York for Manila on March 31, 1900, via the Suez Canal route, with 46 officers, 649 recruits, 3 female nurses, and 7 civilian employees, a total of 705 passengers. She arrived in Manila on May 23, 1900, without casualty.

The vessel has since made the voyage to San Francisco and returned with troops and supplies to Taku, China, via Nagasaki, and is now engaged in running between Nagasaki and Taku for such service as may be required in the movement of troops serving in China.

The steamship *Columbia*, which had been under charter for the transportation of troops from San Francisco to the Philippines, after making two voyages, was offered for sale to the Government at a price considered to be exceedingly reasonable. There being a pressing need for increase of the army transport fleet on the Pacific, the vessel was purchased from her owners, The North American Mail Steamship Company, for the sum of $147,200. The registered tonnage of the vessel is 2,976 tons. Her name was changed to *Rosecrans*. The ship being already fitted to carry troops, was sent to Seattle, Wash., and was used for moving troops and supplies to Alaska.

The U. S. steamships *Badger* and *Resolute*, which had been purchased by the Navy Department for service in the war with Spain, from the appropriation "National defense," were, by order of the President, transferred to the War Department, and were fitted up for the army transport service. The S. S. *Badger* was at the Mare Island Navy-Yard, Cal., and her services being needed for transporting troops and supplies to the Department of Alaska, she was temporarily fitted for the service, at a cost of $125,000. She was renamed the *Lawton*. Her registered tonnage is 3,497 tons. She left San Francisco for Seattle on May 24, 1900, and has made two voyages to Alaska with troops and supplies. On her last voyage from Cape Nome to Seattle she brought to the United States 220 destitute citizens, and is now under orders to return to Alaska for another load of destitute citizens, being fitted to carry nearly 700 passengers. She has on board two army surgeons and a detachment of enlisted men to act as guard and assist in caring for the sick who may be on board on the return voyage.

The steamship *Resolute* was at the United States Navy Yard at Norfolk, Va., when transferred to the War Department.

Specifications for the repairs and fitting the vessel for service were prepared and a contract entered into for the work with the William Cramp & Sons' Ship and Engine Building Company, of Philadelphia, at a cost of $100,877.

This ship was renamed the *Rawlins*. Her tonnage is 2,898 tons. The work on her was completed just at the close of the fiscal year, and the ship is now in service on the Atlantic, transporting troops and supplies between New York and the West Indies.

The steamer *George W. Dickinson* was purchased at Seattle, from Mr. E. E. Caine, for the sum of $145,000. This vessel was in course of construction when purchased, and such changes as were required to fit her for service as a dispatch boat for the general commanding the Department of Alaska were made while she was being completed. These alterations consisted of additional rooms for accommodation of passengers, providing additional lavatory, heating and lighting facilities, lifeboats, refrigerating and ice plant, etc., costing in the aggregate, $13,879.75.

The vessel is very strongly built, with a view to moving safely through ice; is 1,200 tons burden, and is thoroughly suited and equipped for a dispatch boat in Alaskan waters. She is renamed the *Seward*.

The vessel has recently returned from Alaska to Seattle and is having 100 bunks installed upon her for accommodation of troops, when being transported from one station to another.

Two regular lines of transport ships were maintained during the year between the United States and the West Indies—one sailing weekly from New York to San Juan, Porto Rico, thence to Santiago, Cuba, and return to New York; the other sailing about every ten days from New York to Matanzas, Havana, and Cienfuegos, Cuba, thence returning to Havana and New York. For this service seven transports have been employed, viz, the *Buford*, *Burnside*, *Crook*, *Kilpatrick*, *McClellan*, *McPherson*, and *Sedgwick*. During the year the army transports *Crook* and *Sedgwick* were out of commission for a season, under repair and refitting.

The repair and refitting of the *Sedgwick* was done under contract by the John N. Robins Company, of New York, for the sum of $129,500.

As the work progressed, repairs and alterations additional to those provided for in the original contract were found necessary to be made and additional sums were authorized from time to time aggregating $76,268, making the total cost for refitting and repairing the ship $205,768.

The army transport *Crook* was repaired and refitted by the John N. Robins Company at a total cost of $303,217.47.

Both of these ships are capable each of transporting comfortably over 50 officers and 1,000 enlisted men.

The exigencies of the services have been such as to prevent any of the other transport ships now in service on the Atlantic to be permanently refitted, but such work has been done upon them from time to time as to keep them at all times in thorough repair and in condition for the safe and comfortable accommodation of the officers and troops being transported upon them.

In my last annual report it was stated that the army transports *Thomas*, *Logan*, and *Meade* had been designated for transfer to the Pacific, and were then in the hands of the contractors being fitted up for that service. Also that the work of refitting the hospital ship *Missouri* was completed and the ship was under orders to sail for Manila. The *Missouri* sailed from New York on September 30, 1899, via the Suez Canal, with a full complement of medical officers, nurses, and enlisted men of the Medical Corps, and arrived in Manila on November 28, 1899. The vessel made the voyage from Manila to San Francisco with sick and wounded soldiers on board, arriving at San Francisco February 13, 1900. Upon an inspection of the ship it was found that to make her available for a hospital ship on the Pacific extensive alterations and repairs at a considerable cost were necessary, and as each of the army transport ships were provided with hospital accommodations ample for the returning invalid soldiers from the Philippines, it was decided to convert the *Missouri* into a transport ship of the freight class.

This was accordingly done, and the ship renamed the *Egbert*. The vessel has been used for the transportation of supplies to Alaska during the past summer.

The work of refitting and repairing the army transports *Thomas*, *Logan*, and *Meade*, which was reported in my last annual report, was completed during the year at a total cost for each as follows:

| | |
|---|---|
| Thomas | $283,391.43 |
| Logan | 304,351.50 |
| Meade | 314,038.62 |

These transports, when completed, sailed from New York to Manila by the Suez Canal route. The *Thomas* sailed November 4, 1899, with 46 officers and 1,286 enlisted men of the Forty-seventh U. S. Volunteer Infantry, 11 officers of other commands, and 77 nurses, enlisted men of the Hospital Corps and civilian employes, a total of 1,420 passengers.

The army transport *Meade* sailed from New York on November 16, 1899, with 44 officers and 1,106 enlisted men of the Forty-third Volunteer Infantry, 4 officers of other commands, and 15 other passengers, a total of 1,169 passengers.

The army transport *Logan* sailed from New York on November 20, 1899, with 52 officers and 1,381 enlisted men of the Forty-first U. S. Volunteer Infantry, 3 officers of other commands, and 29 other passengers, a total of 1,465 passengers. These vessels all made successful voyages, and arrived at Manila without casualty.

During the fiscal year the army transport *Hancock* was refitted in San Francisco by the Union Iron Works at a cost of $456,420.52. This ship was formerly the *Arizona*, and had been in the commercial trade with China. She was purchased in 1898, to meet the demands for the transportation of troops to the Philippines, and was only temporarily fitted for that service. The vessel is now a model troopship, and is doing excellent service.

The fitting up of these vessels for service as troopships has been made in the most thorough and complete manner, upon specifications prepared with great care. Every report and criticism received regarding the fitting of the army transports *Grant*, *Sherman*, and *Sheridan*, which had preceded them to the Pacific service the previous year, were carefully considered, and every improvement suggested in them, if found to be conducive to the comfort and well-being of the troops during their long voyage, has been made upon them. It can be truthfully said that the ships which have been fitted out for transporting troops between the United States and the Philippines are in every respect better equipped for such service than the transports of any other nation.

Foreign nations have become interested in these transports, and in response to requests of representatives of England, France, Germany, Japan, and Russia, this office has furnished to them copies of the plans and specifications upon which the transports have been fitted.

Two other large army transports, viz, *Buford* and *Kilpatrick*, are now being refitted for service on the Pacific. The *Buford* is being done under contract with the Newport News Ship Building and Dry Dock Company at Newport News, Va., at a cost of $397,637; the *Kilpatrick* under contract with the John N. Robins Company, of New York, at a cost of $408,000.

In preparing the specifications for the work required on these ships, they were first taken out of commission and their machinery thoroughly opened up for inspection. This has enabled specifications to be prepared for the work required upon them with great minuteness, and the expenditure in excess of the original contract price will be comparatively small. Both of these ships are to be completed in October, and are expected to sail from New York for Manila early in November, 1900.

The army transport *Hooker*, which had been fitted up in the previous fiscal year for a cable ship for the Signal Service of the Army, and sent to the Philippines, sailing from New York on May 1, 1899, via the Suez Canal route, arrived safely at Manila on June 26, 1899. On August 11, 1899, the vessel was ordered to proceed to Hongkong, China, for coaling, and on leaving the harbor of Manila ran aground near Corregidor Island. Every effort to save the vessel proved unavailing and the ship became a total loss. The original cost of this vessel was $41,000 and the sum of $130,213 was expended in fitting her up for a cable ship.

Since the close of the fiscal year the army transport *Burnside* has been taken out of commission and fitted up in New York to transport deep-sea cable to the Philippines for the Signal Corps of the Army. The ship is provided with three tanks, in which are stored about 550 miles of cable, and is also provided with all necessary appliances for laying the cable.

The following is the list of the army transport ships in service of the Department at the end of the fiscal year, showing their tonnage, carrying capacity, and where employed, viz:

| Name. | Tonnage. | Passenger capacity. | | Cargo capacity (tons). | Remarks. |
|---|---|---|---|---|---|
| | | Officers. | Men. | | |
| Buford | 3,732 | 61 | 1,000 | 1,000 | Being fitted for Pacific. |
| Burnside | 2,194 | 27 | 273 | .......... | Being fitted for Pacific cable ship. |
| Crook | 4,126 | 54 | 1,000 | 1,500 | Atlantic fleet. |
| Egbert | 2,903 | 21 | 650 | 1,500 | Pacific fleet. |
| Grant | 5,658 | 68 | 1,836 | 2,400 | Do. |
| Hancock | 5,000 | 54 | 1,062 | 1,500 | Do. |
| Ingalls | 1,147 | 26 | 260 | 500 | Under orders for San Juan as dispatch boat. |
| Kilpatrick | 3,722 | 61 | 1,000 | 1,000 | Atlantic fleet. |
| Lawton | 3,497 | 60 | 700 | 1,600 | Pacific fleet. |
| Logan | 5,673 | 86 | 1,648 | 2,435 | Do. |
| McClellan | 2,792 | 30 | 200 | 1,800 | Atlantic fleet. |
| McPherson | 3,656 | 66 | 500 | 2,000 | Do. |
| Meade | 5,641 | 60 | 1,171 | 1,430 | Pacific fleet. |
| Rawlins | 2,898 | 59 | 500 | 1,000 | Atlantic fleet. |
| Relief | 3,095 | 20 | 252 | .......... | Hospital ship, Pacific fleet. |
| Rosecrans | 2,976 | 26 | 636 | 1,300 | Pacific fleet. |
| Sedgwick | 4,770 | 59 | 1,000 | 1,025 | Atlantic fleet. |
| Seward | 1,200 | 15 | 200 | 600 | Dispatch boat in Alaska. |
| Sheridan | 5,673 | 93 | 1,843 | 2,400 | Pacific fleet. |
| Sherman | 5,780 | 69 | 1,750 | 2,400 | Do. |
| Sumner | 3,458 | 57 | 780 | 500 | Do. |
| Terry | 1,338 | 81 | 400 | .......... | Out of commission in New York. |
| Thomas | 5,796 | 95 | 1,654 | 2,204 | Pacific fleet. |
| Warren | 4,243 | 42 | 1,242 | 2,000 | Do. |
| Wright | 777 | 5 | 80 | 300 | Being repaired for dispatch boat. |

### THE ARMY TRANSPORT SERVICE IN CUBA AND PORTO RICO.

No important changes in the number of troops serving on the islands of Cuba and Porto Rico were made during the fiscal year.

There have been transported from the United States to Cuba on the army transport ships 195 officers, 3,297 enlisted men, and 960 civilian passengers, a total of 4,452 persons; and from Cuba to the United States 291 officers, 5,416 enlisted men, and 2,526 civilians, a total of 8,233 persons; making a total movement between the United States and Cuba of 12,685 passengers.

There were transported from the United States to Cuba 23 animals, 56,128 tons of freight, and 871,936 packages and pieces of baggage; and from Cuba to the United States 1,881 animals, 3,943 tons of freight, and 44,192 packages and pieces of baggage.

There were also brought from Cuba on the transport ships 421 remains of deceased officers, soldiers, sailors, and civilian employees for interment in the United States.

The movements by army transports from the United States to Porto Rico has been 90 officers, 941 enlisted men, and 699 civilians, a total of 1,730 passengers; and from Porto Rico to the United States 99 officers, 995 enlisted men, and 983 civilians, a total of 2,077 passengers. The total movement between the United States and Porto Rico has been 3,807 passengers.

There were transported from the United States to Porto Rico 6 animals, 32,307 tons of freight, and 505,111 packages and pieces of baggage; and from Porto Rico to the United States 498 animals, 706 tons of freight, and 8,785 packages and pieces of baggage. The remains of 115 officers, soldiers, and civilian employees who have died on the island were also brought to the United States for interment.

In August, 1899, the island of Porto Rico was swept by a hurricane which created great destruction and loss among the people of the island. The citizens of this country promptly contributed large quantities of relief supplies, consisting of food, clothing, and building materials. A committee of citizens was appointed by the Secretary of War, of which Hon. C. N. Bliss was chairman, to receive and forward such relief supplies as were offered. To this committee the Quartermaster's Department tendered the facilities of the army transport service for the delivery of supplies to San Juan, Porto Rico, whence distribution was made to the destitute.

There were shipped on the army transports from New York to Porto Rico 1,170 tons of relief supplies donated by citizens, and 3,377 tons of subsistence supplies shipped by the Subsistence Department of the Army for the relief of the storm sufferers.

At the ports in Cuba and Porto Rico there have been mintained aa fleet of lighters, tugs, and sloops for the handling of freight and for the distribution of supplies to the garrisons on the islands. The following is a list of these vessels, showing their class and where employed, viz:

| Name. | Class. | Where employed. |
|---|---|---|
| Ord | Tug | At Manzanillo. |
| Reno | do | At Havana. |
| Reynolds | do | Do. |
| Richardson | do | At Matanzas. |
| Slocum | do | At San Juan, P. R. |
| Gibbon | do | At Nuevitas. |
| Weitzel | do | At Santiago. |
| Baker | Steam lighter | At Havana. |
| Poe | do | Do. |
| Williams | do | At Manzanillo. |
| Kearney | do | At Havana. |
| Esparanza | Sloop | At Gibara. |
| Miguel | do | Do. |

Of the above-mentioned vessels the steam lighter *Poe* was withdrawn from the service in Cuba and is now on duty as a harbor boat at Fort Barrancas, Fla.; the tugs *Reno*, *Reynolds*, and *Weitzel* have been withdrawn from service in Cuba, and are now in New York. These three tugs will probably be made available for service in the harbor of New York and dispense with the service of those which are now hired for the docking and handling of the transport ships.

The tug *Slocum* was withdrawn from the service at San Juan, P. R., and was sent to New York, where she was put in thorough repair, and sent to San Francisco for service in handling the army transport ships and lightering passengers and supplies. The *Slocum* is a large and powerful tug, and all efforts to secure such a one on the Pacific coast having failed, it was determined to send her there for service. The vessel left New New York on July 12, 1900, via the Straits of Magellan. Heavy storms were encountered, detaining the vessel en route. She arrived at San Francisco on October 6, 1900, making the entire voyage in eighty-six days.

Three small transport ships were in service in Cuba during the year, viz: The *Ingalls* at Havana and the *Wright* at Santiago as dispatch boats for the commanding generals at those places, and the *Terry* in service of the Medical Department for a short period.

The reduction of the garrisons of the island rendered unnecessary the service of these vessels, and they have been withdrawn from there, the *Terry* and *Wright* being sent to New York and put out of commission, and the *Ingalls* sent to San Juan for service as a dispatch boat for the commanding general, Department of Porto Rico. It is believed that the *Ingalls* would be a useful vessel for the interisland service in the Philippines, and the subject of sending her there and sending the *Wright* to San Juan in her place is now under consideration.

During the year the War Department purchased from the Navy Department two small steamers, the *Kanawha* and *Viking*, for the customs service in Cuba, the former at a cost of $50,000 and the latter $30,000, payment of which was made by the transfer of the amounts from the appropriation for "National defense."

The vessels were fitted up and sent to Cuba, where after trial they were found unsuited for the customs service, and they have been transferred to the army transport service. The *Kanawha* has been assigned to service at Havana as a dispatch boat for the commanding general, Division of Cuba. The *Viking* is under orders to be sent to the States for future disposition of her services where needed.

### CUBAN SCHOOL-TEACHERS.

Upon invitation of the authorities of the Harvard University, the native school-teachers in Cuba were given several weeks' instruction during the past summer at that institution. These teachers to the number of 1,273 were transported on the army transports from the several ports in Cuba to Boston, leaving Cuba during the last days of June, 1900, and arriving in Boston early in July. For this service five army transport ships, viz, *Crook*, *McClellan*, *Burnside*, *McPherson*, and *Sedgwick*, were specially fitted up for the accommodation of the gentlemen and ladies of the party. The teachers were returned from Boston to Cuba by four army transports—*Crook*, *McPherson*, *Sedgwick*, and *Rawlins*—in August, 1900, sailing via New York and Philadelphia, in which cities they were entertained.

### THE ARMY TRANSPORT SERVICE ON THE PACIFIC.

At the beginning of the fiscal year preparations were being made for the transportation of an army to the Philippines and the return from there of the volunteer troops whose term of service had expired. For this service there were on the Pacific five owned transport ships, the *Grant*, *Sherman*, *Sheridan*, *Hancock*, and *Warren*, with a combined carrying capacity of 326 officers and 7,733 enlisted men. There were at the time under charter the following-named vessels, fitted for carrying troops, viz:

| Name of vessel. | Carrying capacity. | | Name of vessel. | Carrying capacity. | |
|---|---|---|---|---|---|
| | Officers. | Men. | | Officers. | Men. |
| Newport | 32 | 540 | Senator | 49 | 1,000 |
| Ohio | 30 | 956 | Valencia | 26 | 635 |
| Indiana | 43 | 984 | Zealandia | 32 | 700 |
| Pennsylvania | 50 | 1,280 | | | |
| Morgan City | 22 | 709 | Total | 284 | 6,804 |

For this service the following additional ships were chartered and fitted up for the accommodation of troops:

| Name of vessel. | Carrying capacity. | | Name of vessel. | Carrying capacity. | |
|---|---|---|---|---|---|
| | Officers. | Men. | | Officers. | Men. |
| Sikh | 22 | 641 | Glenogle | 30 | 718 |
| Tartar | 45 | 1,176 | Charles Nelson | 22 | 210 |
| City of Para | 46 | 989 | Manauense | 15 | 381 |
| St. Paul | 42 | 800 | Olympia | 19 | 604 |
| City of Sydney | 25 | 710 | City of Peking | 39 | 928 |
| City of Puebla | 25 | 856 | Benmohr | 21 | 550 |
| Columbia | 26 | 636 | Pathan | 23 | 705 |
| Belgian King | 27 | 780 | Duke of Fife | 40 | 900 |
| Tacoma | 27 | 735 | Dalny Vostock | 26 | 800 |
| George W. Elder | 23 | 496 | | | |
| City of Rio de Janeiro | 28 | 718 | Total | 571 | 14,328 |

Upon these ships there were transported from San Francisco to the Philippines 1,464 officers and 34,664 enlisted men; from Seattle, Wash., 25 officers and 981 enlisted men, and from Portland, Oreg., 108 officers and 2,999 enlisted men, a total of 40,241 troops, in addition to which there were 1,870 nurses, civilian employees, and other persons, making a total of 42,111 passengers transported from the Pacific coast. This number, however, includes the cavalry troops who were detailed to accompany the animals of their regiments on animal transports.

The steamship *Morgan City*, which sailed from San Francisco on August 10, 1899, with 8 officers, 675 recruits, 25 enlisted men, nurses, and postal clerks, on the morning of September 2, 1899, while making passage through the inland Sea of Japan, in charge of a local pilot, struck a rock. Upon being floated by the rise of the tide, it was found the vessel was leaking badly, and she was accordingly beached and became a total wreck.

The officers and men were all safely landed on the shore of the small island of Innoshima. The officers in command of the troops visited the mainland and communicated by telegraph to the United States minister at Tokyo the conditions existing, who promptly took measures for the relief of the stranded troops. A warship of the Japanese Government was sent to offer any needed assistance, and through the courtesy of the Japanese Government abundance of food supplies were purchased and sent to the troops. These stranded troops were subsequently taken to Nagasaki, where they were embarked on the chartered transport *Ohio*, which was dispatched from Manila for the purpose, and arrived in Manila on September 19, 1899.

With this exception no serious accident has occurred on the troopships, and the large body of troops have been transported from the United States to the Philippines without casualty.

There were transported from the Philippines to the United States during the fiscal year 944 officers, 12,593 enlisted men, and 7,117 other persons, a total movement of 20,654 passengers. These include the return to the United States for muster out of service of the following volunteer troops, viz, Second Oregon, Tenth Pennsylvania, First Nebraska, Utah Artillery, First Colorado, First California, California Artillery, First Wyoming, Wyoming Artillery, First North Dakota, First Idaho, First South Dakota, Thirteenth Minnesota, First Montana, Twentieth Kansas, First Washington, Fifty-first Iowa, First Tennessee, Nevada Cavalry, and Volunteer Signal Corps.

The army transports *Grant*, *Sherman*, and *Sheridan*, after over a year's service between San Francisco and Manila, were found to require renewal of their old decks which were on them when purchased, and work is being done upon them, one at a time, as they can be spared from the service. In May, 1900, contract was entered into with the Fulton Engineering and Shipbuilding Works of San Francisco to put new decks on the army transport *Sheridan*, and make such other repairs to the ship as required, for the sum of $285,475. This work is now nearly completed, and another one of the ships will be redecked and repaired as her services can be spared for the purpose.

### TRANSPORTATION OF ANIMALS AND SUPPLIES TO THE PHILIPPINES.

During the fiscal year three large troopships were transferred from the Atlantic to the Pacific fleet, viz, *Thomas*, *Meade*, and *Logan*, which increased the number in the latter fleet to eight. With these transports a semimonthly sailing between San Francisco and Manila was arranged, so that a transport would leave each port on the 1st and 16th of each month. In the event of the sailing date occurring on Sunday the ship leaves San Francisco on the preceding day.

In addition to the accommodation for troops and their baggage, these ships have a large freight-carrying capacity and are used in transporting a large amount of quartermaster, subsistence, medical, and other supplies for the army in the Philippines, but the increase in the military force serving there largely augmented the demand for animals for the cavalry and artillery, means of transportation, and supplies for the army, making additional freight and animal ships necessary.

For the transportation of animals special care has been exercised in selecting suitable ships. Transports of large carrying capacity are necessary, as an ample supply of forage must go on each ship to sustain the animals en route.

For the safety and comfort of the animals, stalls are constructed on the ships of smoothly planed lumber, and material placed on board for padding the stalls in case the animals become chafed. Extra stalls are provided to enable the animals to be changed from one to another, and space left on the decks where the animals may be exercised when the sea is smooth. Slings made of heavy canvas of sufficient strength to support the weight of the animals are also provided, if their use should become necessary. Especial attention has been given to the subject of ventilation. Electric plants have been installed for lighting the ships and running fans for forcing fresh air between decks occupied by the animals and for exhausting the foul air in them, which are supplemented by wind sails attached to the hatches and ports. A condensing apparatus is placed on the ships to provide an ample supply of fresh water. Upon each of the ships a hospital is provided, where the sick animals may lie down and be treated and cared for. A veterinary surgeon and a corps of experienced caretakers for the animals accompany each ship. In a word, everything is provided on these ships that will be conducive to the safety and comfort of the animals during their long voyage.

During the fiscal year fifteen ships and one sailing vessel have been chartered for the transportation of animals and freight.

A corral has been established at Honolulu where the animals are landed for rest and recuperation before resuming the voyage to Manila.

In December, 1899, the bubonic plague broke out at Honolulu and the touching of the army transport ships at that port was prohibited. The animals were then landed at Hilo, another island of the Hawaiian group, where they were rested before continuing the voyage to the Philippines.

Arrangements were also made through the courtesy of the Japanese Government to permit animals en route to the Philippines to be landed at Kobe for rest and recuperation, and a large number have been landed at that port instead of stopping at Honolulu or Hilo.

There have been shipped from the Pacific coast during the fiscal year 10,315 animals. This service, as a rule, has been most satisfactorily performed, the animals arriving at the end of their voyage in good condition and the losses en route not greatly if at all exceeding the percentage of loss among similar numbers of animals when herded on land, except in two shiploads, which became damaged by encountering severe storms, viz, the steamship *Siam*, which sailed from San Francisco on August 19, 1899, with 47 horses and 326 mules on board, ran into a typhoon off the coast of the island of Luzon, and arrived in the harbor of Manila with only 16 mules alive and fit to land; and the steamship *Victoria*, which left Seattle on November 23, 1899, with 404 animals on board, sailed via the northern route, encountered a severe storm and was compelled to return to Seattle four days later. Eighty-seven of the animals on board were either killed or subsequently died of their injuries, and the remainder were too badly maimed and bruised to permit of their reshipment at that time. The *Victoria* was then sent to San Francisco, from whence she took a load of animals to Manila via Honolulu and the southern route.

For the large number of animals in the Philippines it is necessary to provide large quantities of forage. Hay and grain are purchased largely in the markets of the North Pacific coast, and shipped thence direct to Manila. It has been established that in case of shortage of American forage, the native grass can be substituted during the emergency with fair results. This native forage, however, can only be obtained in a very limited quantity.

Upon the owned and chartered transports there have been shipped to the Philippines from the Pacific coast 12,362 tons of hay, 11,211 tons of oats, 307 tons of bran, and 15 tons of barley, and upon ships hired at tonnage rates there have been shipped 2,878 tons of hay, 1,357 tons of oats, and 39 tons of bran. From New York there was shipped to Manila at tonnage rates 1,761 tons of forage, making a total shipment during the fiscal year of 29,930 tons of forage.

There have also been transported from the Pacific coast ports to the Philippines during the fiscal year 146,071 tons of army supplies, 1,093,812 packages, 336,247 pounds of mails, and $5,844,500 in money. There were also transported by ships hired by tonnage rates 15,089 tons of military supplies.

The following is a statement of the ships employed under charter during the fiscal year, showing from whom chartered, tonnage, class, date of charter, rate of charter, date of discharge, etc., viz:

| Name of vessel. | Name of owner. | Tonnage. | Class. | Date of charter. | Rate of charter. | Charter price reduced to following rate per day. | Remarks. |
|---|---|---|---|---|---|---|---|
| Ohio | Empire Transportation Co | 2,072 | Troop ship | May 27, 1898 | $25,000 per month |  | Discharged Feb. 15, 1900. |
| Senator | Pacific Coast Steamship Co | 2,409 | do | June 8, 1898 | $1,000 per day |  | Discharged Aug. 3, 1899. |
| Do | Rechartered |  |  | Aug. 3, 1899 | $750 per day |  | Discharged Feb. 6, 1900. |
| Indiana | Empire Transportation Co | 2,484 | Troop ship | June 8, 1898 | $25,000 per month | Feb. 11, 1900, to $600 | Still in service. |
| Newport | Pacific Mail Steamship Co | 3,000 | do | June 20, 1898 | $1,000 per day |  | Discharged Jan. 1, 1900. |
| Pennsylvania | Empire Transportation Co | 3,166 | do | July 7, 1898 | $25,000 per month | Jan. 17, 1900, to $600 | Still in service. |
| Tacoma | Alaska Packers' Association | 1,738 | Sailing ship (animal). | July 11, 1898 | $200 per day | July 1, 1899, to $150 | Discharged Jan. 27, 1900. |
| Morgan City | John Barneson and Richard Chilcott, agents. | 2,295 | Troop ship | Jan. 5, 1899 | $600 per day |  | Sunk in Japan Sea Sept. 2, 1899. |
| Centennial | do | 2,075 | Animal ship | Jan. 27, 1899 | $275 per day |  | Discharged July 1, 1899. |
| Do | Rechartered from Chas. Nelson |  |  | July 1, 1899 | do |  | Discharged Jan. 9, 1900. |
| Conemaugh | Empire Transportation Co | 2,328 | Animal ship | Feb. 14, 1899 | $650 per day | Jan. 22, 1900, to $600 | Discharged May 19, 1900. |
| Do | Rechartered |  |  | June 14, 1900 | $400 per day |  | Still in service. |
| Leelanaw | Saginaw Steel Steamship Co | 1,924 | Animal ship | Apr. 14, 1899 | $600 per day | Feb. 1, 1900, to $550<br>June 4, 1900, to $475 | Do. |
| Wyefield | H. J. Hart | 5,200 | do | June 12, 1899 | $650 per day | May 1, 1900, to $500 | Do. |
| Valencia | Pacific Steam Whaling Co | 1,198 | Troop ship | June 17, 1899 | $400 per day |  | Discharged Dec. 27, 1899. |
| Zealandia | Oceanic Steamship Co | 2,489 | do | June 14, 1899 | $18,000 per month |  | Discharged Dec. 13, 1899. |
| Tartar | H. J. Hart | 4,425 | do | July 4, 1899 | $1,000 per day | Jan. 3, 1900, to $850 | Discharged Apr. 23, 1900. |
| City of Para | Pacific Mail Steamship Co | 3,532 | do | July 6, 1899 | $800 per day |  | Discharged Dec. 15, 1899. |
| Garonne | Frank Waterhouse | 3,901 | Animal ship | July 21, 1899 | $700 per day |  | Discharged Apr. 4, 1900. |
| Athenian | Canadian Pacific Rwy. Co | 3,882 | do | July 22, 1899 | $800 per day |  | Discharged May 2, 1900. |
| Do | Rechartered |  |  | May 14, 1900 | $600 per day |  | Still in service. |

| Athenian | Freight ship. | | |

### MOVEMENTS TO AND FROM HONOLULU.

There have been transported from the United States to Honolulu 5 officers, 62 enlisted men, and 81 other passengers, and 2,930 tons of stores. From Honolulu there have been transported to the United States 1 officer, 8 enlisted men, and 46 other passengers, and 20 tons of stores, and to Manila 5 officers, 214 enlisted men, and 9 other passengers, and 1,190 tons of stores, a total movement of 431 passengers and 4,140 tons of freight.

### DEPARTMENT OF ALASKA.

During the year the Department of Alaska was established and a military command sent to St. Michael and Nome for garrison duty. The Quartermaster's Department was called upon to provide the means of transportation for the troops and their supplies, which included large quantities of building materials and military supplies of all kinds. For this service the army transports *Egbert*, *Rosecrans*, and *Lawton* were detailed, and the steamship *Athenian* was chartered. The steamer *Seward* was also purchased and fitted up for a dispatch boat for the commanding general of the department. Upon these ships there were transported from Seattle, Wash., to St. Michael and Nome 26 officers, 565 enlisted men, and 291 civilian employees and other persons, a total of 882 passengers. These ships also carried 86 animals, 2,310 tons of military stores, and 3,681,000 feet of lumber.

Since the close of the fiscal year a steamship has been chartered and dispatched to Alaska with a supply of coal for the use of the command during the coming winter.

### THE ARMY TRANSPORT SERVICE IN THE PHILIPPINES.

Upon the military occupation of Manila in 1898, the supply of the army serving there was confined to the delivery of military supplies in the harbor of Manila by the transport ships. These supplies had to be lightered from the ships to the depot, a distance of 2 or more miles, and for this purpose the native cascoes and lorches had to be depended upon. These proved to be entirely inadequate to perform the service.

Upon recommendation of the chief quartermaster at Manila authority was granted in August, 1899, to purchase steam lighters, tugs, and launches to meet the needs for lighterage in that harbor. The report of the chief quartermaster at Manila shows that a daily average of over 1,000,000 pounds of stores can now be unloaded from the ships and delivered to the storehouses.

The distribution of the army serving in the Philippines to the various important islands of the archipelago rendered necessary the detail of ships for the transportation of troops and supplies from Manila to those islands. For this purpose the chartered steamships *Pennsylvania* and *Indiana* were ordered, on their arrival in Manila from San Francisco in February and March, 1900, to remain in Philippine waters under the orders of the chief quartermaster at Manila, for local service around the islands. These ships had previously been fitted for carrying troops and were well equipped for the purpose, and in addition could carry large quantities of stores.

It is designed to replace these ships by two other ships which are owned by the Department as soon as they can be fitted up and made suitable for the service.

The work performed by the army transport service in the Philippines during the fiscal year as reported, has been the movement from Manila to China of 37 officers, 1,271 enlisted men, and 37 other persons, and between Manila and other ports of the Archipelago of 693 officers, 15,023 enlisted men, 2,122 other persons, 588 animals, 8,150 tons of stores, a total movement of 19,178 passengers, 588 animals, and 8,150 tons of freight.

The coaling of army transport ships in the harbor of Manila has been a perplexing question, the lightering of coal to the ships out in the harbor and the transfer from the lighters to the ship bunkers by hand being a slow and costly process.

A vessel was purchased in Manila and anchored in the bay for use as a collier upon which hoisting apparatus with a capacity for delivering to the transport ships 600 tons of coal per day was installed.

Additional colliers being needed, efforts were made to secure suitable vessels in China and Japan without avail, and the sailing ship *St. Mark*, with a capacity for 2,700 tons of coal, was purchased during the fiscal year in New York, and fitted up and sailed from Norfolk, Va., for Manila via Cape Horn, with a load of coal on board, on July 11, 1900. The price paid for this ship was $50,000.

Another sailing ship, the *Cyrus Wakefield*, has been purchased in San Francisco since the close of the fiscal year and dispatched to Nanaimo for a load of coal, whence she will sail for Manila.

These ships on arrival in Manila will be dismantled, provided with hoisting apparatus, and anchored in the harbor for coaling purposes. They will be known as colliers Nos. 1, 2, and 3.

At certain seasons typhoons are of frequent occurrence in Manila harbor, during which it has been impossible to deliver coal to the ships. With these colliers it will be possible to coal the ships during a storm, the collier being towed under the lee of a point of land at Cavite, protected from the violence of the storm, where coal may be transferred to the ships with safety.

## REPATRIATION OF THE SPANISH PRISONERS IN THE PHILIPPINES.

The transportation of the Spanish prisoners from the Philippine Islands to Spain under the terms of the treaty of peace with the Spanish nation has continued under the contract with Messrs. J. M. Ceballos & Co. as the prisoners have been released from the hands of the Filipinos and brought into Manila, from whence they are shipped to Spain.

The bills presented for the services rendered under the contract show that there have been transported from the Philippine Islands to Spain 1,589 officers, 13,477 enlisted men, and 2,308 other persons, a total of 17,374 prisoners.

Settlement of these bills have been made in part by the payment of the sum of $1,304,647.50.

### REGULATIONS FOR THE ARMY TRANSPORT SERVICE.

The regulations for the government of the army transport service, approved by the Secretary of War on November 16, 1898, were found, upon actual application in the service, to require revision in many particulars, various amendments having been submitted to the Department by those whose duties were governed by them.

By Special Orders No. 293, Headquarters of the Army, Adjutant-General's Office, dated December 18, 1899, a board of officers, consisting of Col. Charles A. Woodruff, Subsistence Department, Maj. Henry S. Kilbourn, Medical Department, and Maj. Francis B. Jones, Quartermaster's Department, was convened to consider the proposed changes in and additions to the regulations.

The board submitted report of the changes and additions which they recommended be made, which, after careful revision, was approved by the Secretary of War on May 5, 1900, and the revised regulations have been promulgated for the government of the army transport service.

The fiscal year has been one of great activity for the army transport service, as shown by a summary of the work performed as herein reported.

A recapitulation of the reports received show the number of passengers, animals, and tons of freight moved during the year have been as follows:

| | Passengers. |
|---|---|
| From the United States to Cuba | 4,362 |
| From Cuba to the United States | 8,233 |
| From United States to Porto Rico | 1,730 |
| From Porto Rico to United States | 2,077 |
| From United States to the Philippines | 46,870 |
| From the Philippines to the United States | 20,654 |
| From United States to Honolulu | 148 |
| From Honolulu to United States and Philippines | 283 |
| From United States to Alaska | 882 |
| From Manila to China | 1,345 |
| To and from ports in the Philippine Islands | 17,838 |
| Total | 104,422 |

There were also brought to this country for reinterment from the islands of Cuba, Porto Rico, and the Philippines the remains of 1,761 officers, enlisted men, and civilian employees who had been killed or died of wounds or disease.

The following number of animals were transported:

| | |
|---|---|
| From the United States to Cuba | 23 |
| From Cuba to the United States | 1,881 |
| From United States to Porto Rico | 6 |
| From Porto Rico to the United States | 498 |
| From United States to the Philippines | 10,315 |
| From United States to Alaska | 86 |
| From Manila to other ports in Philippine Islands | 588 |
| Total | 13,397 |

The shipment of stores, as shown by the reports, have been on the—

| | Tons. |
|---|---|
| Atlantic | 97,631 |
| Pacific | 204,902 |
| In the Philippine Islands | 8,150 |
| Total freight moved | 310,683 |

The reports of expenditures at the principal ports of operations show that during the year there have been expended—

| | |
|---|---|
| For the purchase of vessels of all classes | $559,150.00 |
| For charter of ships | 6,974,004.65 |
| For the fitting up and repair of transport ships | 5,800,312.18 |
| A total expenditure for these objects of | 13,333,466.83 |

During the year, under instructions of the Secretary of War, I made a voyage to the Philippines, leaving New York on the army transport *Logan* on November 20, 1899, via the Suez Canal route, and arrived in Manila on January 3, 1900. I returned to the United States on a commercial steamship to San Francisco, visiting en route Hongkong and Shanghai, China, and Nagasaki, Kobe, and Yokohama, Japan. At Honolulu, by reason of the plague then prevailing, I did not land. Arriving in San Francisco on March 14, 1900, I subsequently visited Seattle and Tacoma, Wash., and arrived in this city on March 30, 1900.

This tour was made for the purpose of ascertaining the conditions prevailing in the army transport service in the Philippines and on the Pacific coast, and under special instructions of the Quartermaster-General I also inspected the conditions of the quartermaster's department in the Philippines, as regards means of land and water transportation, barracks and quarters, storehouses, clothing, forage, and other quartermaster's supplies, and also examined into the facilities at the several ports visited in China and Japan for docking and repairing vessels, coaling, and otherwise providing for the transport ships from time to time as required when calling at those ports. The result of my observations and inspection was fully set forth in a special report submitted to the Quartermaster-General upon my return to this office.

It is proper, however, that I state that my observations enabled me to report that at each of the places where the Quartermaster's Department is engaged in the purchase, transportation, and distribution of army supplies, the officers of the department responsible for these important duties are fully alive to the best interests of the service and are performing their duties with a zeal, energy, and fidelity highly commendable.

The voyage on the army transport *Logan* enabled me to personally observe the efficiency of the ship, which had just been fitted up for the accommodation of a large body of troops for a long voyage across the seas.

I am pleased to report that the equipment of the *Logan* was found to be in every respect complete for the accommodation and comfort of the officers and men on board. There were 1,492 passengers on the ship, which made the voyage from New York to Manila, a distance of 11,311 miles, in forty-five days. The account kept by the transport quartermaster of the expenses incurred for running the ship during the voyage, including the cost for fuel, wages, and subsistence of the crew, Suez Canal tolls, pilotage, etc., showed that the average cost per capita for transportation of each passenger on board from New York to Manila was $26.87. This proves beyond a doubt the economy in maintaining the army transport ships for the transportation of troops on long voyages.

During my absence the duties of chief of the transportation division of this office were efficiently performed by Maj. J. B. Bellinger, quartermaster of the Army, whose past experience in connection with the work of the army transport service well qualified him for the successful conduct of the business.

The year closed with active preparations being made to send troops and supplies into China to meet the needs of the Government in relieving the beleaguered representatives of the Government in Pekin and for protection of the citizens of the United States resident in China. No movements were, however, made from the United States until after the beginning of the present fiscal year.

It is gratifying to be able to report that the large work performed during the year has been accomplished without the sacrifice of a single human life by reason of any defect in the conduct of the transport service, and at a minimum of cost to the Treasury of the United States.

Respectfully submitted.

CHAS. BIRD,
*Quartermaster, United States Army,*
*Chief of Transportation Division.*

The QUARTERMASTER-GENERAL OF THE ARMY.

---

WAR DEPARTMENT,
QUARTERMASTER-GENERAL'S OFFICE,
*Washington, August 22, 1900.*

GENERAL: I have the honor to submit my report of operations of the business coming under my charge in your office for the fiscal year ended June 30, 1900.

In the finance branch are considered all matters relating to the procurement and distribution of funds, the compilation and preparation for Congress of the annual estimates of appropriations required for the service of the Quartermaster's Department and for the Quartermaster-General's Office, the examination of estimates of funds received from disbursing officers, the action upon settlements made at the Treasury Department, etc.

Attention is respectfully invited to the accompanying statements, showing in detail the balances on hand at the commencement of the fiscal year, the amounts credited from the appropriations, sales, etc., the remittances to officers, amounts paid out on account of settlements, the amounts carried to the surplus fund, etc.

### *Financial statement for fiscal year ending June 30, 1900.*

| Total | 110,137.40 | 500.00 | 29,228.00 | 24,677.50 | 7,708.69 | 346.50 | 172,598.09 |

## MONEY ACCOUNTS.

The assignment of work under this head consists of the administrative examination of the money accounts of officers serving in the Quartermaster's Department before their transmission to the Auditor for the War Department.

The following is a statement showing the number of accounts received, examined, and forwarded to the Auditor during the fiscal year ending June 30, 1900:

| | |
|---|---|
| Received during the year ending June 30, 1900 | 5,784 |
| Forwarded to the Auditor for the War Department during the year ending June 30, 1900 | 5,646 |

### RETURNS OF QUARTERMASTER'S SUPPLIES.

The work in this branch consists of the examination of quarterly returns of quartermaster's supplies for use of the Army, both regular and volunteer, and of the militia of the several States and Territories, and the correspondence pertaining to the same. Preliminary action is also taken on reports of boards of survey and inspection reports from quartermasters' depots and independent posts. The following statement shows the number of returns received and examined, and letters written during the fiscal year ended June 30, 1900, viz:

| | |
|---|---|
| Returns on hand June 30, 1899 | 154 |
| Returns received during fiscal year 1900 | 3,789 |
| Returns examined during fiscal year 1900 | 3,933 |
| Returns on hand June 30, 1900 | 10 |
| Annual returns of supplies for militia | 33 |
| Letters written pertaining to the above | 13,665 |

This is 839 less returns and 1,760 more letters than in 1899.

The returns received from volunteer officers during the fiscal year 1900 show a marked improvement over those for the previous year, many of which are still suspended awaiting satisfactory replies to letters of remark, and this is the cause of increase in number of letters written during fiscal year 1900.

The clerical force on duty in this branch June 30, 1900, was composed of 14 regular and 18 temporary clerks, who by diligent attention to duty have kept the work up to date without working extra hours, as was often required last year.

### MAIL AND RECORD DIVISION.

The following communications were received and letters and indorsements mailed during the fiscal year:

| | |
|---|---|
| Original cases | 15,987 |
| Received backs | 105,433 |
| Letters and indorsements mailed | 123,595 |

### MISCELLANEOUS CLAIMS AND ACCOUNTS.

There remained on hand at the beginning of the fiscal year awaiting action—

| | |
|---|---|
| 152 miscellaneous claims, amounting to | $88,652.28 |
| 347 accounts, amounting to | 27,443.48 |

There were received during the fiscal year—

| | |
|---|---|
| 293 miscellaneous claims, amounting to | 224,690.29 |
| 1,064 accounts, amounting to | 50,288.53 |
| Total, 1,856 claims and accounts, amounting to | 391,074.58 |

Final action was taken on these as follows:

| | |
|---|---|
| 54 claims were approved for payment | $9,444.85 |
| 166 claims were referred to other departments | 226,770.77 |
| 108 claims were sent to the Treasury Department for settlement | 19,040.49 |
| 69 claims were rejected | 21,842.10 |
| Reduction on claims referred | 23,580.31 |
| 669 accounts were approved for payment | 26,817.15 |
| Reduction on accounts approved | 1,022.00 |
| 449 accounts were referred to other departments | 20,982.54 |
| 61 accounts were rejected, amounting to | 8,558.13 |
| Total upon which final action was taken, 397 claims and 1,179 accounts, amounting to | 358,058.34 |

On July 1, 1900, there were on hand awaiting action—

| | |
|---|---|
| 48 claims, amounting to | $12,664.05 |
| 232 accounts, amounting to | 20,352.19 |
| Total, 280 claims and accounts | 33,016.24 |

### CLAIMS UNDER ACT OF JULY 4, 1864.

There remained in this office on July 1, 1900, not finally acted upon, 94 claims presented under the act of July 4, 1864, amounting to $119,104.12, the papers in one of this class of claims amounting to $100 having been transmitted to the Auditor for the War Department during the year. Action upon these claims has been suspended awaiting additional evidence.

The papers pertaining to 52 claims, amounting to $483,586.41, which had previously been investigated and disallowed by the Quartermaster-General, were during the year transmitted to the Court of Claims and Department of Justice for use as evidence in such cases as had been appealed to the Court of Claims under provision of the law of March 3, 1883, known as the Bowman Act, and the papers in three of such claims, amounting to $37,404.33, were transmitted to the Committee on War Claims, House of Representatives.

### NEWSPAPERS AND PERIODICALS.

During the fiscal year, newspapers and periodicals have been supplied for the enlisted men of the Army stationed within the States, in Cuba, and in Porto Rico, at 170 military post libraries at posts garrisoned by 344 companies and detachments, at a cost of $2,368.53, and to the enlisted men in the Philippines at a cost of $584.97.

### PRINTING AND BINDING.

During the fiscal year 143 requisitions were made on the Public Printer for printing and binding.

The cost for the work, so far as bills have been received, is $9,175.55, which sum does not include the cost of work done in the War Department branch printing office.

### NATIONAL CEMETERIES.

The national cemeteries are classed as follows:

| | |
|---|---|
| First class | 25 |
| Second class | 20 |
| Third class | 16 |
| Fourth class | 22 |
| Total | 83 |

The interments therein to June 30, 1900, were—

| | |
|---|---|
| Known | 190,653 |
| Unknown | 151,589 |
| Total | 342,242 |

Being an increase of 2,244 interments during the year, of which number 679, including remains of officers and soldiers from abroad, were interred in the Arlington, Va., and 596 in the San Francisco, Cal., national cemeteries.

There are 75 superintendents of national cemeteries, authorized by law; of these, 74 were in service at the commencement of the year. Changes during the year were: Appointed, 1; resigned, 1; died, 3; leaving 71 in service at the close of the year. There were also four assistant superintendents serving probationary terms pending permanent appointment.

### REMOVALS OF REMAINS.

Removals of remains of officers and enlisted men from abandoned post cemeteries and other places to permanent post or national cemeteries were made as follows:

| From— | To— | Number. |
|---|---|---|
| Potter's field, New Orleans, La | Chalmette, La., National Cemetery | 1 |
| Old Fort Spokane, Wash | Post Cemetery, Fort Wright, Wash | 42 |
| Do | National Cemetery, San Francisco, Cal | 1 |
| Fort Casper, Wyo | Post Cemetery, Fort D. A. Russell, Wyo | 10 |
| Frenchville, W. Va | Culpeper, Va., National Cemetery | 1 |
| Farm near Seven Pines, Va | Seven Pines, Va., National Cemetery | 1 |
| Reno battlefield, Mont | Custer Battlefield, Mont., National Cemetery | 4 |
| Camp Warner, Oreg | National Cemetery, San Francisco, Cal | 13 |
| Do | Post Cemetery, Vancouver Barracks, Wash | 1 |
| Camp Eagle Pass (Fort Duncan), Tex | San Antonio, Tex., National Cemetery | 72 |
| Camp Pena, Colorado, Tex | do | 9 |
| Morganton, N. C | Salisbury, N. C., National Cemetery | 5 |
| Light-house Reservation, Fort Morgan, Ala | Mobile, Ala., National Cemetery | 1 |
| Woodland Cemetery, Quincy, Ill | Soldiers' lot, Graceland Cemetery, Quincy, Ill. | 287 |
| Old Fort Wilkins, Mich | Lakeview Cemetery, Calumet, Mich | 7 |
| Total |  | 455 |

### HEADSTONES.

Six thousand nine hundred and thirty-three white marble headstones were provided to mark the graves of known Union soldiers, sailors, and marines in national, post, city, and village cemeteries.

### INDIGENT SOLDIERS.

Under the acts of Congress (sundry civil) making appropriations for "Expenses of burying in the Arlington National Cemetery, or in the cemeteries of the District of Columbia, indigent ex-Union soldiers, sailors, and marines of the late civil war, who die in the District of Columbia," claims for the burial of 58 such persons have been paid, at a total cost of $2,266.80.

### SOLDIERS' LOTS.

The work of improving the soldiers' lot in Oak Hill Cemetery, Evansville, Ind., for which a contract was made during the previous fiscal year, has progressed so far as the appropriation permitted, at an expenditure of $973.18. Instructions have been given for completion of the work under an additional appropriation of $615 (sundry civil), approved June 6, 1900.

At the soldiers' lot in City Cemetery at Baxter Springs, Kans., the fence was reconstructed, the grounds put in order, and a new wooden flagstaff erected.

### ANTIETAM BATTLEFIELD.

Under the appropriation, $1,000, sundry civil, approved March 3, 1899, "For repair and preservation of the monuments, tablets, observation tower, roads, fences, etc., made and constructed by the United States, upon public land within the limits of the Antietam battlefield, near Sharpsburg, Md.," a portion of one avenue was resurfaced with macadam, the fences and bridge repaired, and tablets painted, at an expenditure of $999.78.

## ROADWAYS.

### PENSACOLA, FLA.

The work of shelling and otherwise improving the roadway from Pensacola, Fla., to the national cemetery near that city, under the appropriation, $10,000, sundry civil, approved July 1, 1898, was completed at a total cost of $9,988.39, including the sum of $1,831.39, expended during the fiscal year ending June 30, 1899.

### NATCHEZ, MISS.

The work of improving and completing the road and sidewalks from the city of Natchez, Miss., to the national cemetery near that city, under the appropriation, $4,000, sundry civil, approved July 1, 1898, and for which a contract was made during the previous fiscal year, was completed at an expenditure of $3,501.70. The general condition of the road from the national cemetery to New street is good.

### MOUND CITY, ILL.

*Cache River Branch.*—Under the act of Congress approved June 4, 1900, appropriating the sum of $12,000 "for permanently repairing the Government roadway from Cache River bridge, in Pulaski County, Ill., to the graveled roadway extending from Mound City, Ill., to the national cemetery near that city," plans and specifications for the work are being prepared.

Under the act of Congress (sundry civil) approved March 3, 1899, making appropriation "for repairs to roadways to national cemeteries which have been constructed by special authority of Congress," necessary repairs have been made to the roadways to national cemeteries at Alexandria, Va.; Alexandria, La.; Antietam, Md.; Baton Rouge, La.; Corinth, Miss.; Culpeper, Va.; Fayetteville, Ark.; Florence, S. C.; Fredericksburg, Va.; Marietta, Ga.; Mound City, Ill., including the Cache River branch; Newbern, N. C.; Natchez, Miss.; Port Hudson, La.; Richmond, Va.; Springfield, Mo.; Staunton, Va., and Vicksburg, Miss. Amount expended, $9,392.09.

Memorial Day (May 30) was observed at the several national cemeteries by appropriate services conducted by the Grand Army of the Republic and military and other organizations.

## IMPROVEMENTS AND REPAIRS OF NATIONAL CEMETERIES.

At the Alexandria, La., National Cemetery necessary repairs were made to the lodge and outbuildings and a new wooden flagstaff, 75 feet in length, erected.

At the Antietam, Md., National Cemetery repairs were made to the lodge, outbuildings, and water supply, and the grounds properly cared for.

At the Arlington, Va., National Cemetery repairs were made to the enclosing walls, mansion, outbuildings, water supply, and drainage, and the grounds, walks, and drives kept in good order. The construction of brick outbuilding for protection of wagons, tools, etc., and the repairs to greenhouse and grading new grounds, under contracts awarded during the previous fiscal year, were completed.

Four captured guns were placed to ornament the section in which remains of soldiers of the war with Spain, returned from Cuba and Porto Rico, were interred, and two howitzers and a large anchor on the section in which the remains of 165 sailors and marines, victims of the disaster to the U. S. battleship *Maine* in the harbor of Havana, Cuba, February 15, 1898, were buried in December, 1899, with appropriate ceremonies.

The remains of a number of commissioned officers of the regular and volunteer service, returned from Cuba, Porto Rico, and the Philippine Islands, were interred in the officers' burial section, special reference being made in my remarks under the head of removal of remains.

At the Barrancas, Fla., National Cemetery necessary repairs were made to the buildings and a post and wire fence erected to inclose the lodge lot.

At the Baton Rouge, La., National Cemetery extensive repairs were made to the lodge, under contract, at an expenditure of $1,190.

At the Battle Ground, D. C., National Cemetery, upon representation by the Engineer Commissioner of the District of Columbia that the front inclosing wall of the cemetery encroached upon the public highway (Brightwood avenue), and a survey of the ground showing the encroachment to be as represented, a contract was made for setting back and reconstructing the wall on the proper line. The work is now in progress.

At the Beverly, N. J., National Cemetery necessary repairs were made to the lodge and water supply and a system for drainage constructed.

At the Camp Butler, Ill., National Cemetery the inclosing wall was repointed, the lodge repaired and papered, the outbuilding repaired, and the drainage reconstructed.

At the Chattanooga, Tenn., National Cemetery necessary repairs were made to the outbuildings, the grounds, walks, and drives kept in good order, and a brick addition made to the lodge for use as a kitchen.

At the Culpeper, Va., National Cemetery the brick addition to the lodge, contracted for during the previous fiscal year, was completed and necessary repairs made to the water supply and drainage.

At the Cypress Hills, N. Y., National Cemetery the water supply was thoroughly repaired, a water meter and new service pipe and connections put in, and the drainage put in good condition.

At the Fayetteville, Ark., National Cemetery the inclosing wall was repointed, the lodge repaired and painted, and the flagstaff and rostrum painted.

At the Fort Gibson, Ind. T., National Cemetery necessary repairs were made to the inclosing wall, lodge, and stable, and the flagstaff painted.

At the Fort Leavenworth, Kans., National Cemetery the lodge and rostrum were repaired and painted and the water supply and drainage repaired.

At the Fort Scott, Kans., National Cemetery the windmill and tower and new flagstaff, contracted for during the previous fiscal year, were erected and the lodge and outbuildings repaired.

At the Glendale, Va., National Cemetery the new flagstaff, 75 feet in length, contracted for during the previous fiscal year, was erected and the water supply increased by construction of a well.

At the Hampton, Va., National Cemetery the brick addition to the lodge, for which a contract was made during the previous fiscal year, was completed and necessary repairs made to the water supply.

At the Jefferson Barracks, Mo., National Cemetery the inclosing wall and gates and the lodge and rostrum were repaired and a new wooden flagstaff erected.

At the Little Rock, Ark., National Cemetery necessary repairs were made to the inclosing wall and lodge and a new wooden flagstaff erected.

At the Mound City, Ill., National Cemetery the lodge and outbuildings were repaired and painted and the drainage repaired.

At the Nashville, Tenn., National Cemetery necessary repairs were made to the buildings, the drives and walks properly cared for, and the water supply improved by erection of a new windmill with steel tower.

At the Philadelphia, Pa., National Cemetery necessary repairs were made to the buildings and water supply and the rostrum and flagstaff were painted.

At Quincy, Ill., the remains of the 287 soldiers buried in Woodland Cemetery were removed and reinterred in a plot of ground set apart for that purpose in Graceland Cemetery, near that city, and a new wooden flagstaff, 75 feet in length, provided for the new site. Under an agreement with the Graceland Cemetery Association the soldiers' graves are to be cared for and protected hereafter without expense to the Government.

At the San Francisco, Cal., National Cemetery necessary repairs were made to the buildings and the grounds, walks, and trees kept in good order. During the month of February a wooden structure 20 by 25 feet was erected west of the main gate and north of the iron fence, to be used as a storehouse for the remains of officers and soldiers returned from abroad awaiting claimants and burial. Memorial Day was observed by covering the graves with flowers by citizens, members of the Regular Army and Navy Union, Grand Army of the Republic, and the troops at the Presidio.

At the Soldiers' Home, D. C., National Cemetery the rostrum and flagstaff, damaged by storm August 2, 1899, were repaired, the grounds put in order, and the brick addition to the lodge, contracted for during the previous fiscal year, completed.

At the Springfield, Mo., National Cemetery repairs were made to the lodge and rostrum and a new frame privy erected for public use.

At all other national cemeteries necessary repairs were made and the grounds, walks, and drives kept in good order.

A statement, marked A, showing the expenditures on account of the several national cemeteries during the fiscal year, is submitted herewith.

### REMOVAL OF REMAINS.

During the past fiscal year the remains of officers, enlisted men, and others connected with the United States service were brought to the United States from Cuba, Porto Rico, Honolulu, and the Philippine

Islands, and either sent to relatives or interred in national cemeteries, under authority of acts of Congress approved July 8, 1898, February 9, May 26, and June 6, 1900, as follows:

### FROM CUBA.

| | | |
|---|---|---|
| Identified remains received at New York City on Government transports (disinterred by burial corps) and sent to relatives | | 159 |
| Identified remains received at New York City on Government transports (disinterred by burial corps) and sent to Arlington National Cemetery, Va | | 157 |
| Unknown bodies received at New York City on Government transports (disinterred by burial corps) and sent to Arlington National Cemetery, Va | | 5 |
| Unknown body received at New York City on Government transport from Santiago, Cuba, and sent to Cypress Hills National Cemetery, N. Y | | 1 |
| Identified remains of marines received at New York City on Government transport (disinterred by burial corps) and turned over to navy officials at Brooklyn | | 2 |
| Identified remains received at Newport News, Va., on transport *McPherson* (disinterred by burial corps) and sent to relatives | | 28 |
| Identified remains received at Newport News, Va., on transport *McPherson* (disinterred by burial corps) and sent to Arlington National Cemetery, Va., including one unknown soldier | | 69 |
| Yellow fever bodies stored on island in Santiago Bay in 1899, brought to New New York City on Government transport: | | |
| Identified, sent to relatives | 27 | |
| Identified, sent to Arlington National Cemetery | 27 | |
| Unknown, sent to Arlington National Cemetery | 18 | |
| | | 72 |
| Total bodies returned from Cuba | | 493 |

### FROM PORTO RICO.

| | |
|---|---|
| Identified remains received at New York City on Government transports (disinterred by burial corps) and sent to relatives | 16 |
| Identified remains received at New York City on Government transports (disinterred by burial corps) and sent to Arlington National Cemetery, Va | 20 |
| Civilian remains brought to New York City on Government transport and delivered to friends at pier, not disinterred by burial corps | 1 |
| Total bodies returned from Porto Rico | 37 |

### FROM HONOLULU.

| | |
|---|---|
| The remains of 1 officer and 1 soldier were received at San Francisco, Cal., on Government transport and sent to relatives. Total bodies received from the Hawaiian Islands | 2 |

### FROM PHILIPPINE ISLANDS.

| | |
|---|---|
| Identified remains of officers received at San Francisco, Cal., on Government transports and sent to relatives | 34 |
| Identified remains of officers received at San Francisco, Cal., on Government transports and interred in the national cemetery, Presidio of San Francisco. | 4 |
| Identified remains of officers received at San Francisco, Cal., on Government transports and transferred to Arlington National Cemetery, Va., for interment | 12 |
| Identified remains of enlisted men received at San Francisco, Cal., on Government transports and sent to relatives | 709 |
| Identified remains of enlisted men received at San Francisco, Cal., on Government transports and interred in the national cemetery, Presidio of San Francisco | 454 |
| Identified remains of enlisted men received at San Francisco, Cal., on Government transports and transferred to Arlington National Cemetery, Va, for interment | 12 |
| Identified remains of civilians received at San Francisco, Cal., on Government transports and sent to relatives | 8 |
| Identified remains of civilians received at San Francisco, Cal., on Government transports and interred in the national cemetery, Presidio of San Francisco.. | 14 |

| | | |
|---|---|---|
| Unidentified remains of enlisted men received at San Francisco, Cal., on Government transports and interred in the national cemetery, Presidio of San Francisco | | 15 |
| Remains of navy men received at San Francisco, Cal., on Government transports and turned over to navy officials for transfer to Mare Island Navy-Yard: | | |
| Identified | 6 | |
| Unidentified | 1 | |
| | | 7 |
| Identified remains received at San Francisco, Cal., on Government transports not disposed of at close of fiscal year: | | |
| Officer | 1 | |
| Enlisted men | 86 | |
| Civilian | 1 | |
| | | 88 |
| Total bodies returned from the Philippines | | 1,357 |

One thousand and seventy-three of the above remains were disinterred by burial corps sent to the Philippines from the United States, and the other 284 were the remains of those who either died en voyage and were brought to San Francisco or transported immediately after death without being interred in the Philippines.

The remains of Lieutenant-Commander Carlin of the Navy were received at San Francisco on Government transport and forwarded to Illinois for burial.

### RECAPITULATION.

| Bodies returned from— | |
|---|---|
| Philippine Islands | 1,357 |
| Cuba | 493 |
| Porto Rico | 37 |
| Hawaiian Islands | 2 |
| Total bodies returned | 1,889 |

Burial corps were sent to Cuba, Porto Rico, and the Philippines in charge, respectively, of Solon F. Massey, C. E. Norton, and D. H. Rhodes, and the result of their efforts shows that the work was thoroughly and efficiently done.

The remains of officers and soldiers stored or temporarily interred on the island in Santiago Bay in 1899, a total of 72, were removed to the United States.

Upon returning from the Philippines, after the work of disinterment had been suspended for the time being, it was found impracticable for the burial corps to proceed to exhume the remains of the 39 officers and soldiers which were interred at Honolulu, because of the bubonic plague then prevalent in the Hawaiian Islands. When another burial corps is sent to the Philippines, if circumstances and conditions at that time render it feasible, the remains at Honolulu will be taken up and transported to San Francisco, Cal.

There appeared to be slight, if any, objection on the part of the military authorities in the Philippines to the exhumation and removal of all classes of remains, irrespective of cause of death, and the remains exhumed by the burial corps, as well as those embalmed and transported immediately after death, were those of officers, soldiers, and civilians who died or were killed in action, excepting such as died from smallpox. None of the latter class were transported, because of the regulations of the board of health of the city and county of San Francisco, Cal., prohibiting their entry into or passage through the city, it being dangerous, in their opinion, to the public health.

Respectfully submitted.

W. S. Patten,
*Major and Quartermaster, U. S. A.*

The Quartermaster-General U. S. A.

WAR DEPARTMENT,
QUARTERMASTER-GENERAL'S OFFICE,
*September 15, 1900.*

GENERAL: I have the honor to submit herewith the following report of the operations of the clothing and equipage supply branch of this office for the fiscal year ended June 30, 1900.

This branch, as its name implies, has charge of all the purchases, manufactures, and issues of clothing and equipage required by the Army of the United States and by the militia of the States and Territories.

### RECEIPTS AND EXPENDITURES.

| | |
|---|---|
| The annual appropriation, clothing, and equipage for fiscal year ending June 30, 1900 | $5,952,246.00 |
| Appropriation to supply urgent deficiencies, act of Congress approved February 9, 1900 | 2,000,000.00 |
| To which were credited during the last fiscal year the following amounts: | |
| Reimbursements on account of issues to the militia of the States and Territories | [1]295,790.84 |

---

[1] $10,466.03 of this amount covers reimbursement for militia issues not actually settled by the Treasury Department during the preceding fiscal year.

| | | |
|---|---|---|
| Collections by Pay Department on account of clothing drawn by the enlisted men in excess of their allowance; also from sales to officers, to the militia, and surveying expeditions, authorized by law | | $233,114.99 |
| Total | | 8,481,151.83 |
| The remittances to officers of the Quartermaster's Department at the general depots and elsewhere for the purchase and manufacture of clothing and equipage, and other expenditures chargeable to appropriations above named | $5,626,195.33 | |
| Requisitions issued on settlements made at Treasury of accounts and claims | 133,333.85 | |
| Total | | 5,759,529.18 |
| Leaving balance of | | 2,721,622.65 |

available in the Treasury of the United States on June 30, 1900, which will be further drawn upon to pay obligations entered into prior to the close of the fiscal year.

### REMITTANCES.

There were remitted to officers of the Department during the last fiscal year, from the available funds in the Treasury of the United States, on account of clothing and equipage, the following:

| | |
|---|---|
| Depot at Philadelphia, Pa | $2,722,628.94 |
| Depot at New York | 1,112,883.03 |
| Depot at San Francisco, Cal | 832,013.82 |
| Depot at Washington, D. C | 150,750.00 |
| Depot at Jeffersonville, Ind | 143,655.16 |
| Depot at St. Louis, Mo | 8,866.14 |
| Chief quartermaster, Department of the East (including Boston depot) | 114,389.21 |
| Chief quartermaster, Department of the Lakes (including Chicago depot) | 318,463.17 |
| Chief quartermaster, Division of the Philippines | 161,200.00 |
| Other departments, depots, posts, camps, and transports | 61,345.86 |
| Total | 5,626,195.33 |

### COLLECTIONS AND DISBURSEMENTS BY PAY DEPARTMENT.

The collections by the Pay Department from the enlisted men of the Army on account of clothing and equipage drawn in excess of their allowances from April 1, 1899 (the date referred to in my last annual report), to March 31, 1900, and which were placed to the credit of the appropriation for clothing and equipage, amounted to $251,683.67.

The money paid by said department to enlisted men of the Army upon their discharge from the service of the United States, from April 1, 1899, up to and including March 31, 1900, on account of clothing undrawn, amounted to $1,383,127.88.

Comparing these two items, it will be seen that the established clothing money allowance is ample.

### STATUS OF CLOTHING AND EQUIPAGE SUPPLIES.

The accompanying consolidated Statement A shows in detail the quantities of the various articles of clothing and equipage supplies on hand at the general depots of the Quartermaster's Department in the United States on July 1, 1899, the quantities purchased, manufactured, sold, and issued to the Army at home and for the troops stationed abroad, as well as the issues to the militia of the States and Territories, during the last fiscal year, and the quantities remaining on hand June 30, 1900.

Statement B shows in detail the quantities of clothing and equipage supplies on hand at the depots in Manila, Porto Rico, Cuba, and Hawaii July 1, 1899, the quantities purchased, sold, and issued to the troops in said islands during the last fiscal year, and the quantities available for issue on the 1st of July, 1900.

### PURCHASE AND MANUFACTURES.

The following is a résumé of the principal articles of clothing, equipage, and materials that were purchased and manufactured at the general depots during the past fiscal year:

| White drill ... yards | 35,858 |
| Total value, United States currency | $220,718.91 |

Reports received indicate that no purchases of clothing and equipage supplies were made in Cuba, Porto Rico, and Hawaii.

## MANUFACTURES OF TENTS BY POST-OFFICE DEPARTMENT.

There were manufactured at the mail bag repair shop of the Post-Office Department, in this city, for this department, during the past fiscal year, 4,018 conical wall tents. All the materials required in their manufacture were furnished from the Philadelphia depot, or purchased by the depot quartermaster in this city. The cost of labor in making them amounted to $22,459.01.

As the demand for tentage from the Army has been reduced to a considerable extent, it was found that its manufacture in this city could be dispensed with, and consequently the Post-Office authorities were advised of such fact. The Department is now able to manufacture all the tents required at the Philadelphia depot.

---

[1] Record of the entire year has not been furnished, due to change of purchasing officers.

### ISSUES TO THE ARMY.

The following are the quantities of the principal articles of clothing and equipage that were issued to the Army of the United States during the last fiscal year, viz:

### TO TROOPS STATIONED IN OR PRIOR TO THEIR DEPARTURE FROM THE UNITED STATES.

### CLOTHING AND EQUIPAGE SUPPLIES FOR TROOPS IN ALASKA.

The troops ordered to duty in Alaska have been fully equipped for Arctic service. They were furnished, in addition to their regulation winter clothing, with the following articles, viz:

Southwester hats.
Fur caps.
Fur gauntlets.
Mackinaw overcoats.
Oilskin coats.
Oilskin trousers.
Buckskin gloves.
Buckskin mittens.
Moccasins.
German socks.
Shoe pacs.
Sweaters.

The cost of this extra supply of clothing, per man, was about $30, and, upon the recommendation of this office, the Secretary of War has authorized the above sum to be added to the already established allowance of each of the enlisted men serving in the Department of Alaska.

### CLOTHING AND EQUIPAGE SUPPLIES FOR TROOPS IN CHINA.

Although not pertaining to the operations of the Quartermaster's Department for the last fiscal year, nevertheless it is deemed to be of sufficient importance to give the matter of the supply of clothing and equipage for the troops of the United States, ordered to or expected to be stationed in China, a passing notice.

There were sent to the depot at Taku, China, from the depot at San Francisco, the following:

| | | | |
|---|---|---|---|
| Wool blankets | 16,000 | Stockings: | |
| Blouses, lined | 16,000 | Cotton, heavy ........do | 44,000 |
| Caps: | | Wool, heavy ........do | 36,000 |
| Canvas | 10,000 | Trousers: | |
| Fur | 4,000 | Kersey, foot, heavy ...do | 16,000 |
| Assortment of chevrons. | | Mounted, kersey, heavy pairs | 4,500 |
| Canton flannel drawers..pairs | 40,000 | Trousers stripes, assorted. | |
| Gauntlets, fur ........do | 10,000 | Undershirts, wool, heavy | 27,000 |
| Gloves, wool ........do | 22,000 | Overcoats, canvas | 2,000 |
| Hats, campaign | 12,000 | Hat cords | 17,400 |
| Overcoats: | | Conical wall tents, complete for commissary department | 5 |
| Artillery | 1,500 | Hospital tents, complete for commissary department | 3 |
| Cavalry | 3,500 | Wall tents, complete for commissary department | 5 |
| Infantry | 11,000 | Hospital tents, complete for medical department | 250 |
| Overshoes: | | Asbestus tent rings | 3,000 |
| Arctic, one-buckle ..pairs | 11,000 | | |
| Standard ........do | 5,000 | | |
| Ponchos | 12,000 | | |
| Shirts, dark blue flannel | 25,000 | | |
| Shoes, black calfskin ....pairs | 20,000 | | |

| | |
|---|---|
| Tent stoves | 1,400 |
| Joints, tent stovepipe | 7,000 |
| Veto stoves and extra parts for use with conical tents | 1,000 |
| Fire pots, with grates, rings, and legs, arranged for consuming coal in conical tent stoves | 1,505 |
| Axes | 1,000 |
| Ax helves | 3,000 |
| Hatchets | 1,000 |
| Hatchet helves | 3,000 |
| Camp kettles | 500 |
| Mess pans | 1,000 |
| Pickaxes | 500 |
| Pickax helves | 1,000 |
| Shovels: | |
| Long handle | 500 |
| Short handle | 500 |
| Spades | 400 |
| Tents: | |
| Common, complete | 500 |
| Conical, complete | 500 |
| Hospital, complete | 150 |
| Wall, complete | 200 |

| | |
|---|---|
| Tent pins: | |
| Large, extra | 3,000 |
| Small, extra | 15,000 |
| Hand litters | 100 |
| Wall tents for medical department | 50 |
| Mosquito bars | 6,000 |
| Extra grates and legs for fire pots ... each | 250 |
| Buckskin gauntlets ... pairs | 3,000 |
| Iron tent pins: | |
| Large | 6,000 |
| Small | 1,000 |
| German socks ... pairs | 5,000 |
| Overcoats for hospital corps | 545 |
| Cloth chevrons for hospital corps ... pairs | 100 |
| Brassards for hospital corps | 50 |
| Trousers stripes for hospital corps ... pairs | 575 |
| Bed sacks | 6,000 |

Also such number of hospital flags, camp colors, and ambulance guidons as deemed necessary.

The above includes 250 hospital and 50 wall tents for the exclusive use of the Medical Department.

According to cable advices, there were also sent to Taku, from the available supplies at Manila, unlined blouses; trousers, foot, kersey; cotton stockings and wool undershirts sufficient for 5,000 troops; also 1,000 pairs drawers.

In addition to the foregoing, there were also shipped to Nagasaki, for use of the medical department, 200 complete hospital tents and sufficient clothing for use of enlisted men of the hospital corps.

The climate of that part of China in which the United States troops were expected to operate being very cold in winter, special precautions were taken to provide an adequate supply of extra-warm clothing and heating stoves. Considering that the regulation conical-tent stoves are adapted only to burning wood, and owing to the reported scarcity of this class of fuel in the country referred to, this office devised a cast-iron fire pot and grate, suitable for soft coal, to be placed inside of the conical-tent stove. Experiments with Japanese coal demonstrated that the same answered the purpose fully. Fifteen hundred of these pots have been procured and ordered to be shipped. It is believed that the fire pot, an illustration of which is submitted herewith, will in the future prove a valuable adjunct to the equipment of the Army.

### ISSUES TO THE MILITIA.

There were issued to the governors of the several States and Territories and to the commanding general District of Columbia militia, under the provisions of the act of Congress of July 1, 1887, making an annual appropriation for the support of the militia of the States, etc., articles of clothing, equipage, and other quartermaster stores, for which the several appropriations of the Quartermaster's Department have been reimbursed, viz:

| States and Territories. | Clothing and equipage. | Regular supplies. | Total. |
|---|---|---|---|
| Alabama | $7,570.55 | | $7,570.55 |
| Arizona | 646.40 | $16.74 | 663.14 |
| Arkansas | 1,240.15 | | 1,240.15 |
| California | 9,857.40 | | 9,857.40 |

| Washington | 2,836.00 | | 2,836.00 |
| West Virginia | 2,820.87 | | 2,820.87 |
| Wisconsin | 4,158.50 | 8.23 | 4,166.73 |
| Wyoming | 2,562.19 | | 2,562.19 |
| Total | 285,324.81 | 1,071.79 | 286,396.60 |

There were also issued to the commanding general District of Columbia militia, during the fiscal year ended June 30, 1900, under the act of Congress approved March 1, 1889, and for which this Department will not be reimbursed, the following quartermaster's supplies, viz:

| | |
|---|---|
| Clothing and equipage | $3,982.12 |
| Regular supplies | 463.03 |
| Total | 4,445.15 |

## SALES TO THE MILITIA.

Under the act of Congress approved February 24, 1897, the Department is authorized to sell to the governors of the States and Territories such supplies as the Secretary of War may authorize, provided the same can be spared. Under this authority there were sold during the past fiscal year, at the regulation prices for cash, clothing and equipage supplies to the following amounts:

| State. | Clothing and equipage. | Packing charges. | Total. |
|---|---|---|---|
| California | $450.00 | $0.54 | $450.54 |
| Georgia | 106.41 | | 106.41 |
| Idaho | 387.76 | 1.08 | 388.84 |
| Nebraska | 3.66 | | 3.66 |
| New Hampshire | 152.00 | 1.69 | 153.69 |
| Pennsylvania | 3,010.50 | 8.88 | 3,019.38 |
| Total | | | 4,122.52 |

Under the act of Congress approved March 15, 1898, the cost of all stores and supplies sold to any State or Territory is credited to the appropriation from which they were procured, thereby enabling the Department to replace the supplies.

### RETURN TO THE STATES AND TERRITORIES OF QUARTERMASTER'S SUPPLIES, CARRIED BY VOLUNTEERS INTO THE UNITED STATES SERVICE DURING THE WAR WITH SPAIN.

The act of Congress making appropriation for the support of the Regular and Volunteer Army for the fiscal year 1900–1, authorizes the Secretary of War, on application of the governor of any State or Territory, to replace the Quartermaster's supplies which the volunteers from said State or Territory carried into the service of the United States Army during the recent war with Spain and which have been retained by the United States, exclusive of such supplies as have been allowed for in the office of the Auditor for the War Department and such award accepted by a State.

In order that the intent of the act of Congress quoted may be fully determined, so that a uniform adjustment of the several claims arising thereunder may be made, the Secretary of War, upon the recommendation of this office, on the 18th of June, 1900, obtained the following opinion from the Judge-Advocate-General of the Army upon the matter, which was approved by the Secretary of War on the day following, viz:

1. That the act applies not only to stores brought into the United States service by volunteers from supplies furnished the States or Territories under the annual militia appropriation, but also supplies purchased by the States and Territories for which no claim has been allowed and accepted.
2. The act authorizes the property to be replaced, article for article, irrespective of its condition at the time it was accepted into the service of the United States.
3. The act does not require the article to be strictly new, but that issues can be made of tentage which has been used somewhat, but is still in a perfectly serviceable condition.

Several claims have already been presented, and after correspondence with the Auditor for the War Department and verification of the items claimed by comparison with the property returns on file in this office, the Secretary of War has authorized settlement in accordance with existing facts.

A complete statement regarding the settlement of this class of claims, as they may arise from time to time, will form part of the next annual report of the clothing-supply branch.

### CLOTHING FOR DISCHARGED PRISONERS.

There were remitted during the last fiscal year, to various officers, under the act of Congress approved March 16, 1896, the sum of $7,395 for the purpose of furnishing one suit of outer clothing to each discharged prisoner, upon release from confinement, under sentence of a general court-martial, at a cost of not to exceed $10 per suit.

### ISSUES TO INDIAN PRISONERS OF WAR.

This Department supplies to the Apache Indian prisoners of war (men, women, and children), kept at Fort Sill, Okla., under military jurisdiction, such articles of clothing and other quartermaster's supplies as are necessary for their well-being. The value of the stores of all kinds furnished is as follows:

| | |
|---|---|
| Clothing and equipage | $4,930.14 |
| Regular supplies | 3,618.37 |
| Army transportation | 746.00 |
| Incidental expenses | 1,200.00 |
| Total | 10,494.51 |

### SALES TO GEOLOGICAL SURVEY.

There were transferred to the Director of the United States Geological Survey, under the provisions of section 3692 of the Revised Statutes, for use by surveying parties in the field, under authority of the Secretary of War, tents to the value of $232.04, for which the Department has been reimbursed.

### SALES OF CONDEMNED CLOTHING AND EQUIPAGE.

There was realized from sales at the general depots of this Department, of condemned clothing, equipage, and cuttings, during the past fiscal year, the sum of $57,177.24. The expenses of the sales amounted to $465.91, which deducted from the gross receipts net the sum of $56,701.33, which was covered into the Treasury of the United States, credited to miscellaneous receipts.

### SALES TO NAVY DEPARTMENT AND UNITED STATES MARINE CORPS.

At the request of the Navy Department, and with the approval of the Secretary of War, there were sold to said Department, in connection with the equipment of United States ships, ponchos, tents, etc., to the value of $4,100.61.

Sales of hats and other articles of clothing and equipage supplies to the value of $485 were also made to the quartermaster of the United States Marine Corps, required for immediate use of troops in the Philippines.

### TRANSFER OF EQUIPAGE TO NATIONAL HOME FOR DISABLED VOLUNTEERS.

There were transferred to the governor of the National Home for Disabled Volunteers, at Hampton, Va., in August, 1899, during the prevalence of the yellow fever epidemic, certain tents and mattresses, of which the following were not returned, viz:

| | |
|---|---|
| Hospital tents | 200 |
| Common tents | 150 |
| Mattresses | 389 |

The tents when transferred were not in an entirely new condition. The money value of the property, as determined, was $5,363.30, and this amount has been placed to the credit of the Treasurer of the United States by the president of the Board of Managers of the National Home for Disabled Volunteers.

### CLOTHING AND EQUIPAGE SUPPLIES.

The supplies procured during the past fiscal year, it is confidently believed, have been of a quality conforming to standards and specifications. The greatest care has been exercised to bring about this result. All the demands made upon the Department were promptly met. A constant vigilance is being exercised to replenish stock whenever necessary, and all accumulation of articles not likely to be needed is carefully guarded against.

### INSPECTION OF CLOTHING AND EQUIPAGE SUPPLIES RECEIVED UNDER CONTRACTS.

With the largely increased purchases of supplies under contracts, and the demands of merchants and manufacturers residing in the East and West, it has been decided, as far as the interests of the public service warrant, to establish subpurchasing depots in the cities of Boston and Chicago, in addition to those in the cities of Philadelphia, New York, and San Francisco.

As matters now stand proposals for Eastern deliveries are principally invited at the Philadelphia, Boston, and Chicago depots. Care is taken to fully acquaint prospective bidders with the character and quality of the goods advertised for. Bids are opened simultaneously at the three depots named, so that the competition must absolutely be a fair one, and awards are made to the lowest responsible bidders, regardless of place of delivery. No charge of discrimination against bidders residing in different sections of the country can therefore be sustained against this Department.

The supplies for the troops on the Pacific coast, and also considerable quantities for shipment to troops in the Philippines and China are procured in the city of San Francisco, from time to time, as demands and circumstances require.

While the purchases were principally confined to the Philadelphia and San Francisco depots, no difficulties in the inspection of the goods by the well-organized corps of inspectors were encountered. But the sudden change from two to five depots necessitated a reorganization of the entire inspection department, which is now in progress.

There is no question but that the inspection at our depots must be uniform in every respect. An article rejected for good and sufficient reason at one depot should not be accepted if offered at another. At present samples of deliveries made at Chicago and Boston are sent to the Philadelphia depot for examination by the experts there. This course, as will readily be seen, involves great delays to which contractors should not be subjected. The latter can not be held to a proper fulfillment of the terms of delivery agreed upon.

These difficulties must be overcome, and I see no other remedy than to create a separate inspection department, to be placed under the direct control of this office.

Inspectors representing the various industries, such as leather, woolen and cotton textile fabrics, knit goods, iron products, tentage, etc., should have an expert representative on duty in this office under the direct control of the Quartermaster-General.

A corps of experienced inspectors, carefully selected, should be placed under the supervision of these experts, and ordered from depot to depot wherever their services are required. No inspector should remain on duty at any one depot for an indefinite length of time.

I believe that if this suggestion is in principle carried out, the interests of both the Government and contractors will be greatly promoted. The details may well be left to a board of officers to be specially appointed to consider this most important matter. The necessary rules and regulations to govern the inspection department of this office should also be prescribed by said board.

## IMPROVEMENTS AND CHANGES IN THE UNIFORM.

### WHITE SUMMER CAPS FOR OFFICERS.

Heretofore the white summer caps prescribed for officers were made according to the fancy of each individual manufacturer. In many cases lightness was entirely lost sight of. To remedy this a pattern cap, of lightest possible construction, was prepared by direction of this office, consisting of a skeleton frame and suitable covers. To make the cap more attractive, provision was made for cap cords, to be worn as follows:

General officers, of gold lace, about ⅜-inch wide.
Officers of the general staff and staff corps, of gold bullion, ⅛-inch diameter.
Officers of the line, of silk, ⅛-inch diameter, of color of arm of service.

The Secretary of War having approved this sample, it has been adopted as the standard of the Army.

### INSIGNIA FOR REGIMENTAL, SQUADRON, AND BATTALION STAFF OFFICERS.

Under existing regulations the staff officers of regiments, squadrons, and battalions can not be distinguished from company and other officers of regiments.

This office therefore directed the preparation of suitable insignia to be worn on the undress and khaki coats of the officers referred to, which, it is thought, would fully accomplish the object sought.

After consideration by the equipment board, the Secretary of War, upon the recommendation of this office, approved these insignia, which consist of the regulation crossed rifles, sabers, and cannon, with the numbers of the respective regiments in the upper angle and the devices of the respective staff corps (shield for adjutants, wheel surmounted by an eagle for quartermasters, and crescent for commissaries) in the lower angle. In the case of adjutant and quartermaster of the battalion of engineers the insignia to be above the center turret.

Standard samples have been prepared, and draft of a general order submitted for promulgation.

### KHAKI CLOTHING.

Since submitting my last annual report, the quality of the khaki material for field uniforms has been greatly and steadily improved. A new standard, and specifications conforming thereto, have been adopted. It is of domestic production, possesses great strength, is water-repellent, and the dye is fast and stands the prescribed tests, such as exposure to sunlight, boiling in solutions of soap and carbonate of soda, and steeping in peroxide of hydrogen 10 volumes strength.

Constant improvements have also been made in the manufacture of the khaki coats and trousers, and it is believed that they are as near perfect as they can be produced, both as to fit and workmanship. The attention of this office having been called to the advisability of supplying the mounted troops stationed in tropical countries with

### RIDING BREECHES,

samples were made and referred to the officers on duty at Fort Myer, Va., for an expression of opinion. Report was made that nearly all the officers and men recommended their adoption. Upon reference of the matter to the Secretary of War, authority was granted to manufacture sufficient of these trousers to equip six troops of cavalry, for trial in active service, the question of final adoption to depend upon reports upon the result of said trial. Five hundred and eighty-seven pairs of these breeches have been manufactured at the New York depot, and are about ready for distribution.

### LEGGINGS.

New specifications, providing that the leggings hereafter to be procured shall be of fast khaki color, of same shade as the khaki coats and trousers, have also been adopted.

### KHAKI SHIRTS.

On the 21st day of September, 1899, the first steps were taken by this office to provide khaki-colored cotton shirts in lieu of the chambray shirts heretofore procured. Samples were submitted to the Secretary of War, who, on the 10th of January last, authorized the change. A supply of shirting material has since been contracted for and manufactures commenced.

### DARK BLUE FLANNEL SHIRTS.

The attention of the Department having been called to the fact that the dark blue flannel shirts, when worn in campaign, offered a very conspicuous mark to the enemy, some of the khaki-colored cotton shirts have been sent to Fort Myer, Va., where experiments are about to be conducted, both as to distances, light, and weather conditions. Should it be found that the dark blue color is really objectionable, steps will be taken at once to adopt wool flannel shirts of khaki color. It is believed that no difficulty in securing an all-wool flannel of fast color will be experienced.

### BELT STRAPS FOR TROUSERS.

With the adoption of leather waist belts it has become necessary to provide all the kersey trousers hereafter to be issued with suitable belt straps.

### LEATHER GLOVES FOR ARTILLERYMEN.

The attention of this Department having been called to the necessity of providing the enlisted men of the artillery arm serving in seacoast defenses with suitable leather gloves to protect their hands while handling the heavy guns, machines, and appliances, samples of gloves were procured, and after consultation with the Chief of Ordnance of the Army the Secretary of War, to whom the case was submitted, authorized the procurement and issue of asbestus horsehide gloves, cost price to be charged to the enlisted men, without, however, increasing their clothing-money allowance.

### STRAW HELMETS.

Under existing regulations the enlisted men of the Army are permitted to wear, during the warm season, on fatigue and stable duty, at target practice and when not on duty, straw hats of such pattern as may be prescribed by department commanders. It having been reported that the foregoing resulted in a lack of uniformity, a limited number of straw helmets, costing 25 cents each, were procured and issued to some of the troops at a few of the southern stations in the United States. Reports indicate that these helmets do not seem to meet with favor.

### NANKEEN UNDERWEAR.

Demands from Manila for nankeen undershirts and drawers necessitated the continued purchase of these articles, and in order to bring about uniformity of purchases in the East as well as on the Pacific coast this office adopted standards and specifications.

### CHEVRONS FOR SHIRTS.

The clothing regulations permit the wearing of chevrons by noncommissioned officers on the sleeves of their shirts. Neat and suitable samples have also been adopted and a limited supply has been ordered to be manufactured. The Department is now ready to supply the same whenever called for.

### CLOTHING FOR THE TRANSPORT SERVICE.

The Quartermaster's Department furnishes to such of the officers and enlisted men of the United States Army transport service as may desire to avail themselves thereof such of the prescribed uniform clothing of said service, at cost prices, to be deducted from their pay, as they may need.

As these supplies must be bought either at the New York or San Francisco depot it was found necessary to secure sets of each article, so that the purchases may be uniform. Samples have been adopted and are about to be distributed to the depots named.

### KHAKI-COLORED DUCK FOR TENTS.

Experiments have been made with duck for tents by having a quantity dyed of same shade as the khaki material. A tent made therefrom was erected in January last. It has been exposed to snow, rain, and sunshine, and after nine months it is found that the tent has retained its color, is still good, strong, and fit for service, and that not a sign of mildew has made itself manifest. It has therefore been decided that the duck needed for future manufactures of tents shall conform to this color and be of the same fast dye.

### MUNSON'S IMPROVED TENTS.

Capt. Edward L. Munson, assistant surgeon, U. S. A., having invented and patented a hospital tent specially adapted for service in tropical countries, this Department, by authority of the Secretary of War, manufactured for trial in active service 100 of these tents, nearly all of which have been distributed.

A few reports have thus far been received which indicate that the tents are more comfortable than the regulation hospital tent. Captain Munson has waived payment of royalty or other remuneration on any tents that have been or may hereafter be constructed for use of the United States Army.

### LAY FIGURES EXHIBITING KHAKI FIELD UNIFORMS.

Orders have been given to construct a group of four figures showing to the visitors of the War Department building the khaki and field uniforms and equipments of our Army in the Philippines. A similar group will also be procured for exhibit in the clothing museum of the Philadelphia depot.

### ILLUSTRATIONS OF ARMY UNIFORMS.

Steps have also been taken to procure additional illustrations of the uniforms of the Army, so as to bring the work containing the illustrations from 1774 up to date. These illustrations will consist of one plate, showing the present undress uniform of officers and enlisted men; one plate will illustrate the khaki field uniform of officers and another plate will show the khaki field uniform of the enlisted men. It is the intention to produce these plates in the same artistic manner as those heretofore published.

### OAK TANNAGE.

Manufacturers of leather on the Pacific coast having called the attention of the Department to their product known as California oak and asked that the same be placed on an equal footing with leather of Eastern oak-bark tannage, this Department has willingly undertaken the task of ascertaining the relative merits of these two tannages.

The standard sample shoes which were manufactured in the East are made exclusively of leather tanned with Eastern oak bark, and bidders on the Pacific coast could not, therefore, submit bids upon shoes made of leather tanned with California oak bark.

Upon investigation it was ascertained that Eastern manufacturers strongly advised against the use of California oak leather, pointing out that its wearing qualities were inferior to that of the Eastern product, and that, on account of its red color, it would be dangerous to permit its use in view of the difficulty in distinguishing the same from hemlock or union (hemlock and oak) leather.

The latter reason should not be considered, inasmuch as the Department is fully able to protect itself from fraud. In order to ascertain the wearing qualities of California oak-tanned leather this Department has authorized the manufacturers in San Francisco, to whom contracts for furnishing 75,000 pairs of shoes were recently awarded, to use the California product. Actual service will soon demonstrate whether the adverse criticism is based upon facts.

One hundred pairs of California oak-tanned shoes have also been sent from San Francisco to West Point, N. Y., where they will be submitted to a careful comparative service test. Other experiments are also in progress, and the subject will receive an exhaustive investigation.

### CONCLUSION.

The clerical work connected with the clothing-supply branch has been kept up to date, due to a faithful performance of duty on the part of the clerical force, which is composed of six clerks.

Very respectfully,

W. S. PATTEN,
*Quartermaster, U. S. A.*

The QUARTERMASTER-GENERAL, U. S. A.

A.—*Statement showing articles of clothing and equipage and material on hand at the issuing depots of the Quartermaster's Department June 30, 1899; the quantities purchased, manufactured, received from posts and depots, taken up, sold, transferred to general depots, expended, issued to the Army and the militia, and the quantities remaining in depots June 30, 1900.*

WAR DEPARTMENT,
QUARTERMASTER-GENERAL'S OFFICE,
*Washington, D. C., September 20, 1900.*

GENERAL: I have the honor to submit the following report of the construction and repair division of this office for the fiscal year ended June 30, 1900:

| | |
|---|---|
| Congress, in the act making appropriations for the support of the Army for the fiscal year 1899-1900, provided under the head of "Barracks and quarters" | $3,000,000 |
| And in the urgent deficiency act approved February 9, 1900, there was appropriated under the head of "Barracks and quarters" | 1,000,000 |
| Total | 4,000,000 |

The appropriation of $1,000,000 above referred to was made with the proviso—

> That from the foregoing amount, if in the judgment of the Secretary of War the emergency exists, the sum of $130,000, or so much thereof as in his discretion may be necessary, shall be used for the purchase of a site or sites for the location of barracks for the accommodation of a garrison in charge of fortifications.

Expenditures have been made or authorized from these funds as follows:

| | |
|---|---|
| Authorized for construction and repair of buildings at Army posts and depots | $2,051,841.12 |
| Expended for temporary buildings, tent floors, etc., at camps in the United States | 88,201.63 |
| Expended for material and labor to construct shelter for troops in Cuba, Porto Rico, Alaska, and the Philippines, so far as reported | 668,520.46 |
| Expended for rents and lodgings in connection with the recruiting service (Appendix A) | 67,519.15 |
| Expended for rent of storehouses, offices, barracks, quarters, camp ground, etc. (Appendix B) | 258,290.89 |
| Expended in payment of employees (Appendix C) | 6,539.09 |
| Expended for purchase of land near Galveston, Tex., for site of new post, Fort Crockett | 126,000.00 |
| Balance June 30, 1900 | 733,087.66 |
| Total | 4,000,000.00 |

*Recapitulation of expenditures authorized from the appropriations for "Barracks and quarters, 1899–1900," for the construction and repair of buildings at permanent posts and depots.*

| Department, depot, etc. | Construction. | Repairs. | Total. |
|---|---|---|---|
| Department of the East | $819,631.71 | $204,094.17 | $1,023,725.88 |
| Department of the Lakes | 17,877.25 | 102,639.89 | 120,517.14 |
| Department of Texas | 85,941.50 | 65,366.15 | 151,307.65 |
| Department of Dakota | 10,961.01 | 66,338.84 | 77,299.85 |
| Department of the Missouri | 240,885.63 | 170,960.89 | 411,846.52 |
| Department of the Colorado | 16,225.55 | 62,389.99 | 78,615.54 |
| Department of California | 45,126.72 | 45,133.19 | 90,259.91 |
| Department of the Columbia | 32,021.53 | 16,195.40 | 48,216.93 |
| Jeffersonville depot | 14,477.20 | 3,809.00 | 18,286.20 |
| New York depot | | 933.90 | 933.90 |
| Philadelphia depot | 20,515.00 | 3,198.57 | 23,713.57 |
| St. Louis depot | | 2,281.15 | 2,281.15 |
| Fort Totten | | 4,695.88 | 4,695.88 |
| Hot Springs Army and Navy Hospital | | 141.00 | 141.00 |
| Total | 1,303,663.10 | 718,178.02 | 2,051,841.12 |

The following list shows the different buildings which have been authorized to be constructed at the various posts, the cost thereof being included in the foregoing statement under the head of "Construction."

### MILITARY POSTS APPROPRIATION.

"For the construction of buildings at, and the enlargement of such military posts as in the judgment of the Secretary of War may be necessary, and for the erection of barracks and quarters for the artillery in connection with the adopted project for seacoast defense," the act making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1900, appropriated $670,000.

The law provided that of this sum there might be used for the purchase of suitable building sites $100,000.

It was further provided that there should be used "for the erection of barracks, quarters, gun sheds, and stables for one battery of light artillery at Fort Leavenworth, Kans.," $50,000.

The following table shows the amounts apportioned to each post for purchase of land and construction of buildings from this appropriation:

| Post. | Buildings, etc. | Material. | Allotments. | Total. |
|---|---|---|---|---|
| Fort Adams, R. I | Dormitories over and remodeling casemates. | Brick | $56,240.00 | |
| | Plumbing | | 9,843.00 | |

| | Total | | | 670,000.00 |

## APPROPRIATION FOR HOSPITALS.

In the "act making appropriation for the support of the Regular and Volunteer Army for the fiscal year ending June 30, 1900," Congress appropriated "for construction and repair of hospitals at military posts already established and occupied, including the extra duty pay of enlisted men employed on the same, and including also all expenditures for construction and repairs required at the Army and Navy Hospital at Hot Springs, Ark., except quarters for the officers, $275,000: *Provided*, That $25,000 of the foregoing amount be expended in the construction of an addition to the Army and Navy Hospital at Hot Springs, Ark., making thereby a new ward to accommodate fifty beds." Based on estimates approved by the Medical Department, the remaining $250,000 has been apportioned as follows:

| Post. | Amount. |
|---|---|
| *Department of the East.* | |
| Fort Adams | $19,969.07 |
| Fort Barrancas | 791.15 |
| Fort Banks | 26.80 |
| Fort Caswell | 71.13 |
| Fort Columbus | 237.70 |

## APPROPRIATION FOR HOSPITAL STEWARDS' QUARTERS.

In the Army appropriation act for the fiscal year ending June 30, 1900, Congress also appropriated $20,000 for construction of quarters for hospital stewards at military posts already established and occupied, including the extra-duty pay of enlisted men employed on the same. This sum has been apportioned to the posts named below:

| Post. | Amount. | Post. | Amount. |
|---|---|---|---|
| Fort Adams | $210.93 | Angel Island | $3,276.76 |
| Fort Barrancas | 137.15 | Fort Mason | 77.87 |
| Fort Columbus | 67.50 | Presidio of San Francisco, Cal | 219.50 |

## CONSTRUCTION OF HOSPITALS AND HOSPITAL STEWARDS' QUARTERS.

The following is a list of new buildings authorized to be constructed at various posts. The cost of construction, plumbing, and gaspiping, or electric wiring of these buildings (except the additional ward at Hot Springs, Ark.) is included in the foregoing tables of appropriations for hospitals and hospital stewards' quarters, the cost of heating apparatus for hospitals being defrayed from the appropriation for regular supplies. Of the buildings enumerated, the new hospitals at Fort Adams, Madison Barracks, and Fort Sill, the additions to hospital at Fort Porter, the deadhouse at Fort Sill, the stewards' quarters at Fort Monroe and Hot Springs, and the addition to stewards' quarters at Fort Myer have been reported completed.

| Post. | Designation. | Material. | Amount authorized. |
|---|---|---|---|
| Fort Adams, R. I | Hospital for 24 beds | Brick | $17,562.50 |
| | Plumbing | | 1,300.00 |
| | Gas piping | | 105.00 |
| Madison Barracks, N. Y | Hospital for 24 beds | Brick | 15,250.00 |
| | Plumbing and gas piping | | 1,300.00 |
| Fort McHenry, Md | Mortuary and disinfecting plant | | 856.00 |
| Fort Terry, N. Y | Hospital for 12 beds | Brick | 18,300.00 |
| | Plumbing | | 655.00 |
| | Gas piping | | 150.00 |
| Fort Porter, N. Y | Additions to hospital | Brick | 7,500.00 |
| | Plumbing | | 617.00 |
| | Gas piping | | 24.00 |
| Fort Preble, Me | Hospital for 12 beds | Brick | 18,700.00 |
| | Plumbing | | 1,205.00 |
| Fort Wadsworth, N. Y | Deadhouse | Brick | 2,086.00 |

| Post. | Designation. | Material. | Amount authorized. |
|---|---|---|---|
| Washington Barracks, D. C | Addition to main building of general hospital | Brick | $11,270.00 |
| | Plumbing | | 750.00 |
| | Gas piping | | 210.00 |
| | Electric wiring in hospital buildings | | 300.00 |
| Fort Williams, Me | Hospital for 12 beds | Brick | 18,745.00 |
| | Plumbing | | 1,255.00 |
| Fort Crook, Nebr | Deadhouse | Brick | 2,100.00 |
| | Plumbing | | 214.00 |
| | Gas piping | | 8.00 |
| Fort Leavenworth, Kans | Hospital for 48 beds | Brick | 52,432.00 |
| | Plumbing | | 6,197.00 |
| | Wiring | | 1,000.00 |
| Fort Sill, Okla | Hospital for Apache prisoners | Frame | 1,040.24 |
| Hot Springs Army and Navy Hospital. | New kitchen and alterations in mess room | Brick | 9,076.46 |
| | Plumbing | | 1,023.28 |
| | Gas piping | | 112.00 |
| San Juan, P. R | Laundry building for general hospital | | 1,000.00 |
| Cayey, P. R | Temporary hospital building | | 1,500.00 |
| | Total for new buildings from the general hospital appropriation. | | 193,843.48 |
| Hot Springs Army and Navy Hospital. | Additional ward | Brick | 22,823.50 |
| | Plumbing | | 1,572.00 |
| | Gas piping | | 55.00 |
| | Total from special appropriation | | 24,450.50 |
| Fort Monroe, Va | 1 set hospital stewards' quarters | Brick | 2,277.00 |
| | Plumbing | | 160.00 |
| | Gas piping | | 25.00 |
| Fort Myer, Va | Addition to hospital stewards' quarters | Brick | 700.00 |
| Fort Snelling, Minn | 1 set hospital stewards' quarters | do | 2,600.00 |
| | Plumbing | | 155.00 |
| | Gas piping | | 15.00 |
| Fort McDowell, Cal | 1 set hospital stewards' quarters | Brick | 2,964.00 |
| | Plumbing | | 200.00 |
| | Gas piping | | 75.00 |
| Hot Springs Army and Navy Hospital. | 1 set hospital stewards' quarters | Brick | 2,350.00 |
| | Plumbing | | 200.00 |
| | Gas piping | | 20.00 |
| Washington Barracks, D. C | 1 set hospital stewards' quarters | Brick | 3,172.00 |
| | Total for new buildings from hospital stewards' quarters appropriation. | | 14,913.00 |

## ARMY TRANSPORTATION APPROPRIATION.

The following aggregate expenditures have been authorized or reported:

| | |
|---|---|
| For structural water supply, sewerage and drainage, and for a portion of the plumbing work | $524,732.33 |
| For roads, walks, grading, bridges, etc | 180,195.97 |
| For wharfs | 35,201.03 |
| For miscellaneous purposes | 195,281.91 |
| Total | 935,411.24 |

## REGULAR SUPPLIES APPROPRIATION.

From this appropriation there has been allotted for—

| | |
|---|---|
| Heating apparatus | $187,776.99 |
| Lighting apparatus | 35,565.67 |
| Cooking apparatus | 2,083.32 |
| Repairs to bakeries | 4,277.57 |
| Construction of bakehouses and other buildings enumerated below | 27,436.88 |
| Miscellaneous | 18,636.49 |
| Total | 272,776.92 |

*List of buildings authorized from regular supplies funds.*

| Post. | Designation. | Material. | Amount authorized. |
|---|---|---|---|
| Fort Williams, Me | Bakery | Frame | $1,193.00 |
| | Scales shed | do | 147.71 |
| Fort Mott, N. J | Bakery | do | 1,182.00 |
| Presidio of San Francisco, Cal. | Power house for electric plant | Brick | 14,025.00 |
| Mayaguez, P. R | Bakery | do | 3,840.17 |
| Fort Meade, S. Dak | do | Stone | 4,849.00 |
| Fort Huachuca, Ariz | Hay shed | Corrugated iron | 2,200.00 |
| Total | | | 27,436.88 |

## CONSTRUCTION OF ARTILLERY POSTS.

The allotments made during the year for construction, plumbing, and electric wiring of buildings to shelter garrisons at seacoast fortifications are included in the foregoing lists under the head of "Barracks and quarters" and "Military posts" appropriations. Below will be found a statement of the progress of building operations at each post and a recapitulation of the expenditures authorized for each post from funds of the fiscal year 1899–1900, including heating apparatus from the appropriation for regular supplies, and construction of water and sewer systems, wharfs, roads, walks, grading, etc., from the appropriation for army transportation.

The permanent buildings authorized this year are of frame construction, except at Forts Adams, Totten, Williams, and Preble, where brick is used for certain buildings, as shown in the foregoing tables.

On March 1, 1900, the Secretary of War directed that "the buildings to be erected at once will be constructed without regard to the present, permanent, or temporary strength of batteries; but for the present, at least, about 80 men may be assumed as the number for which separate accommodations should be provided, and until further orders these buildings may be of the same general plan and character of construction as those already constructed at seacoast fortifications."

In the last annual report of the construction and repair division, it was recommended that Congress be asked to raise the limit of cost of barracks and quarters at seacoast defenses. The Secretary of War recommended to Congress that the limit be fixed at $1,200 per man for each man required for one relief to man the guns at each post, up to 83 men, the present permanent strength of a battery, enlisted and commissioned, and for each man required beyond this number at $600 per man; and this provision was enacted into law by the sundry civil act of June 6, 1900, under the head of "Military posts."

### FORT ADAMS, R. I.

On October 30, 1899, contract was made for additions to and alterations in light battery barracks to accommodate a total of 162 men.

In October $3,000 was allotted for removing embankments to provide sites for buildings, the work being completed in December. A subsistence storehouse, a quartermaster's stable for 30 horses, and a wagon shed were contracted for on May 1, 1900. In June, 1900, the work of fitting new guardhouse for use as administration building and the erection of a double set of noncommissioned officers' quarters were commenced. On June 12, 1900, contract was made for constructing dormitories over and remodeling casemates to provide accommodations for three batteries of heavy artillery of 113 men each. The total cost of above work will be $122,915.50.

### FORT BAKER, CAL.

On September 5, 1899, three temporary buildings containing squad room for 24 men, mess hall, and quarters for an officer were completed at a cost of $2,385.20, including sewer, earth closets, etc.

### FORT BANKS, WINTHROP, MASS.

A barrack for 80 men, a double set officers' quarters, a double set noncommissioned staff officers' quarters, a quartermaster's and subsistence storehouse, a hospital, and a set of hospital steward's quarters at this post, on which work was commenced in the previous fiscal year, were completed on December 2, 1899. A building purchased with land for reservation is being utilized as officers' quarters, making a total of three sets of quarters now available.

On June 25, 1900, contracts were made for a barrack for 100 men, 2 double officers' quarters, and 1 single officers' quarters to accommodate another battery of artillery, at a cost of $54,933, including plumbing and heating.

### FORT CASEY (ADMIRALTY HEAD), WASH.

| | |
|---|---|
| A frame barrack for 16 men and a single set of officers' quarters were completed on February 22, 1900, at an approximate cost (including outbuildings and plumbing) of | $6,980.60 |
| For temporary storehouse there was allotted | 250.00 |
| For a board walk and for extension of water and sewer systems | 994.20 |
| Total | 8,224.80 |

### FORT CASWELL, N. C.

At this post there is temporary shelter for about 4 officers and 192 enlisted men. The commencement of permanent construction has been delayed by the difficulty in securing a post site. On August 10, 1899, funds were allotted for filling a portion of marsh to provide sites for barracks and quarters.

| | |
|---|---|
| The total amount expended for this work during the fiscal year was | $14,944.70 |
| On January 8, 1900, there was allotted for sinking a 6-inch artesian well. | 7,000.00 |
| On June 25, 1900, contract was made for permanent buildings for 1 battery, including plumbing and electric wiring, viz, a barrack for 100 men, a detached mess room, 2 single officers' quarters, and 1 double noncommissioned officers' quarters, amounting to | 31,387.50 |
| Total | 53,332.20 |

### FORT COLUMBIA (CHINOOK POINT), OREG.

A temporary barrack for a detachment was completed November 30, 1899, at a cost of $986.

### FORT CROCKETT, TEX.

On May 3, 1900, the purchase of land at City Beach, near Galveston, Tex., was authorized, at a cost of $126,000, as provided for in the Army act of March 3, 1899, under the head of "Barracks and quarters." In April, 1900, steps were taken to begin the construction of a post on this site, to be known as Fort Crockett. In June the following buildings were placed under contract and work thereon commenced: One barrack for 100 men, 5 single officers' quarters, 4 single noncommissioned officers' quarters, a mess hall, a lavatory, an administration building, a stable and wagon shed, a bakery, a hospital, and a set of hospital steward's quarters. The contract prices, including plumbing and electric wiring, amount to $67,832.48.

### FORT DADE (EGMONT KEY), FLA.

At this post the following buildings chargeable to funds of the fiscal year 1898–99 were completed on August 22, 1899: Three single officers' quarters, a barrack for 65 men, a mess building, a single noncommissioned staff officers' quarters, a hospital, a set of hospital steward's quarters, and a storehouse.

From funds of fiscal year 1900 buildings were authorized as follows: One single officers' quarters, 1 barrack for 65 men, an adminstration building, a bakery, a shop building, a stable and wagon shed, an oil house, and an addition to storehouse, at a cost of $14,850. The barrack and officers' quarters were finished January 15, 1900, and the other buildings are nearly completed, furnishing accommodations for 130 enlisted men and 4 officers.

On July 19, 1899, $1,300 was alloted for the construction of 11 cisterns for this post.

### FORT DE SOTO (MULLET KEY), FLA.

In June, 1900, buildings for one battery at this post were contracted for, viz: A barrack for 100 men, a mess room and kitchen, 3 single officers' quarters, 1 double noncommissioned officers' quarters, a storehouse, a guardhouse, an administration building, a bakery, a stable, a shop building, a hospital, and a set of hospital steward's quarters. Cost, including plumbing and electric wiring, $69,453.68.

### FORT DU PONT (BATTERY POINT), DEL.

| | |
|---|---|
| At this post there are two temporary barracks for 60 men each, which were erected in the previous fiscal year, and temporary quarters for one officer, the latter being completed on January 5, 1900, at a cost of. | $2,368.00 |
| On April 14, 1900, authority was given for sinking an 8-inch artesian well at a cost of | 4,500.00 |
| Permanent buildings for two batteries were contracted for on May 31, 1900, as follows: Two barracks for 100 men each, 6 single officers' quarters, 2 double noncommissioned officers' quarters, an administration building, a stable and wagon shed, a guardhouse, a bakery, a hospital, and a set of hospital steward's quarters. Cost, including plumbing, electric wiring, and heating apparatus | 218,398.00 |
| Total | 225,266.00 |

### FORT FLAGLER (MARROWSTONE POINT), WASH.

The following buildings for one battery of artillery, contracted for on June 19, 1899, have been completed: A barrack for 80 men, 2 double officers' quarters, a set of noncommissioned officers' quarters, an administration building, a guardhouse, a quartermaster's and subsistence storehouse, a stable and wagon shed, a shop building, a bakery, a hospital, and a set of hospital steward's quarters.

| | |
|---|---|
| In October, 1899, there was expended for temporary shelter for troops... | $446.30 |
| On January 31, 1900, a road from wharf to engineer quarters was completed at a cost of | 800.00 |
| A sidewalk laid at a cost of | 710.00 |
| A sewer system completed at a cost of | 2,950.00 |
| On March 2, 1900, a double noncommissioned officers' quarters, a fuel shed, and a lavatory were contracted for at | 9,487.70 |
| On March 9 there was allotted for sinking a well | 3,500.00 |
| On April 12 a water system for flushing and fire purposes was placed under contract, amounting to | 5,997.00 |
| There has been allotted for clearing away underbrush as fire protection.. | 700.00 |
| Also for outbuildings, electric wiring, walks, lockers, and other improvements on new buildings | 4,259.50 |
| On May 31, 1900, contracts were executed for a barrack for 100 men and 4 single officers' quarters (to accommodate a second battery of artillery), including plumbing and electric wiring, at | 39,546.00 |
| Total | 67,850.20 |

### FORT FREMONT, S. C.

Funds were allotted in September and October, 1899, for the construction of the following buildings, etc., which were completed in May, 1900, at a cost of $23,653.54, viz: Three officers' quarters, a bar rack for 65 men, a set of hospital steward's quarters, a guardhouse, a commissary and quartermaster's storehouse, an addition to mess building, two single sets noncommissioned officers' quarters, alterations in hospital, and 10 cisterns. Including buildings previously constructed there are now accommodations at this post for 4 officers and 115 men, i. e., for a battery of present strength.

### POSTS NEAR GALVESTON, TEX.

The work of filling in the site of Fort San Jacinto (Fort Point) was continued during the year, the total expenditures authorized for the year being $14,640.05.

On December 16, 1899, a barrack for 120 men, and quarters for 3 officers, and other temporary buildings were completed at Camp Hawley, also a temporary barrack for 11 men, and other buildings at the Fort Point 10-inch gun battery. On December 30 the erection of additional temporary buildings at Camp Hawley, City Beach, and Bolivar Point (Fort Travis) was authorized.

| | |
|---|---|
| The cost of these temporary structures was | $14,062.47 |
| In April there was allotted for laying water pipe to kitchen near batteries at Fort Point | 1,475.00 |
| On June 12, 1900, a wharf was completed at Bolivar Point, at a cost of... | 3,322.59 |
| Total | 29,500.11 |

Permanent buildings for new post at City Beach are enumerated above under head of Fort Crockett.

(All buildings and other improvements at posts near Galveston were swept away by the storm of September 8, 1900.)

### FORT GREBLE, R. I.

The following permanent buildings, contracted for in June, 1899, were completed on July 2, 1900: A barrack for one battery of 80 men, 2 double officers' quarters, 1 double noncommissioned officers' quarters, a hospital, a set of hospital steward's quarters, a stable, and wagon shed and a guardhouse.

During the year the following work was authorized:

| | |
|---|---|
| Sinking wells, approximately | $6,000.00 |
| Conversion of temporary barracks into storehouse | 2,656.72 |
| Sewer, drains, and cistern (completed June 1, 1900) | 1,967.00 |
| Wall lockers in barrack | 1,494.00 |
| Construction of barrack for 100 men, 2 single officers' quarters, and 1 single noncommissioned officers' quarters (with plumbing, heating, and electric wiring), contracted for in June, 1900, at | 45,793.00 |
| Total | 57,910.72 |

### FORT HOWARD (NORTH POINT), MD.

| | |
|---|---|
| At this post there is a barrack for 20 men, and other temporary structures. An additional temporary storehouse was erected within the year at a cost of | $947.30 |
| The construction of a permanent post was begun in June, 1900, when buildings for a two-battery post were placed under contract, viz: 2 barracks for 100 men each, 6 single officers' quarters, 2 double noncommissioned officers' quarters, an administration building, a stable and wagon shed, a guardhouse, a bakery, a hospital, and a set of hospital steward's quarters. The contract prices, including plumbing, heating, and electric wiring, amount to | 157,979.00 |
| Additional work was commenced in June, as follows: | |
| Macadamizing road from wharf | 5,000.00 |
| Sinking an 8-inch artesian well | 3,600.00 |
| Total | 167,526.30 |

### FORT HUNT, VA.

A barracks for 80 men, 2 double officers' quarters, a hospital, a bakery, and a guardhouse, erected from funds of the preceding fiscal year, were completed on March 31, 1900.

The following allotments have been made for continuing work during the year:

| | |
|---|---|
| Sinking artesian well (completed in January, 1900) | $3,500.00 |
| Water and sewer systems, contracted for in May, 1900 | 16,080.85 |
| Construction of lavatory, contracted for on May 7 | 4,180.00 |
| Stationary lockers in new barracks, etc | 975.00 |
| Sheathing, painting, and remodeling barracks and other temporary buildings, for use as storehouses, post school, etc | 4,017.26 |
| Construction of 2 double noncommissioned officers' quarters, coal shed, administration building, quartermaster's stable, and oil house, with plumbing and electric wiring, contracted for June 11, 1900, amounting to | 17,637.00 |
| Total | 46,390.11 |

### FORT MONROE, VA.

To increase the capacity of barrack No. 5 from 6 batteries of 60 men each to 6 batteries of 113 men each and band, the work of constructing a third story on the building was placed under contract and commenced in June, 1900, the cost being as follows:

| | |
|---|---|
| Construction, proper | $37,207.36 |
| Heating apparatus | 3,976.36 |
| Total | 41,183.72 |

### FORT MORGAN, ALA.

At the beginning of the year there were permanent barracks for 60 men and quarters for 4 officers at this post.

| | |
|---|---|
| In October, 1899, there were authorized to complete shelter for battery, 2 temporary barracks for 60 men each, and a kitchen, which were completed in January at a cost of | $3.320.00 |
| On June 15, 1900, the following permanent buildings were placed under contract: A barrack for 120 men, a mess hall for enlisted men, 2 single officers' quarters, a double noncommissioned officers' quarters, a bakery, 2 additions to storehouse, 2 lavatories, an ordnance storehouse, and a coal shed. The cost of these buildings, including plumbing and wiring, will be | 50,382.13 |
| A water and a sewer system for the post are in course of construction at a cost of | 14,230.08 |
| For minor items of construction work, including oil house, boathouse, bath-house, walks, fences, drainage and plumbing in existing buildings, there has been allotted during the year | 2,458.44 |
| Total | 70,390.65 |

### FORT MOTT, N. J.

A double set of noncommissioned officers' quarters, contracted for in the previous fiscal year, was completed on September 30, 1899. The construction work done during the year included the sinking of an artesian well, the construction of temporary barracks, a temporary wagon shed, a bakery, a bath house, a dry earth closet, etc., at a cost of $8,655.19.

### FORT PICKENS, FLA.

| | |
|---|---|
| Work on this post was begun during the year, and a barrack for 60 men and 2 single officers' quarters were completed March 31, 1900, with plumbing, at a cost of | $12,412.00 |
| One double noncommissioned officers' quarters was completed on April 30, with plumbing, costing | 3,089.39 |
| In May and June a barrack for 80 men (or 120 if used only as dormitory), a guardhouse, an ordnance storehouse, and an oil house were contracted for, with plumbing and wiring, amounting to | 19,235.00 |
| On May 17 a water and sewer system were authorized, at estimated cost of | 11,163.00 |
| Total | 45,899.39 |

### FORT PREBLE, ME.

There are 3 barracks (one of them a temporary building) for 113 men, and 5 sets of quarters at this post.

| | |
|---|---|
| On June 4, 1900, permanent buildings for another battery, viz: A barrack for 100 men, a double officers' quarters, a guardhouse, and a hospital, with plumbing, heating, and electric wiring, were contracted for at | $75,751.00 |
| On June 14 a sewer system for the post was placed under contract at | 8,700.00 |
| Steam-heating apparatus has been placed in officers' quarters, a boathouse built, etc., at an additional cost of | 2,226.00 |
| Total | 86,677.00 |

### FORT RODMAN (CLARKS POINT), MASS.

Temporary barracks for 20 men, with plumbing and sewer and water connections, were built during the year at a cost of $4,996.13.

### FORT SAINT PHILIP, LA.

At the beginning of the year there were 2 sets of quarters and an old barrack at this post.

| | |
|---|---|
| In October, 1899, a barrack for 60 men, 2 single officers' quarters, and a guardhouse were contracted for, and have been completed at a cost of | $16,700.00 |
| An ordnance storehouse has been built, costing | 2,565.25 |
| Also a temporary hospital with plumbing, amounting to | 2,849.00 |
| And a temporary stable | 170.00 |
| Total | 22,284.25 |

### FORT SCREVEN, GA.

There are permanent quarters for 4 officers and a permanent barrack for 65 men at this post.

| | |
|---|---|
| An additional temporary barrack for 113 men was authorized in October and completed in November, 1899, at a cost of | $1,500.00 |
| Permanent buildings for another battery were placed under contract and work on same commenced in June, 1900, viz: A barrack for 100 men, a lavatory, 2 detached mess halls and kitchens, 2 single officers' quarters and a double set of noncommissioned officers' quarters, at a cost, including plumbing and wiring, of | 35,992.07 |
| A water system was completed on March 16, 1900, the contract price being | 11,970.00 |
| Allotments were made during the year for miscellaneous improvements on grounds and buildings amounting to | 5,686.48 |
| Total | 55,148.55 |

### FORT STEVENS, OREG.

Two barracks for 80 men each, 3 double officers' quarters, an administration building, a quartermaster's stable, a guardhouse, a double noncommissioned officers' quarters, a bakery, and a workshop at this post were placed under contract on June 17, 1899. These buildings are nearly completed. A quartermaster's and subsistence storehouse, contracted for on the same date was completed on May 1, 1900.

For continuing work at this post, funds were allotted during the year as follows:

| | |
|---|---|
| Sinking a 6-inch well | $4,000.00 |
| Spur railroad track and waiting room | 3,133.00 |
| Grading post site | 4,518.07 |
| Sewer system | 3,636.00 |
| Miscellaneous items | 1,008.80 |
| | 16,295.07 |

### FORT STRONG (LONG ISLAND HEAD), MASS.

Permanent construction at this post was not begun during the year, the title to land required for post site not having been obtained until June 27, 1900. The following expenditures, however, were authorized:

| | |
|---|---|
| Extension of wharf with automatic drop and storage building on same | $4,200.00 |
| Temporary buildings for 2 officers and 113 men (completed) | 3.200.00 |
| Water connection for same | 60.00 |
| | 7,460.00 |

### FORT SUMTER, S. C.

A frame barrack for 50 men at this post was completed March 9, 1900, the cost being $3,805.

### FORT TOTTEN, N. Y.

To shelter a battery of artillery at this post, a barrack for 120 men, including plumbing, heating, and gas piping, was contracted for in January, 1900, amounting to $34,258.

### FORT WASHINGTON, MD.

This post has accommodations for 3 officers and 133 men (including temporary barracks for 53 men).

| | |
|---|---|
| To provide permanent shelter for 2 additional batteries, 2 barracks for 100 men each and 6 single officers' quarters were contracted for on June 14, 1900, amounting to | $84,506.26 |
| (The cost of plumbing, heating, and electric wiring will be defrayed from funds of the fiscal year 1901.) | |
| The construction of a wharf was completed on February 1, 1900, with storage shed on same, at a cost of | 6,360.00 |
| For continuing work on well, there has been allotted | 4,773.49 |
| And for addition to bakery | 450.00 |
| Total | 96,089.75 |

### FORT WILLIAMS (PORTLAND HEAD), ME.

A double set of officers' quarters and an oil house, erected from funds of the preceding fiscal year, were completed February 22, 1900. There are also temporary barracks for 200 men, and a temporary set of officers' quarters at the post.

To provide permanent shelter for one battery, additional buildings were placed under contract in June, 1900, viz:

| | |
|---|---|
| 1 barrack for 100 men, 1 double officers' quarters, 1 double noncommissioned officers' quarters, and a hospital. Cost, including plumbing and heating, amounts to | $76,711.00 |
| Additional expenditures have been made as follows: | |
| Construction of bakery and coal shed (completed) | 2,312.63 |
| Grading | 5,500.00 |
| Wagon shed and shed over scales | 565.71 |
| Total | 85,089.34 |

## CONSTRUCTION OF INTERIOR POSTS.

Under this head the principal building operations of the year have been carried on at Forts Meade and D. A. Russell, where the work of enlargement and reconstruction has been continued; at the new post of Fort Lincoln, N. Dak., and at Jefferson Barracks and Fort Leavenworth, where extensive improvements have been commenced.

### FORT MEADE, S. DAK.

Under the special appropriation of July 1, 1898 ($30,000), the construction of barracks for one company was authorized May 11, 1899, and contracted for August 11, 1899, the contract prices being stated in the last annual report of this division. These barracks are practically completed. A bakery was also contracted for on May 10, 1900, at a cost of $4,849.

### FORT D. A. RUSSELL, WYO.

The bachelor officers' quarters and two double officers' quarters, for which funds were allotted on May 23, 1899, from the special appropriation of July 1, 1898 ($30,000), were placed under contract on July 24, 1899, and the work is nearly completed. A forage house is also under construction at this post, at a cost of $4,886.

### FORT LINCOLN, BISMARCK, N. DAK.

A double set of officers' quarters and a barrack for 100 men were completed on April 30, 1900, and placed in charge of a custodian. The cost of these buildings was set forth in the last annual report; the cost of construction proper being defrayed from the special appropriation of July 1, 1898 ($40,000), and the plumbing, heating, and gas piping from the appropriations for army transportation and regular supplies of the fiscal year 1900. No further allotments were made during the year.

### JEFFERSON BARRACKS, MO.

The following work was placed under contract and begun in June, 1900, the cost of construction, plumbing, and electric wiring of buildings being charged to the appropriation for barracks and quarters, the cost of heating apparatus to regular supplies, and the cost of grading, removing old buildings, and work on water and sewer systems, roads, etc., to the appropriation for army transportation, these amounts being included in the foregoing statements of expenditures from these appropriations:

| | |
|---|---|
| Grading | $10,080.00 |
| Wrecking old buildings | 4,950.00 |
| New roads, driveways, changes and extension of sewer system, and new granitoid walks | 41,736.30 |
| Sinking an artesian well | 1,200.00 |
| New administration building | 18,689.00 |
| Addition to storehouse | 12,735.00 |
| Oil house | 395.00 |
| Total | 89,785.30 |

### FORT LEAVENWORTH, KANS.

As stated under the head of "Military posts appropriation," Congress appropriated $50,000 for the erection of barracks, quarters, gun sheds, and stables for one battery of light artillery at this post. Congress also set aside $60,000 from the hospital appropriation for the construction of a hospital at this place. A board of officers was appointed to investigate the subject of additional construction at the post, and to carry out a portion of the recommendations of the board, the Secretary of War on April 4, 1900, allotted $200,000 from the Regular Army appropriations of the fiscal year 1900 ("Barracks and quarters" for the construction, plumbing, and electric wiring, and "Regular supplies" for heating apparatus), in addition to the $110,000 appropriated by Congress, making a total of $310,000 available for the reconstruction and enlargement of the post. Steps were at once taken to begin work, and on June 11, 1900, the following buildings were placed under contract and work commenced, the total expenditure involved being $303,469.77, and the amounts chargeable to each of the four appropriations being shown in detail in the foregoing tables:

1 hospital (48 beds).
8 double officers' quarters (16 sets) and bachelor officers' quarters (24 sets).
1 artillery barrack for 120 men.
1 light artillery stable for 134 horses.
2 cavalry stables for 110 horses each.
1 light battery gun shed.

### GENERAL HOSPITALS.

After the close of the fiscal year, the buildings and appurtenances of the hospital at Savannah, Ga., were sold at public auction for the sum of $17,100, and the lease of hospital site terminated. Steps are also being taken to dispose of the buildings of the Josiah Simpson Hospital, near Fort Monroe, Va.

General Order No. 6, Adjutant-General's Office, 1900, directed the discontinuance of Fort Bayard, N. Mex., as a garrison post, and the establishment there of a sanitarium for officers and enlisted men suffering from tuberculosis.

| | |
|---|---|
| There has been allotted to repair the buildings for this purpose (barracks and quarters) | $18,025.00 |
| Water supply and sewer improvements (army transportation) | 6,197.66 |
| Total | 24,222.66 |

To complete the general hospital at the Presidio of San Francisco, a guardhouse, a dining hall and kitchen for officers, a boiler and power building with heating and lighting plant, a filtration plant, and a refrigerating plant were erected and numerous improvements made on grounds and buildings. The total expenditure during the year was, approximately, $69,000.

### CAMPS, TEMPORARY CORRALS, ETC.

The following table shows expenditures reported from barracks and quarters and army transportation funds of the fiscal year 1899-1900, for flooring tents, constructing mess kitchens, latrines, etc., for troops in camp; expenditures for temporary corrals, and for structural water supply and sewerage, clearing, grading, roads, etc., in connection with camps and corrals:

| Location. | Barracks and quarters. | Army transportation. |
|---|---|---|
| Presidio of San Francisco, Cal.: | | |
| Model camp | $21,942.91 | $29,331.54 |
| Corrals | ............ | 24,121.75 |
| Camps for casuals, etc | 16,179.02 | 50,133.86 |
| Angel Island, Cal. (detention camp) | 14,885.79 | 9,040.06 |
| Fort Niagara, N. Y | 1,500.00 | 1,500.00 |
| Fort McPherson, Ga | 36.00 | 1,419.00 |
| Fort Ethan Allen, Vt | 1,186.11 | 1,443.58 |
| Camp Meade, Pa | 191.11 | 2,160.24 |
| South Framingham, Mass | 1,533.99 | 553.71 |
| Plattsburg Barracks, N. Y | 450.00 | ............ |
| Wardner, Idaho (Camp Wm. H. Osborne) | 2,227.30 | 33.50 |
| Wallace, Idaho | 100.00 | ............ |
| Seattle, Wash. (camps and corrals) | ............ | 7,574.65 |
| Tacoma, Wash. (corral) | ............ | 195.51 |
| Fort Logan, Colo | 1,710.12 | 1,915.00 |
| Vancouver Barracks, Wash | 4,815.06 | 7,969.99 |
| Chickamaugua Park, Ga. (depot) | 41.00 | 170.25 |
| Sequoia and General Grant National Parks, Cal | 97.24 | ............ |
| Camp near Wawona, Cal | 74.77 | ............ |
| Fort Leavenworth, Kans | 4,860.00 | 775.00 |
| Fort Riley, Kans | 2,029.88 | 722.25 |
| Fort Snelling, Minn | 994.75 | 5,988.90 |
| Fort Sam Houston, Tex | 2,630.82 | 1,319.20 |
| Fort Thomas, Ky | 1,445.00 | 2,193.00 |
| Fort Crook, Nebr | 1,326.46 | 1,901.35 |
| Jefferson Barracks, Mo | 6,403.20 | 650.60 |
| Fort Sheridan, Ill | 1,541.60 | 1,122.75 |
| Total | 88,201.63 | 152,235.64 |

There was also expended at South Framingham, Mass., after camp was vacated by United States troops, from the appropriation for incidental expenses, $859.36, for restoring the State grounds to former condition, and at Fort Sheridan, Ill., $118.75, regular supplies funds, for removing dead trees from grounds, making the total expenditure for preparing and restoring camp grounds, approximately, $241,415.38.

At the beginning of the fiscal year troops were in camp only at Middletown, Pa. (Camp Meade), and at the Presidio of San Francisco, Cal. Orders having been issued for organizing 10 regiments of infantry volunteers—the Twenty-sixth at Plattsburg Barracks, the Twenty-seventh and Twenty-eighth at Camp Meade, the Twenty-ninth at Fort McPherson, the Thirtieth at Fort Sheridan, the Thirty-first at Fort Thomas, the Thirty-second at Fort Leavenworth, the Thirty-third at Fort Sam Houston, the Thirty-fourth at Fort Logan, and the Thirty-fifth at Vancouver Barracks—on July 8, 1899, steps were taken to ascertain what facilities were available at these posts for quartering and messing the troops, water supply, water conveniences, etc. At some of the posts vacant barrack buildings were utilized, but in most cases the troops were sheltered in tents, and the necessary expenditures were authorized for tent floors and to provide such other camping facilities as were required. The same course was pursued when orders were issued in August for the organization of 12 additional regiments of infantry volunteers—the Thirty-eighth and Forty-ninth at Jefferson Barracks, the Thirty-ninth at Fort Crook, the Fortieth at Fort Riley, the Forty-first and Forty-seventh at Camp Meade, the Forty-second at Fort Niagara, the Forty-third at Fort Ethan Allen, the Forty-fourth at Fort Leavenworth, the Forty-fifth at Fort Snelling, the Forty-sixth at South Framingham, Mass., and the Forty-eighth at Fort Thomas, Ky. The total expenditures reported for camp improvements at these places are shown in the foregoing statement. The organization of these 22 regiments was completed and their camps vacated by November, 1899.

In December, 1899, the land leased at Camp Meade, Pa., was relinquished and the temporary buildings, tent floors, etc., were advertised and sold to the highest bidders. The camp at Wardner, Idaho, was abandoned about June 1, 1900.

In July, 1899, a camp for the Third Cavalry was established at Woodland Park, near Seattle, Wash. In August orders were given for dismantling this camp. Between October and December, 1899, mule sheds and water system were constructed for a corral at Seattle. On June 20, 1900, funds were allotted for clearing ground at Magnolia Bluff and preparation of camp in connection with shipment of animals from Seattle to Manila.

The principal expenditures for camping troops during the fiscal year 1899–1900 were made at San Francisco, as shown by the above statement. The total cost of preparing these camps and keeping them in repair to June 30, 1900, not including stoves, ranges, or other movable supplies, has been reported as follows:

MODEL CAMP AT THE PRESIDIO.

| | |
|---|---|
| From barracks and quarters funds, fiscal year 1899 | $14,454.97 |
| Barracks and quarters, 1900 | 21,942.91 |
| Army transportation, 1899 | 5,694.34 |
| Army transportation, 1900 | 29,331.54 |
| Total | 71,423.76 |

### CASUAL CAMPS AT THE PRESIDIO.

| | |
|---|---|
| From barracks and quarters funds, fiscal year 1899 | $3,426.73 |
| Barracks and quarters, 1900 | 16,179.02 |
| Army transportation, 1899 | 14,545.75 |
| Army transportation, 1900 | 50,133.86 |
| Total | 84,285.36 |

### DETENTION CAMP AT ANGEL ISLAND.

| | |
|---|---|
| From barracks and quarters funds, fiscal year 1900 | $14,885.79 |
| Army transportation, 1900 | 9,040.06 |
| Total | 23,925.85 |

There was also remitted, from army-transportation funds of the fiscal year 1900, for construction of corrals at the Presidio, with roads leading thereto, for horses en route to Manila, $24,121.75.

The department chief quartermaster gives the following account of the model and detention camps:

> The model camp was first occupied by troops on July 12, 1899, and vacated December 6, 1899, as a camp for incoming and outgoing troops, but has since been partially occupied by casual troops at the post under the supervision and control of the post authorities. Actual date of final completion of camp was September 11, 1899. The detention camp was completed and first occupied September 18, 1899, by the Thirty-first U. S. Volunteer Infantry, and vacated by that regiment on October 28, 1899; again occupied November 18, 1899, by the Forty-eighth U. S. Volunteer Infantry, and vacated December 20, 1899. A few suspected cases of contagious disease have been from time to time sent to this camp from incoming transports to await development of the malady, but no other regular occupation of the camp has been had. In the model camp the buildings are constructed of rough lumber, battened, with shingle roofs. The kitchens are provided with ranges and the dining rooms with stoves, rough tables, and benches. A wash trough extends the full length of kitchen in rear. The bath houses are provided with water heaters and boilers, and have four shower baths lined with zinc and furnished with hot and cold water. The latrines are constructed on the plans given in General Orders, No. 170, Adjutant General's Office, 1899, and have water connections. The different storehouses all have offices, which are provided with tables, chairs, etc. The subsistence storehouse has a cold room. The office of the mustering-out officer was divided into rooms and provided with telephone and telegraph. All the storehouses were heated by stoves. All kitchens, baths, latrines, etc., were connected with the water supply and all, except the latrines, connected with a sewer to the bay. The tents were floored with rough flooring, and all hospital and wall tents had rough frames. All tents were provided with stoves on brick hearths laid on top of the floors.
>
> In the detention camp the construction of the buildings was similar to that of the model camp, except that there were no bath houses. Earth closets and separate urinals were used in place of latrines. Three tanks, of 20,000 gallons capacity each, were erected and water supplied therefrom. An addition to the wharf was constructed to enable the steamer *General McDowell* to pump water to the tanks, and the old wharf was repaired and strengthened and a small storehouse erected thereon.

The following description of the "casual camps" is given by the quartermaster at the Presidio:

> The construction of the above camps was commenced in November, 1898, and completed in September, 1899. The construction, however, has not been continuous, additional camps being built only as the necessities of the service required. These camps have been occupied more or less since completion up to the present time. They have been built with a view to their permanency. The buildings, camp kitchens, etc., are of wood, with shingle roof and battened sides, and are solidly constructed. The latrines are equipped according to the system of closet troughs adopted by the War Department. All tent floors are elevated more or less above the surface of the ground, according to its formation, and each tent is equipped with a heating stove. The kitchens are equipped with cooking ranges, with hot and cold water, and each has a standpipe and slop hopper on the outside, properly sewered and trapped. On one side of each kitchen is a washroom, extend-

ing the entire length of the building, supplied with zinc-lined wooden troughs, with faucets for washing purposes, etc., all sewered and trapped. The kitchens are each 24 by 32 feet, being built large enough to afford messing facilities in rainy weather. Each regimental camp has three bath houses, each equipped with six showers, with hot and cold water. In fine, these camps, from a habitable and sanitary standpoint, including water and sewer systems, are as perfect as it is possible to make them. Their capacity is approximately 6,500 men.

Orders having been issued for the abandonment of the temporary depot and corral at Chickamauga Park, Ga., on July 12, 1900, instructions were given to retain certain storehouses and wagon sheds, to ship new lumber to Fort McPherson, and to take necessary steps to sell the remaining sheds and old lumber.

## CUBA, PORTO RICO, ALASKA, AND THE PHILIPPINES.

The cost of building material purchased in the United States and of labor and additional material employed in the construction of shelter for troops, structural water supply, etc., in the above-named military divisions and departments, chargeable to barracks and quarters and army-transportation funds of the fiscal year 1900, is shown in the following statement, so far as reported to this office:

| Division or department. | Barracks and quarters funds. | Army-transportation funds. | Total. |
|---|---|---|---|
| Division of Cuba | $1,151.78 | $9,926.44 | $11,078.22 |
| Department of Porto Rico | 203,197.92 | 30,839.99 | 234,037.91 |
| Department of Alaska | 293,357.74 | 60,307.20 | 353,664.94 |
| Division of the Philippines | 170,813.02 | 41,119.22 | 211,932.24 |
| Total | 668,520.46 | 142,192.85 | 810,713.31 |

## CUBA.

On July 11, 1899, by direction of the President, it was ordered that thereafter all expenditures necessary for construction, repair, or lease of buildings or wharves for public purposes in Cuba be paid for out of the revenues of the island upon the authorization and approval of the division commander. Under these instructions the cost of building material purchased in New York early in the fiscal year was defrayed from Cuban revenues, and all expenditures made in Cuba from barracks and quarters funds subsequent to July 1, 1899, for construction, repairs, and rents were reimbursed from Cuban revenues. The small expenditures included in the foregoing statement were authorized for the purchase of carpenters' tools, articles for water supply, odorless excavators, etc., in the United States for shipment to Cuba, and to pay accounts for sinking wells.

On August 10, 1899, the Secretary of War directed that the entire expense of the construction and equipment of the railway and wharf at Triscornia (Habana Bay) be reimbursed the United States from Cuban revenues. The total expenditures to September 30, 1899 (principally from funds of the fiscal year 1899), exclusive of claims for land for right of way, have been reported as follows:

| | |
|---|---|
| Railroad, including equipment, pier, and wharf | $264,617.47 |
| Warehouses | 41,870.30 |
| Operating, additional grading, ballasting, etc | 36,124.07 |
| Total | 342,611.84 |

This amount was reimbursed on January 4, 1900.

Incomplete statements have been received of the expenditures made during the year from insular funds. The total expenditures reported are as follows:

| | |
|---|---|
| Rents | $123,004.12 |
| Construction of buildings | 385,789.31 |
| Repairs to buildings | 69,743.40 |
| Structural heating, lighting, water supply, and sewerage | 69,460.17 |
| Roads, walks, grading, drainage, and wharves | 20,098.15 |
| Total | 668,095.15 |

The chief quartermaster, Department of Santiago and Puerto Principe, reports as follows regarding the posts in that department:

During the latter part of the preceding fiscal year (1899) the old Spanish barracks and other public buildings at the various places throughout the department where troops were stationed were renovated and disinfected and placed in condition for occupancy by troops as barracks, or to be used as storehouses. At such places as there were no barracks or public buildings suitable buildings were rented.

On July 1, 1899, all troops in this department were quartered in old Spanish barracks or other public buildings. Officers were quartered generally in rented buildings, though public buildings were used for this purpose at a few of the stations.

Hospitals were old Spanish hospitals or barracks.

Storehouses were rented, except at a few small stations where public buildings were available.

The offices were usually located in the Spanish buildings, though in some cases they were rented.

The animals generally were without shelter, except such places as canvas shelter had been improvised.

So far as the records of this office show, the barracks were large, roomy, and made excellent and satisfactory quarters.

The chief quartermaster, Department of Matanzas and Santa Clara, makes the following remarks:

The post of Hamilton Barracks, of which the construction was well advanced at the close of the fiscal year ending June 30, 1899, was completed during the early part of the past fiscal year, according to the original plans, from funds of the Quartermaster's Department. A number of extra buildings, which were found to be required, not provided for by the original plans, were also constructed and paid for from island funds.

The post of Rowell Barracks, at the mouth of the harbor of Cienfuegos, was also completed under the direction of First Lieut. J. L. Hines, Second Infantry, partly from quartermaster's funds and partly from island funds.

## PORTO RICO.

Funds were allotted in the past year from the barracks and quarters appropriation for the construction of a subsistence storehouse, three sets of officers' quarters, a guardhouse and a lavatory at San Juan, and a bath house at Ponce; also for reconstruction and repair of buildings damaged by the storm of August, 1899:

| | |
|---|---|
| Building material, tools, mill machinery, plumbing supplies, etc., were purchased at New York depot, amounting approximately to | $66,656.92 |
| There was expended in Porto Rico for hire of labor and additional material for construction and repairs, approximately | 136,541.00 |
| Total barracks and quarters funds | 203,197.92 |

The statements received do not show the actual cost of the above-named buildings or whether any additional buildings have been erected.

| | |
|---|---|
| From the appropriation for army transportation, plumbing materials, sanitary appliances, etc., have been purchased in New York, aggregating | $17,211.65 |
| The department chief quartermaster also reports expenditures from this appropriation for plumbing, structural water supply and sewerage, and work on roads, wharves, etc., amounting to | 13,628.34 |
| Total | 30,839.99 |

## ALASKA.

New posts, designated as Fort Egbert and Fort Gibbon, were partially constructed during the past year at Eagle City and Tanana, respectively. The construction of new posts at Fort St. Michael, Cape Nome, and Port Valdez was commenced in the spring of 1900, lumber for this purpose being purchased at Seattle and corrugated iron, hardware, etc., in Chicago, and shipped to Alaska. The allotments made for material and labor for these posts are set forth below. The actual cost of this lumber has not been reported.

*Fort Egbert.*—The following buildings for a company of infantry are reported as completed: A barrack, 3 officers' quarters, a hospital, a bakery, 5 storehouses, an administration building, a sawmill, a guardhouse, an ice house, and a barn. An additional storehouse, a stable, employees' quarters, and 3 noncommissioned officers' quarters were in course of construction at the close of the year.

| | |
|---|---|
| Expenditures on buildings for the year were, approximately | $65,621.95 |
| Plumbing supplies, pumps, etc., from army transportation funds were also furnished, costing | 4,051.20 |
| Total | 69,673.15 |

*Fort Gibbon.*—On July 25, 1900, buildings were completed as follows: One barrack, 4 officers' quarters, a hospital, 3 storehouses, a sawmill, a building for pilot, scout, etc., a bath house, and an ice house. An additional barrack, 4 officers' quarters, an administration building, a bakery, and a guardhouse were under construction, to accommodate in all about 2 companies of infantry. Approximate cost from funds of fiscal year 1900, $63,545.30.

*Fort Liscum* (*Valdez*).—For the construction of 2 single and 1 double officers' quarters, 1 noncommissioned officers' quarters, a barrack building for 100 men, an adjutant's office, a guardhouse, an amusement room, a bath house, a hospital, 3 storehouses, a stable, a forage house and corral, a bakehouse, a shop building, an oil house, and privies, there was allotted—

| | |
|---|---|
| To cover cost of material | $30,000.00 |
| Material for board walk (from army transportation funds) | 500.00 |
| For hire of labor, May 21 | 6,000.00 |
| For engine for hoisting on wharf (army transportation) | 2,000.00 |
| Total | 38,500.00 |

*Fort Davis* (*Cape Nome*).—For the construction of 1 single and 3 double officers' quarters, 2 barracks for 100 men each, and other buildings enumerated under head of Valdez, there was allotted—

| | |
|---|---|
| To cover cost of material | $50,000.00 |
| For material for board walk | 500.00 |
| For hire of labor | 7,200.00 |
| Total | 57,700.00 |

*Fort St. Michael.*—At this post the construction of 1 single and 3 double officers' quarters, 2 barracks for 100 men each, and additional buildings corresponding to those enumerated under head of Valdez has been authorized; also an administration building, quarters for clerks, and quarters for other civilian employees in connection with department headquarters. Funds have been allotted as follows:

| | |
|---|---|
| Material for buildings | $50,000.00 |
| Material for board walk and wharf | 1,000.00 |
| Hire of labor | 10,000.00 |
| Material for medical storehouse | 1,463.00 |
| Total | 62,463.00 |

### GENERAL ALLOTMENTS FOR ALASKA.

The following additional expenditures have been authorized for buildings, roads, water supply, etc., for Alaska in general:

| | |
|---|---|
| Continuing the construction of transcontinental road from Port Valdez to Eagle City | $49,975.00 |
| 2 distilling plants (incidental expenses appropriation) | 4,730.00 |
| Mechanics' tools, lime, feed boxes, etc | 2,172.49 |
| Tram cars and track for landing quartermaster stores and building material | 2,030.00 |
| Remitted to department chief quartermaster for general construction work | 7,355.00 |
| Condensing plants and fire extinguishers (incidental expenses) | 3,125.00 |
| Plows, scrapers, etc | 251.00 |
| Total | 69,638.49 |

### PHILIPPINE ISLANDS.

Materials, tools, etc., for construction of buildings, roads, water and sewer systems, and refrigerating plant have been purchased during the year at Seattle, San Francisco, and New York and shipped to Manila, from different appropriations and from the Philippine revenues, as summarized below:

| | |
|---|---|
| From barracks and quarters funds, for 5,260,689 feet of lumber, with iron roofing and hardware; also for tools, cement, wood-working machinery, filters, etc | $170,350.38 |
| From army transportation funds, for sterilizing apparatus, filters, condensing plant, and articles to construct water and sewer systems | 41,119.22 |
| From incidental expenses appropriation, for 200 sterilizers and for condensing plants | 44,304.75 |
| From revenues of the islands, for construction of refrigerating plant at Manila (including labor), and for material for 18½ miles of railroad, water pipe and fittings, and 4 Smith crematories | 255,186.47 |
| Total | 510,960.82 |

The sum of $50,000, barracks and quarters funds, was remitted to Manila, but from reports rendered it appears that the only expenditures made from this remittance were as follows:

| | |
|---|---|
| Repairs to nipa buildings at Pasay cavalry barracks | $288.67 |
| Rent of office for depot quartermaster at Nagasaki, Japan | 173.97 |
| Total | 462.64 |

The officer in charge of the construction of refrigerating plant at Manila reports expenditures for material and labor on account of this plant to June 30, 1900, from Philippine funds, aggregating $582,234.64 (Mexican currency), also $9,980.35 (gold) for outstanding debts for material purchased in the United States.

The chief quartermaster, Division of the Pacific, reports additional expenditures from Philippine funds as follows (Mexican currency):

| | |
|---|---|
| Construction and repair of buildings | $479,362.44 |
| Rents | 352,652.89 |
| Structural water supply, sewerage and plumbing | 72,533.20 |
| Heating and lighting | 308,373.60 |
| Railway construction | 269,129.31 |

The chief quartermaster, Department of Northern Luzon, reports under date of August 14, 1900, that $52,369, Mexican money (public civil funds, included in above figures), had been allotted in March, 1900, for construction and repairs to provide buildings necessary for troops during the rainy season, that the work provided for was about completed, and that the garrisons generally appeared to be in satisfactory condition.

The chief quartermaster, Department of Southern Luzon, reports as follows:

> In most instances upon entering a town our troops have found it practically vacated, and at once occupied such buildings as were needed. As soon as the natives gained confidence they would return and claim their houses. In all cases where suitable houses could be obtained and the troops are more or less permanently stationed, houses have been rented from the owners if they can prove that they have taken no active part in the insurrection.
>
> In some instances shelter for the troops and the animals have been constructed of a temporary nature.

Col. Charles Bird, quartermaster, U. S. A., of this office, who recently visited the Philippine Islands on an inspection trip, makes the following remarks relative to shelter for troops and stores:

> The troops outside of Manila and on the island of Luzon, where it is impossible for them to secure buildings or old Spanish barracks in the towns near which they are stationed, are living in conical walled tents. In visiting General Hall's brigade, found a number of his troops living in tents. The troops on the islands of Panay, Mindora, Jolo, Cebu, and other islands, are housed in old Spanish barracks and dilapidated churches which have been abandoned, and in rented buildings so far as they can be secured.
>
> All of the buildings constructed on the islands for quartering troops are paid for out of the public civil fund. This is also true of the offices in Manila and the buildings rented for troops, which are paid for out of the same fund. * * *
>
> At points throughout the islands occupied by our troops where public buildings, barracks, and hospitals are found, they are at once taken possession of and used by the Government for offices, housing the troops, and taking care of the sick.

He also reports that accommodations for three regiments have been constructed near Manila (at Corregidor Island, exposition grounds, and Pasay), the buildings being constructed of nipa and bamboo.

Colonel Bird further states that buildings owned by private parties have been rented for storage purposes, the rent being paid from public civil funds, and that public animals are stabled in open structures thatched with nipa or old condemned canvass when commands are stationed for any length of time in one place.

### TARGET FUNDS.

"For shelter, shooting galleries, ranges for small arms, target practice, repairs, and expenses incident thereto," Congress, in the act making appropriations for the support of the Army, approved May 26, 1900, appropriated $10,000.

The total amount authorized for rent, repairs, and construction in each department, etc., is shown in the annexed statement.

| Departments, etc. | Amount. | Departments, etc. | Amount. |
|---|---|---|---|
| Department of the East | $727.00 | Camp Meade, Pa | $2,517.48 |
| Department of the Missouri | 1,186,87 | Westpoint, N. Y | 123.75 |
| Department of the Colorado | 961.01 | Division of Cuba | 1,202.80 |
| Department of Dakota | 688.39 | Department of Porto Rico | 841.25 |
| Department of California | 65.73 | Balance | 1,177.21 |
| Department of the Columbia | 163.51 | | |
| Department of Texas | 345.00 | Total | 10,000.00 |

### INCIDENTAL EXPENSES APPROPRIATION.

Expenditures from this appropriation amounting to $120,045.21 were authorized in this division for miscellaneous purposes, including stationary and box lockers and flagstaffs.

*Box lockers.*—Five thousand box lockers were manufactured at a cost of $1.80 each, and placed in stock at Jeffersonville depot. At the close of the year there was a balance of 3,930 lockers available for issue at this depot.

At New York depot 10,023 lockers were purchased, principally for troops in Cuba and Porto Rico. Of these, 3,000 cost $1.64 each and the remaining 7,023, $2.20 each. The lockers were disposed of as follows:

| | |
|---|---|
| Shipped to Cuba | 7,361 |
| Shipped to Porto Rico | 1,300 |
| Shipped to other posts | 1,212 |
| In stock June 30, 1900 | 150 |
| Total | 10,023 |

In addition to the above, 1,570 lockers were purchased at various points at total cost of $3,117.37. In all 16,593 lockers were purchased during the year at an average cost of $1.96.

*Flagstaffs.*—One of the 100-foot iron staffs from stock at St. Louis depot was erected during the year at Columbus barracks, leaving three available for issue. Flagstaffs of various designs were also erected at Fort Hunt, Va.; Fort Wood, N. Y.; Forts Casey and Flagler, Wash.; Fort Jackson, La.; Fort Caswell, N. C.; Fort Dade, Fla.; Columbus Barracks, Ohio; Fort Mackenzie, Wyo.; Fort St. Philip, La.; Fort Terry, N. Y., and Fort Michie, N. Y.

### ROAD AT THE PRESIDIO, CAL. (SPECIAL APPROPRIATION).

In special act of Congress approved March 3, 1899, $5,000 was appropriated for road to national cemetery, Presidio of San Francisco, Cal.

Contract was entered into on December 20, 1899, for construction of a stone wall along the southern boundary of the Presidio Reservation at $5.50 per linear foot, 35 cents per cubic foot for additional concrete foundation, and 55 cents per cubic foot for additional stonework.

| | |
|---|---|
| Under this contract there was expended to June 30, 1900 | $1,810.00 |
| Expended for advertising and pay of inspector | 324.00 |
| Balance on hand | 2,866.00 |
| Total | 5,000.00 |

### LOSSES BY FIRE.

The following statement shows damage to buildings by fire in the past year:

| Post. | Buildings. | Amount of damage. |
|---|---|---|
| Fort Du Chesne, Utah | 1 cavalry and 1 quartermasters' stable | Destroyed. |
| | Cavalry barrack | Do. |
| Fort Snelling, Minn | Engineers' quarters (No. 3) | Do. |
| Fort Keogh, Mont | Hospital (No. 23) | Do. |
| | Bath house (No. 56) | Damaged $200. |
| Fort Brady, Mich | Barrack (No. 12) | Damaged $10,000. |
| Dyea, Alaska | Building (shelter for men and stores) | Destroyed. |
| Fort Huachuca | Hay shed | Destroyed with 400 tons of hay. |
| Fort Hamilton, N. Y | Hospital | Damaged $300. |
| Fort Preble, Me | Bakery (No. 13) | Damaged $600. |
| Presidio of San Francisco, Cal. | Building No. 17, containing 14 sets officers' quarters. | Destroyed. |
| Boise Barracks, Idaho | Blacksmith shop | Do. |
| | Hospital | Damaged $1,000. |
| Fort Meade, S. Dak | Cavalry stable (No. 39) | Destroyed. |
| Fort Omaha, Nebr | Double set officers' quarters (Nos. 1 and 2) | Do. |
| Fort Leavenworth, Kans | Old battery stable (No. 93) | Do. |
| | Old artillery gun shed (No. 94) | Do. |
| Whipple Barracks, Ariz | Double set officers' quarters (Nos. 7 and 8) | Do. |
| Fort Wingate, N. Mex | Commissary storehouse (No. 34) | Damaged $100. |
| | Sawmill | Destroyed. |
| | 2 cavalry stables (Nos. 68 and 69) | Do. |
| Fort Washakie, Wyo | School, library, and chapel building (No. 37) | Damaged $1,500. |
| Fort Clark, Tex | Officers' quarters (No. 20) | Damaged $700. |
| | Outbuilding | Damaged $100. |
| | Forage room in stable | Damaged. |
| Fort Bayard, N. Mex | Hospital laundry (No. 12) | Damaged $60. |

Very respectfully,

M. C. MARTIN,
*Major and Quartermaster, United States Volunteers.*

The QUARTERMASTER-GENERAL.

WAR DEPARTMENT,
QUARTERMASTER-GENERAL'S OFFICE,
*Washington, D. C., September 12, 1900.*

GENERAL: I have the honor to submit annual report of the reservation branch of this office for fiscal year ending June 30, 1900.

This branch, under Special Orders, No. 187, of 1898, Adjutant-General's Office, is charged with providing water supply, sewerage, light, and heating of military posts, camps, and stations, hiring of grounds for military purposes, collection and filing of title papers and information pertaining to all lands under charge of the War Department purchased or appropriated for army or other military use, except when designated for permanent military fortifications, or for arsenals, etc.

It is also charged with all correspondence and papers in connection with fire protection, post and reservation maps, surveys, topography, and other miscellaneous subjects.

### OLD FORT BRADY, MICH.

Under terms of act approved July 8, 1886 (General Orders, No. 52, of 1886), the grounds comprising Old Fort Brady, Mich., authorized to be sold, were duly platted, appraised, etc., and under public advertisement the buildings and fences were disposed of at auction in October, 1893, for the sum of $2,072.50.

Fifty-four lots have thus far under the act been sold at public and private sale (at not less than appraised value), total amount realized being $54,073.49, which sum (less cost attending sales) has been deposited in the Treasury.

The remaining 10 lots are in charge of the quartermaster at Fort Brady, Mich., to whom all applications for purchase are made.

On August 25, 1897, the Secretary of War leased for five years from September 7, 1897, at nominal consideration, the "Cemetery lot" to the Soo Light Guards, Company G, Fifth Regiment, Michigan National Guard, for the erection thereon of an armory for drill purposes.

### OLD FORT BLISS, TEX.

Under act approved March 1, 1890, the military reservation of Old Fort Bliss, Tex., was platted, appraised, and advertised for sale at public auction July 3, 1895.

All of the lots (25 in number) have finally been disposed of at public and private sale at full appraised and approved valuation, $15,412, which amount, subject to expenses attending sales, has been deposited to credit of the United States Treasurer.

### OLD FORT OMAHA.

Act approved July 23, 1888 (General Orders, No. 60, of 1888), authorizes the Secretary of War, after purchase of site and construction of new post (now known as Fort Crook, Nebr.), to sell the military reservation known as Fort Omaha.

The new post has been built, but owing to business depression of recent years, legislation looking to its transfer to the State, recent wars, etc., no definite steps have yet been taken with view to disposing of this valuable parcel of land, covering about 80 acres.

In this connection it may be further stated that on January 2, 1900, Lieutenant-General Miles recommended that this reservation be retained, as in his judgment, under changed conditions of affairs, etc., it would be most valuable for military purposes. Further recommended that any steps looking to sale of this land be suspended.

### TYBEE ISLAND, GEORGIA.

Under authority of the Secretary of War of May 3, 1899, the following-described lots, title to which was favorably reported upon by the Attorney-General, were purchased at cost of $400 and paid for August 14, 1899:

GENERAL ORDERS, }
No. 162. }

HEADQUARTERS OF THE ARMY,
ADJUTANT-GENERAL'S OFFICE,
*Washington, September 1, 1899.*

* * * * * * *

II. The following order from the War Department is published for the information and guidance of all concerned:

WAR DEPARTMENT, *Washington, August 28, 1899.*

The following-described lands situated on Tybee Island, Chatham County, Ga., having been acquired by the United States, are hereby announced as a part of the military reservation at that place:

Lots Nos. 145, 146, and 147, as shown on the plat of the subdivision of the Tybee Beach Company's lands made by Percy Sugden, at Savannah, Ga., August 2, 1897, the boundaries of said lots being as follows:

Fronting on the northwest 285 feet on the light-house road, on the northeast 166 feet on the proposed extension of Alger street, on the southeast 337 feet on the lands of Naylor, and on the southwest 295 feet on the right of way of the Tybee Division of the Central of Georgia Railway.

The United States has also the right of way on that strip of land bounding said lot No. 147, on the northeast, known as the extension of Alger street, 40 feet wide, and of a lane to the northeast thereof of 10 feet width, whether the said proposed extension of Alger street and lane be carried out and accomplished as dedicated by the Tybee Beach Company or not.

ELIHU ROOT, *Secretary of War.*

### FORT COLUMBIA, WASH.

In order to control the water supply for Fort Columbia the Secretary of War, on May 4, 1899, authorized the purchase of lots 1 and 2 of sec. 15, and lot 4, sec. 21, T. 9 N., R. 10 W., of the Williamette meridian, covering about 53 acres adjoining said reservation, from the Northern Pacific Railroad Company, for $212.60.

Deed therefor duly executed; favorable opinion given by Attorney-General regarding title and purchase price paid said company by the chief quartermaster, Department of the Columbia.

In connection therewith the President of the United States also, on May 8, 1899, reserved for same purposes lot 9, sec. 22, T. 9 N., R. 10 W., of the Williamette meridian, Pacific County, covering about 33 acres.

II. The following General Order No. 51, 1900, from the War Department is published for the information and guidance of all concerned:

War Department, *Washington, April 17, 1900.*

The President of the United States, by order dated May 8, 1899, having reserved and set apart for military purposes lot 9, sec. 22, T. 9 N., R. 10 W., of the Williamette meridian, located in Pacific County, Wash., the same is hereby announced, in connection with certain adjoining land heretofore purchased, as an addition to the military reservation at Fort Columbia, Wash.

The complete addition to the reservation at Fort Columbia therefore includes the following-described lands in T. 9 N., R. 10 W., of the Williamette meridian, embracing 86.15 acres, more or less, to wit:

Lots 1 and 2 of sec. 15, lot 4 of sec. 21, and lot 9 of sec. 22.

Elihu Root, *Secretary of War.*

### SEACOAST LANDS.

Sundry civil act of July 1, 1898 (General Orders, No. 104, 1898), under head of "Military posts," provided $620,000 for enlargement of military posts, "and for the erection of barracks and quarters for the artillery in connection with the adopted project of seacoast defense," and authorized $50,000 of the above amount, or so much thereof as may be necessary, to be used for the purchase of suitable sites.

Sundry civil act of March 3, 1899 (General Orders, No. 49, 1899), under head of "Military posts," appropriated $100,000 "for the purchase of suitable sites."

By Special Order 37 of 1899, paragraph 59, the Secretary of War appointed a board of officers to meet in Washington February 15, 1899, to investigate and report upon the additional land necessary at the following-named places to provide for the garrison which it was the intention to station at each place; also to ascertain the cost of such additional land and whether the same could be obtained by purchase from the owner or by condemnation proceedings:

Fort Preble, Me.
Portland Head, Me.
Cushings Island, Me.
Great Hog Island, Me.
Fort Constitution, N. H.
Long Island Head (Fort Strong), Mass.
Delaware City (Fort Du Pont), Del.
Finns Point (Fort Mott), N. J.
Hawkins Point, Md.
North Point, Md.
Sullivans Island, S. C.

In this connection the following purchases have been made, by direction of the Secretary of War, after favorable opinion given by Attorney-General regarding title:

| | |
|---|---|
| 15 acres at Long Island Head (Fort Strong) | $18,541.41 |
| 111 acres at Delaware City (Fort Du Pont) | 10,000.00 |
| 120 acres at North Point, Md. (Fort Howard) | 25,114.28 |
| 23 acres at Portland Head (Fort Williams) | 50,000.00 |
| 5 acres at Fort Preble, Me | 10,000.00 |

relative to which the following general orders have been issued:

GENERAL ORDERS, No. 117.

HEADQUARTERS OF THE ARMY,
ADJUTANT-GENERAL'S OFFICE,
*Washington, August 25, 1900.*

* * * * * * *

II. The following order from the War Department is published for the information and guidance of all concerned:

WAR DEPARTMENT, *Washington, August 25, 1900.*

The following-described tract of land situated on Long Island, in Boston Harbor, adjoining the military reservation of Fort Strong, Mass., having been recently purchased for military purposes, is hereby announced as an addition to said reservation:

Beginning at a point at the intersection of a line at mean low water with the line of the present boundary between land of the United States and land supposed now or late to be of the city of Boston, which said point is about two hundred and forty-two (242) feet southeasterly from a stone monument which marks said boundary line, and from said point running about northwesterly in a straight line along said boundary line eight hundred and fifty-eight and fourteen hundredths (858.14) feet to the line of mean low water of Boston Harbor; thence turning and running about southwesterly along the line of mean low water of said harbor about seven hundred and thirty (730) feet to other land supposed to be of the city of Boston; thence turning and running by said land supposed to be of the city of Boston about southeasterly in a straight line parallel with and five hundred and fifty-nine (559) feet distant from said first-mentioned boundary line about fourteen hundred (1,400) feet to the line of mean low water of said harbor; thence turning and running about northerly along the line of mean low water about six hundred and forty (640) feet to the place of beginning, together with all the lands between mean low water and low water bounded on the northeast by the prolongation in a straight line of the northeasterly boundary line of the lands first above described, and on the southwest by the prolongation in a straight line of the southwesterly boundary line of the lands first above described; said lands situate above mean low water being lots A and B, as shown on plan by Hyde & Sherry, civil engineers, dated August 4, 1899, and entitled "Plan showing a portion of Long Island, Boston Harbor," containing approximately fifteen and one hundred and twenty-four thousandths (15.124) acres.

ELIHU ROOT, *Secretary of War.*

---

GENERAL ORDERS, No. 207.

HEADQUARTERS OF THE ARMY,
ADJUTANT-GENERAL'S OFFICE,
*Washington, December, 15, 1899.*

The following order from the War Department is published for the information and guidance of all concerned:

WAR DEPARTMENT, *Washington, December 15, 1899.*

The following-described tract of land situate in Red Lion Hundred, in the county of New Castle and State of Delaware, adjoining the military reservation of Fort Du Pont at Battery Point, Delaware, having been recently purchased for military purposes, is hereby announced as an addition to said military reservation, viz:

Beginning at the low-water mark of the Delaware River near Engineers Wharf, in line with east side of Government lane, about thirteen hundred and twenty-seven and three-tenths (1,327.3) feet in a northeasterly direction from a stone in the northwest corner of Government reservation; thence south forty-six degrees five minutes west thirty-two hundred and fifty and five-tenths (3,250.5) feet, more or less, to a corner in north line of Port Penn road; thence north forty-two degrees thirty minutes west one hundred and eigthy-eight and one-tenth (188.1) feet along north line of said road to a corner; thence north thirty-eight degrees and fifty-five minutes east one hundred (100) feet to a corner; thence north twenty-six degrees and thirty minutes west ninety-seven (97) feet to a corner; thence north thirty-eight degrees fifty-five minutes east seven (7) feet to a corner; thence north twenty-six degrees thirty minutes west two hundred and thirty-two (232) feet to a corner; thence south thirty-eight degrees fifty-five minutes west one hundred and five and five-tenths (105.5) feet to a corner in north line of Port Penn road; thence north twenty-six degrees thirty minutes west three hundred and seventeen and twenty-two hundredths (317.22) feet along north line of said road to a corner; thence north thirty-eight degrees fifty-five minutes east one hundred and sixty-one and four hundredths (161.04) feet to a corner; thence north forty-nine degrees forty minutes west eighty-five and eight-tenths (85.8) feet to a corner; thence south thirty-eight degrees fifty-five minutes west one hundred and twenty-eight and four hundredths (128.04) feet to intersection of north line at Port Penn road with east line of East Canal street; thence along east line of East Canal street north eleven degrees thirty minutes east seventeen hundred and forty-six (1,746) feet to a corner; thence south thirty-five degrees fifty minutes east ninety-five and one-tenth (95.1) feet to a corner; thence north forty-one degrees ten minutes east fifty-eight and thirty-eight hundredths (58.38) feet to a walnut tree; thence north forty-seven degrees twenty minutes east seventeen hundred eighty-one and thirty-one hundredths (1,781.31) feet, more or less, to low-water mark of Delaware River; thence along the low-water line of said river to point of beginning; containing one-hundred and eleven and five-tenths (111.5) acres, more or less.

Elihu Root, *Secretary of War.*

---

General Orders, No. 44.

Headquarters of the Army,
Adjutant-General's Office,
*Washington April 5, 1900.*

The following act of Congress is published for the information and government of all concerned:

An act making appropriations to supply additional urgent deficiencies in the appropriations for the fiscal year ending June thirtieth, nineteen hundred, and for prior years, and for other purposes.

* * * * * * *

WAR DEPARTMENT.

*Military Posts.*

That the provisions of section three hundred and fifty-five, Revised Statutes, are waived so far as they prohibit the expenditure of public money for the purpose of erecting public buildings on a tract of land recently acquired as a site for necessary buildings at Fort Du Pont, Delaware, before the consent of the legislature of the State of Delaware to the purchase has been given, it being impracticable to apply to the State legislature for consent to its purchase until its next session in January, nineteen hundred and one, and the buildings being urgently required for the shelter of troops.

Approved, March 30, 1900.

* * * * * * *

III. The following order from the War Department is published for the information and guidance of all concerned:

War Department, *Washington, April 17, 1900.*

The following-described land, heretofore acquired by purchase at various dates, situate on North Point, in the county of Baltimore and State of Maryland, and named Fort Howard in General Orders, No. 43, April 4, 1900, Adjutant-General's Office, is hereby announced a military reservation, viz:

All that tract of North Point, comprising 148½ acres, more or less, lying south of Denton Creek and south of a line running from a stake planted at the head of said creek north 72½ degrees, west 65.8 perches, to the waters of the Patapsco River (said line being the north line of the land conveyed to the United States by deed from Elizabeth Gunther, dated December 21, 1899), except that tract owned and used by the United States as a light house reservation.

Elihu Root, *Secretary of War,*

GENERAL ORDERS, No. 65.

HEADQUARTERS OF THE ARMY,
ADJUTANT-GENERAL'S OFFICE,
*Washington, May 12, 1900.*

I. The following from the War Department is published for the information and guidance of all concerned:

WAR DEPARTMENT, *Washington, May 11, 1900.*

The following-described lands, heretofore acquired by purchase at various dates, situate in South Portland, in the county of Cumberland, and State of Maine, are hereby announced as an addition to the military reservation at Fort Preble, Maine:

Beginning 4.36 feet south, 43 degrees east from a large iron bolt set in a stone on the southerly side of the Fort road, and at the northwest corner of the military reservation at Fort Preble; Maine, thence south 43 degrees east, along the westerly line of said reservation 350 feet to a bolt driven in the ground; thence south 47 degrees west 520.96 feet to a spike in a willow stump; thence north 40 degrees 58 minutes west 237.19 feet to an iron bolt in the ground; thence north 17 degrees 38 minutes east 151.3 feet along the Fort road to a drill hole in boulder by a willow tree; thence north 41 degrees 10 minutes east along the said road 382.17 feet to the point of beginning.

ELIHU ROOT, *Secretary of War.*

II. The following from the War Department is published for the information and guidance of all concerned:

WAR DEPARTMENT, *Washington, May 11, 1900.*

The following-described lands, comprising twenty-one and one-half acres, more or less, heretofore acquired by purchase at various dates, situate in Camp Elizabeth, in the county of Cumberland and State of Maine, is hereby announced as an addition to the military reservation at Fort Williams, Maine:

Beginning on the northeasterly side of the road known as Cape Cottage or Cape Elizabeth Shore Road at a point where a line drawn southwesterly from the seashore parallel with the northwesterly end of the stone mansion built by the late John Goddard, and running 47 feet distant northwesterly from the dressed stone corner of said end of said mansion intersects said road; thence north 64 degrees 30 minutes east 1,155 feet, more or less, parallel with said northwesterly end of said stone mansion and distant northwesterly 47 feet therefrom, as aforesaid, to low-water mark on the seashore; thence southeasterly by said low-water mark to the north line of the present military reservation; thence south 71 degrees 10 minutes west by the line of said reservation 330 feet, more or less, to a copper bolt in the ledge; thence south 17 degrees 10 minutes west along the line of said reservation 448 feet to a copper bolt set in the ledge; thence south 78 degrees 40 minutes west along the line of said reservation 839.5 feet to a copper bolt set in the ledge; thence on the same course 150.5 feet to said road at the northwest corner of said reservation; thence northerly along said road to the place of beginning.

ELIHU ROOT,
*Secretary of War.*

### GALVESTON, TEX.

In deficiency act, approved February 9, 1900 (General Orders, No. 18, 1900), under head of "Barracks and quarters," from the $1,000,000 therein appropriated for temporary buildings, etc., it is provided "that from the foregoing amount, if in the judgment of the Secretary of War the emergency exists, the sum of $130,000, or so much thereof as in his discretion may be necessary, shall be used for the purchase of a site or sites for the location of barracks for the accommodation of a garrison in charge of fortifications."

On February 21, 1900, the Galveston Land and Improvement Company offered a certain tract in the city of Galveston containing 60 acres more or less, including a house of 10 rooms on the land, also to have certain streets within the tract, containing same 10 acres, vacated for the Government, etc., for $126,000, which offer was accepted by the Secretary of War March 24, 1900; deed executed by said company April 17, 1900; favorable opinion regarding title rendered by Department of Justice, April 30, 1900, and money subsequently paid.

III. The following from the War Department is published for the information and guidance of all concerned (General Orders, No. 91, 1900):

WAR DEPARTMENT, *Washington, July 7, 1900.*

The United States having recently purchased for military purposes about sixty (60) acres of land adjacent to the forty-one and thirty-two one-hundredths (41.32) acres heretofore designated as the military reservation of Fort Crockett, Texas, the same is hereby announced as an addition to said reservation. The boundaries of the entire reservation are announced as follows:

Beginning at the northwest corner of out-lot 203 according to the Galveston City Company's map of the city of Galveston, now in common use, that being the southeast corner of the intersection of Fifty-third street and Avenue U; thence east along the south side of said Avenue U a distance of two thousand nine hundred and sixty (2,960) feet to the northeast corner of out-lot 206, being the southwest corner of the intersection of Forty-fifth street and Avenue U; thence southwardly along the west side of said Forty-fifth street a distance of one thousand two hundred and fifty (1,250) feet to the southeast corner of out-lot 231, being the northwest corner of the intersection of Forty-fifth street and Avenue W; thence continuing southerly on the west line of Forty-fifth street to the waters of the Gulf of Mexico; thence southwesterly along the waters of the Gulf of Mexico with the meanders thereof to the east side of Fifty-third street; thence north along the east side of Fifty-third street to the southwest corner of out-lot 253, that point being the northeast corner of the intersection of Avenue X and Fifty-third street; thence continuing north along the east side of Fifty-third street a distance of one thousand nine hundred and ten (1,910) feet to the place of beginning.

ELIHU ROOT,
*Secretary of War.*

Efforts are now being made to secure land at Fort Mott, Finns Point, N. J., Hawkins Point, Md., Sullivans Island, S. C., and Fort Constitution, N. H.

In connection with the two latter attention is invited to the following provisions of law:

GENERAL ORDERS, No. 77.

HEADQUARTERS OF THE ARMY,
ADJUTANT-GENERAL'S OFFICE,
*Washington, June 2, 1900.*

The following act of Congress is published for the information and government of all concerned:

AN ACT Making appropriations for fortifications and other works of defense, for the armament thereof, for the procurement of heavy ordnance for trial and service, and for other purposes.

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That the sums of money herein provided for be, and the same are hereby, appropriated, out of any moneys in the Treasury not otherwise appropriated, to be available until expended, namely:

FORTIFICATIONS AND OTHER WORKS OF DEFENSE.

* * * * * * *

For the purchase of suitable building sites, and improvements and leases thereon, necessary to properly provide for the garrison at Sullivans Island, Charleston, South Carolina, one hundred and thirty-five thousand dollars, or so much thereof as may be necessary: *Provided,* That no part of this sum shall be expended until valid title to all the land, and improvements and leases thereon, necessary for this purpose shall have been acquired by the United States. * * *

Approved May 25, 1900.

In sundry civil act of June 6, 1900 (General Orders, No. 84, 1900), under head of "Military posts" the following appears: "* * * and for the purchase of suitable building sites for said barracks and quarters, * * * and $30,000, or so much thereof as may be necessary for acquiring by purchase or condemnation the land in the square surrounding Fort Constitution at Newcastle, New Hampshire, to be used for barracks and quarters for troops."

General Orders affecting military reservations issued during the year have been as follows:

General Orders, No. 121, 1899, announces reservation limits of lands near city of Bismarck for post, target range, and sewer purposes.

General Orders, No. 123, 1899, designates new post near Spokane, Wash., as Fort Wright.

General Orders, No. 134, 1899, designates by name certain of new batteries which have been constructed along the seacoast:

Fort Strong, Mass.
Fort Banks, Mass.
Fort Terry, N. Y.
Fort Du Pont, Del.
Fort Pensacola, Fla.
Fort Rosecrans, Cal.
Fort Columbia, Wash.
Fort Casey, Wash.
Fort Armistead, Md.

General Orders, No. 138, 1899, designates by name:

Fort Flagler, Wash.
Fort Michie, Conn.

General Orders, No. 142, 1899, designates limits of reservation at Fort Gibbon, Alaska.

General Orders, No. 147, 1899, designates certain tracts of land set aside for military purposes in Oahu, Hawaiian Islands.

General Orders, No. 162, 1899, announces limits of certain lots recently acquired in connection with Fort Screven, Ga., reservation.

General Orders, No. 163, 1899, transfer of Fort Spokane, Wash., to Interior Department for Indian school purposes.

General Orders, No. 193, 1899, designates limits of Fort Myer, Va., reservation.

General Orders, No. 207, 1899, designates limits of certain lands recently acquired in connection with reservation at Fort Du Pont, Del.

General Orders, No. 213, 1899, designates limits of certain reserved tracts in Honolulu, Kona district, Oahu, Hawaiian Islands.

General Orders, No. 6, 1900, discontinues Fort Bayard, N. Mex., as a garrisoned post and transfers all buildings to the Surgeon-General for establishing a general hospital thereat.

General Orders, No. 8, 1900, creates or designates limits of Department of Alaska, with headquarters at Fort St. Michael.

General Orders, No. 13, 1900, announces reserved limits of so much of peninsula in district of Alaska, embracing Point Spencer, as lies northerly of the southerly boundary.

General Orders, No. 20, 1900, designates new post at Magnolia Bluff, near Seattle, Wash., as Fort Lawton.

General Orders, No. 28, 1900, discontinues Fort Sherman, Idaho, as a garrisoned post, with view to transfer of reservation to Interior Department.

General Orders, No. 43, 1900, designates by new names certain batteries recently constructed along seacoast.

General Orders, No. 44, 1900, publishes Congressional action authorizing erection of buildings on land recently acquired at Fort Du Pont, without waiting for State cession.

General Orders, No. 48, 1900, announces limits of the Eagle City, Alaska, reservation; publishes act for new post at Des Moines, Iowa, upon transfer to United States, without cost, of not less than 400 acres of suitable land, etc.

General Orders, No. 49, 1900, designates new post at Bismarck, N. Dak., as Fort Lincoln.

General Orders, No. 51, 1900, announces limits of additional lands recently purchased in connection with the Fort Columbia, Wash., reservation; announces limits of additional lands recently purchased on North Point, Maryland (Fort Howard); publishes act for new post near Sheridan, Wyo. (Fort Mackenzie), post to contain not less than 1,200 acres of lands belonging to the United States.

General Orders, No. 59, 1900, publishes President's action of April 30, 1900, transferring military reservation of Dry Tortugas, Fla., including Fort Jefferson, to the Navy Department.

General Orders, No. 73, 1900, directs certain corrections in General Orders, No. 43, 1900, and No. 134, 1899, regarding 12-inch battery reservation, Grovers Cliff, Massachusetts; reservation at Napatree Point, Rhode Island; 6-inch battery at Fort Totten, and battery at Santa Rosa Island, Florida.

## CUSTODIANS.

Custodians are employed and paid by the Quartermaster's Department in care of the following reservations:

Madison Barracks, target range, James Fleming, $15 per month.

Old Fort Omaha, O. E. Stearn, $45 per month.

Whipple Barracks, Ariz., A. G. Oliver, $60 per month.

Fort Custer, Mont., H. C. Bullard, $45 per month.

Fort Lincoln, N. Dak., Andrew J. Weide and Abram K. Sleeger, $40 per month each.

Fort Sherman, Idaho, Edward Eaton, $60 per month.

At Fort Townsend, Wash., J. W. Brown; at Fort Davis, Tex., J. L. Janes; at Monterey, Cal., Francis Dowd, serve without money consideration.

*List of military reservations turned over by the War Department to the Interior Department, or otherwise disposed of by the War Department, from 1858 to June 30, 1900, with date of relinquishment, authority therefor, etc.*

## MANILA.

Among the many stores and supplies furnished for troops serving in the Philippines, mention may be made of the following:

On urgent cable call from the chief quartermaster there were gathered from various points and shipped to Manila 9 odorless wagons, 198 closet troughs, and 188 urinal troughs, the approximated valuation of which, including certain spare parts also supplied, being $14,838.50.

## DISTILLING PLANTS.

Three large and six small plants have also been supplied at cost of $16,700.

### DESCRIPTION.

Large (capacity, each 3,800 gallons per day, 24 hours):
  3 distillers.
  6 25-horsepower boilers.
  3 (each) feed and circulating pumps.
  Storage tanks, filter tanks.
  Piping and fittings complete.
Small:
  Capacity, 600 gallons each 24 hours.
  Including with each plant, boiler, feed pump.
  Water-supply pump with 150 feet suction hose.
  Water-supply tank, 2 filters, 1 sponge filter, condensing and purifying apparatus.
  400-gallon storage tank, etc.

### SMITH CREMATORS.

Four of these cremators, which are designed for use in tropical climates as a sanitary measure to abolish the camp sink and to quickly destroy garbage and other refuse, have also been purchased and shipped, the expense thereof being met from island funds.

### WATERHOUSE-FORBES WATER STERILIZER.

This apparatus was examined by a board of officers in 1898, who found it of superior merit and that it was well adapted for abundant supply of sterile water to troops serving in the field; that the sample examined contained two heat exchanges and had a capacity of not less than 300 gallons of sterilized water per twelve hours, at a difference of only 4½° F. between the nonsterilized and the sterilized water, and was thought to be the size most suitable for issue.

They believed it to be capable of supplying a sufficiency of pure water for two companies serving in the field.

If in permanent camp and with the opportunity of accumulating a supply of sterilized water, it is believed one such apparatus would be equal to the need of a battalion.

Based thereupon, and on recommendation of the Surgeon-General, the Secretary of War, in August, 1899, authorized supply of 100 thereof for use of troops serving in the Philippines, at approximate cost of $10,000.

In April, 1900, this company submitted an improved model, which was also examined by the Medical Department.

This was also found to have much merit. Average capacity 21.66 gallons, capable of increase to 30 gallons per hour; difference in temperature between the inflowing and outflowing stream, 16° F. Weight reduced to less than 100 pounds, properly boxed; previous model weighing 125 pounds.

Based on cable call of department authorities, the Secretary of War authorized, in April last, purchase and shipment of 200 of this latter pattern, subject to some slight modifications, at a cost of $20,000, approximately.

### FILTERS.

One hundred and thirty-two Pasteur field, 82 Berkefeld, and 101 Maignen filters have been supplied.

### MISCELLANEOUS.

Various quantities of tools, pipe, fittings, hose, closets, etc., have been supplied, in connection with repair and maintenance of the water and sewer systems.

### REFRIGERATING PLANT.

The work in connection with this large and expensive plant, a brief description of which will be found on page 169, Quartermaster-General's Report for 1899, after many troublesome and unavoidable delays, is now, from latest reports received, well under way, and its completion is expected by February next, entire expense being borne from island funds.

## ICE MACHINES.

November 6, 1900, General Otis was directed from War Department to provide the subsistence department with cold storage at Iloilo, Jolo, and Cebu, to be paid for from Philippine funds.

In connection with above, Secretary of War in January last authorized Quartermaster's Department to provide shelter for the ice machinery at Cebu at cost of $3,000, expense to be charged to island funds.

## ALASKA.

Among the various articles supplied for troops serving in Alaska, mention may be made of two distilling plants of guaranteed capacity of 1,200 gallons potable water every twenty-four hours, at cost of $4,730, together with various spare parts, each plant being complete, with distiller, evaporator, circulating pump, feed pump, portable boiler, firing tools, smokestack, etc. Various quantities of pipe, fittings, tools, pumps, hose, packing, water and ash barrels have also been furnished, as also—

12 Pasteur field filters.
12 Maignen and Berkefeld filters.
24 ladders.
24 hand pumps.
15 Underwriters' extinguishers.
30 Johnson force pumps.
100 Kilfyre extinguishers.

## CHINA.

Since close of fiscal year mention may be made of the sending forward for use of troops serving in China of 50 Waterhouse-Forbes water sterilizers, the approximate cost of which was $5,000; also 6 small distilling plants of 600 gallons capacity each per twenty-four hours, at approximate cost of $11,000.

Each plant consisted of boiler, feed and supply pump, suction hose, supply and storage tank, 2 filters, 1 storage filter, condensing and pumping appurtenances, etc.

A large distilling plant of 3,800 gallons per day capacity with various spare parts has also been sent forward for use in China if needed.

If not so required, then it is to be used for troops serving in the Philippines.

## ARTESIAN WELLS.

Authority has been given during the year for the sinking of deep wells at the following points:

Fort Carroll, Md.
Fort Crook, Nebr.
Fort Caswell, N. C.
Fort Du Pont, Del.
Fort Flagler, Wash.
Fort Greble, R. I.
Fort Hunt, Va.
Hawkins Point, Va.
Jefferson Barracks, Mo.
Fort Mott, N. J.
Fort Pickens, Fla.
Fort Stevens, Oreg.
Fort Terry, N. Y.
Fort Washington, Md.
Fort Dade, Fla.
Fort De Soto, Fla.
Fort Howard, Md.

Some of these have proved a success, some otherwise, while work on others is now in progress.

The calls from the various military posts throughout the country for water, sewer, plumbing, lighting, and heating improvements and repairs have been voluminous, and total of the various estimates extremely heavy.

While the funds of the Department have not been sufficient to meet all these demands, all reasonable and absolute requirements, after careful study and consideration, have been fully and promptly met.

The various expenditures made through this branch of the office will be found of record among the tables and totals given in report of the construction and repair division, to which attention is invited.

Respectfully,

F. G. Hodgson,
*Major and Quartermaster, U. S. V.*

The Quartermaster-General,
*Washington, D. C.*

---

War Department,
Quartermaster-General's Office,
*Washington, August 15, 1900.*

General: I have the honor to submit a report of the operations of the inspection branch of this office for the fiscal year ended June 30, 1900.

The work under my supervision consists mainly of such matters as relate to the personnel of the quartermaster's department. This includes the officers of the department, both regular and volunteer; the post quartermaster-sergeants; the detachment of army-service men at Westpoint, N. Y.; the civilian employees of this office, and of the quartermaster's department-at-large, which embraces those governed by the civil service rules.

### OFFICERS OF THE QUARTERMASTER'S DEPARTMENT.

Under existing law the number of officers provided for this department is as follows:

| | | |
|---|---|---|
| Regular establishment: | | |
| Quartermaster-general, with rank of brigadier-general | 1 | |
| Assistant quartermasters-general, with rank of colonel | 4 | |
| Deputy quartermasters-general, with rank of lieutenant-colonel | 8 | |
| Quartermasters, with rank of major | 14 | |
| Assistant quartermasters, with rank of captain | 30 | |
| Military storekeeper, with rank of captain | 1 | |
| | | 58 |
| Volunteers: | | |
| Quartermasters, with rank of major | 30 | |
| Assistant quartermasters, with rank of captain | 40 | |
| | | 70 |
| Total, regulars and volunteers | | 128 |

It is provided in section 14 of the act approved March 2, 1899—

> That for each Regular Army officer of a staff, corps, or department, who may be retained in or appointed to a higher volunteer rank in said staff, corps, or department than that actually held by him in the regular establishment, there may be appointed one officer of volunteers of the lowest grade mentioned in this section for such staff corps or department, but no appointment shall be made which will increase the total number of officers, regular and volunteer, serving in any grade, above the number authorized by this act.

Under the authority of the above-mentioned law, 18 captains and assistant quartermasters of volunteers are now in service, occupying the places temporarily vacated by the same number of captains of the regular establishment, who have been given higher volunteer rank.

Of the 30 majors and quartermasters of volunteers now in the service, 18 were appointed from captains and assistant quartermasters of the Regular Army, 6 from officers of the line of the Regular Army, and 6 from civil life.

Of the 68 volunteer captains and assistant quartermasters in service, 14 were appointed from lieutenants of the line of the Regular Army and 44 from civil life and from volunteer organizations.

A full list showing all the officers serving in this department on August 15, 1900, giving their rank and station; and also a list giving the names of the volunteer quartermasters honorably discharged from the service since August 14, 1899, the date of my last statement, is submitted with this report.

At this date, August 15, 1900, the 128 officers of this department are distributed for duty as follows:

| | |
|---|---|
| In service in Alaska | 1 |
| In service in, and under orders for China | 7 |
| In service in Cuba | 13 |
| In service in Honolulu | 1 |
| In service in Japan | 1 |
| In service in Philippine Islands | 25 |
| In service in Porto Rico | 2 |
| In service at the general and sub-depots, in the 9 military departments, on construction duty at military posts within the United States, and on duty in the office of the Quartermaster-General | 49 |
| In service in the transport service | 21 |
| On leave, sick, and detached | 6 |
| Unassigned | 1 |
| Vacancy | 1 |
| Total | 128 |

Since the date of my last report, this department has suffered the loss of another of its efficient officers, Maj. Guy Howard, quartermaster, U. S. Volunteers (captain and assistant quartermaster, U. S. Army), who was killed by the Philippine insurgents on October 22, 1899, while in the discharge of his duties in the Philippines. His remains were brought home and laid at rest with military honors.

## POST QUARTERMASTER-SERGEANTS.

The present law limits the number of post quartermaster-sergeants to 105. This number is now in service and are distributed where they are most urgently needed. Many requests from military posts and stations for the services of these sergeants had to be denied during the past fiscal year by reason of the limited number available. It would surely be in the interest of the public service if Congress, at its next session, would authorize 150 of such sergeants in lieu of the present inadequate number, and I earnestly recommend that such action be taken as will accomplish that result.

### DETACHMENT OF ARMY SERVICE MEN, QUARTERMASTER'S DEPARTMENT, WESTPOINT, N. Y.

Maj. John B. Bellinger, quartermaster, U. S. Volunteers, commanding this detachment, reports in connection therewith as follows:

| | |
|---|---|
| Number of men in detachment July 1, 1899 | 139 |
| Number of men transferred or discharged during fiscal year ended June 30, 1900 | 38 |
| | 101 |
| Number of men enlisted in and transferred to detachment during fiscal year ended June 30, 1900 | 38 |
| Number of vacancies June 30, 1900 | 2 |
| Total | 141 |

Major Bellinger, commanding said detachment, states that all the members thereof performed their work efficiently and faithfully during the past fiscal year.

### CIVILIAN EMPLOYEES, QUARTERMASTER'S DEPARTMENT-AT-LARGE.

During the past fiscal year the force of civilian employees hired by the Quartermaster's Department was given the most critical examination, and such reductions made as to bring the number within the limits of the actual requirements of the service. Great care was exercised in selecting from the war emergency clerks and others holding temporary positions in the Quartermaster's Department-at-Large those to be retained in service and classified under the President's amendment of May 29, 1899, of the civil-service rules. The most efficient and best qualified of these employees, as shown by their two or more years of temporary service, were listed for retention and classification. This list, containing the names of 298 persons, was submitted to the honorable the Secretary of War and was approved by him on June 1, 1900, and later transmitted to the Civil Service Commission. These employees, therefore, were on that date added to the classified force of this department and made subject to the same civil-service rules as govern the other classified employees of the Quartermaster's Department-at-Large.

Under the act approved February 24, 1900, the following provision of law relating to civilian employees of the Quartermaster's Department was continued suspended until June 30, 1901, viz:

> *Provided*, That not more than one million dollars of the sums appropriated by this act shall be paid out for the services of civilian employees in the Quartermaster's Department, including those heretofore paid out of the funds appropriated for regular supplies, incidental expenses, barracks and quarters, army transportation, clothing, camp and garrison equipage; that no employee paid therefrom shall receive a salary more than one hundred and fifty dollars per month unless the same be specially fixed by law.

The condition of the public service, so far as it pertains to the Quartermaster's Department, has undergone such a radical change during the past two years that the provisions of the law above referred to do not now meet the requirements of this department or of the public service, and in lieu of a further suspension of said provisions it is recommended that Congress be asked to pass such legislation at its next session, covering this subject, as will fully and properly meet the present and probable future conditions of the service.

The expenditures from all the appropriations relating to the Quartermaster's Department for civilian employees required for all branches of the quartermaster's service has, by reason of the enlarged army and extension of service to Cuba, Porto Rico, Hawaii, and the Philippines, greatly increased. The approximate annual sum now expended for this purpose is about $7,000,000, which sum, if desired, can now be fixed by Congress in the next appropriation act for the support of the Army as the limit of such expenditure, in lieu of $1,000,000, as provided under the above-mentioned law.

Since the organization of the army transport service of this department, it has been found that it is not possible to secure the necessary marine superintendents, navigating officers, and other expert transport employees at a compensation of $150 per month, and therefore that limit, as fixed in the provision of law heretofore referred to, should be changed. To meet the requirements of the service in this particular, I recommend that Congress except from this limit all employees of this department who are paid from the appropriation "Army transportation," inasmuch as this appropriation is the only one pertaining to the Quartermaster's Department from which it is now found necessary to pay any employees a greater sum than $150 per month.

Very respectfully,

F. M. SCHREINER,
*Major and Quartermaster, U. S. Volunteers.*

The QUARTERMASTER-GENERAL OF THE ARMY.

---

WAR DEPARTMENT,
QUARTERMASTER-GENERAL'S OFFICE,
*Washington, September 17, 1900.*

GENERAL: I have the honor to report that during the fiscal year ended June 30, 1900, I have been on duty in this office, in charge of the regular-supplies branch, and pertaining to the work of which branch I respectfully submit the following report:

## REGULAR SUPPLIES.

This branch has charge of all matters relating to the procurement and distribution of supplies, stoves, and heating apparatus, and repair and maintenance of same, for heating barracks and quarters; of ranges, stoves, and apparatus for cooking; of fuel and lights for enlisted men, guards, hospitals, storehouses, and officers; of equipment of bakehouses to carry on post bakeries; of the necessary furniture, textbooks, paper, and equipments for the post schools; of the tableware and mess furniture for kitchens and mess halls for enlisted men; of forage and bedding for the public animals of the Quartermaster's

Department, and for the authorized number of officers' horses; of straw for soldiers' bedding; of stationery and blank books for the Quartermaster's Department, certificates for discharged soldiers, and blank forms for the Paymaster's and Quartermaster's departments; the purchase of cavalry and artillery horses, mules, harness, wagons, ambulances, etc., and all matters pertaining to wagon transportation of the Army, and of all the necessary correspondence connected with the work of this branch.

This branch has charge also of matters relating to all contracts to which the Quartermaster's Department is a party.

### CONTRACTS.

During the fiscal year ended June 30, 1900, 1,781 formal contracts were received, examined, and filed in this office. Seven hundred and ninety-nine were for 356,838,987 pounds of coal, 42,926 cords of wood, 9,350 bushels of charcoal, 1,273,036 pounds of corn, 31,038,505 pounds of oats, 2,684,000 pounds of barley, 40,000 pounds of middlings, 2,138,005 pounds of bran, 59,700,036 pounds of hay, and 5,682,700 pounds of straw; 19 for indefinite quantities of fuel and forage; 135 for buildings; 23 for repair of buildings; 30 for plumbing; 3 for gas piping; 34 for heating apparatus; 1 for electric elevator; 5 for machinery; 6 for electric fixtures; 1 for structural steel beams; 1 for saw logs; 31 for water and water supply; 10 for sinking wells; 1 for constructing water tanks; 1 for filtering apparatus; 1 for fresh-water distilling plant; 2 for refrigerating apparatus and ice plants; 1 for garbage crematory; 15 for sewerage; 1 for drainage; 6 for walks and roadways; 1 for inclosing fence; 2 for constructing walls; 1 for constructing railroad spur; 3 for constructing wharves; 1 for extending wharf; 1 for constructing bulkheads and retaining-walls; 221 for lease of lands and buildings; 210 for clothing and camp and garrison equipage; 1 for napthaline; two for petroleum paper; 4 for lockers; 9 for packing-boxes; 1 for casks, tierces, and barrels; 1 for hand litters; 38 for hire of vessels; 71 for transportation; 13 for repairs to means of transportation; 10 for wagons and wagon parts; 3 for harness; 4 for ranges; 4 for tableware and kitchen utensils; 5 for mineral oil; 1 for gasoline; 2 for illuminating gas; 3 for illuminating supplies; 6 for services; 15 for telephone service; 1 for record books; 12 for printing; 1 for typewriters; 3 for caskets; and 1 for headstones.

### PURCHASES AT GENERAL DEPOTS.

The following are the payments made by quartermasters for purchases for the Army at general depots, for use thereat, and for shipment elsewhere, during the fiscal year ended June 30, 1900, from appropriations pertaining to that period:

| Depot. | Regular supplies. | Incidental expenses. | Barracks and quarters. | Army transportation. | Total. |
|---|---|---|---|---|---|
| New York | $1,214,950.53 | $79,629.18 | $95,390.11 | $295,408.46 | $1,685,378.28 |

| San Francisco depot | 28 | $4,210.50 | $150.37 | 358 | $11,784.00 | 32.92 |
| Jeffersonville depot | 431 | 22,064.25 | 51.19 | 3,182 | 100,256,65 | 31.51 |
| Total | 459 | 26,274.75 | 57.24 | 3,540 | 112,040.65 | 31.65 |

NOTE.—The army ranges purchased at San Francisco had full outfit of fixtures and were of much larger size than those purchased at Jeffersonville. Those purchased at Jeffersonville were without fixtures.

During the last fiscal year there have been shipped to the Philippine Islands for use of the army there—

| | |
|---|---|
| Cavalry horses | 1,506 |
| Riding horses, for mounting infantry | 4,468 |
| Bell mares | 6 |
| Draft mules | 3,008 |
| Pack mules | 500 |

of which there were lost in transit 322 horses and 405 mules. There were also shipped—

| | |
|---|---|
| Escort wagons | 841 |
| Ambulances | 116 |
| Spring delivery wagons, covered | 78 |
| Light farm wagons | 25 |
| Dougherty spring wagons | 21 |
| Five-ton drays | 6 |
| Single sets wagon harness, half lead, half wheel | 4,616 |
| Single sets ambulance harness, half lead, half wheel | 372 |
| Sets 6-mule wagon harness | 56 |

## SAINT ASAPH DEPOT, VA.

There were repaired and painted at the Saint Asaph Depot, Va., during the fiscal year ended June 30, 1900—

| | |
|---|---|
| Escort wagons | 384 |
| "Farmer's handy wagons" | 15 |
| Spring wagons | 5 |
| Sprinkling carts | 2 |
| Sanitary wagons | 2 |
| Trucks | 2 |
| Sanitary excavating apparatus | 1 |
| Ambulances | 79 |

This transportation has been held for issue as required.

## SALE OF SURPLUS AND CONDEMNED ANIMALS.

| | Number. | Total proceeds. | Average. |
|---|---|---|---|
| HORSES. | | | |
| Cavalry (condemned) | 869 | $28,534.63 | $32.83 |
| Artillery (condemned) | 162 | 5,488.10 | 33.88 |
| Draft (condemned) | 174 | 8,690.75 | 49.95 |
| Surplus | 80 | 6,582.79 | 82.28 |
| Total | 1,285 | 49,296.27 | 38.36 |
| MULES. | | | |
| Condemned | 470 | 16,949.13 | 36.06 |
| Surplus | 1,461 | 137,261.87 | 93.95 |
| Total | 1,931 | 154,211.00 | 79.86 |

During the fiscal year there were 772 horses and 658 mules lost, died, stolen, etc.

There remained on hand at the close of the fiscal year June 30, 1900, according to the latest reports, 16,924 horses and 10,669 mules.

## ANIMALS ON HAND.

| | Horses. | Mules. |
|---|---|---|
| On hand July 1, 1899 | 12,622 | 13,158 |
| Purchased since | 6,359 | 100 |
| | 18,981 | 13,258 |
| Sold during fiscal year 1900 | 1,285 | 1,931 |
| Lost, died, strayed, and stolen | 772 | 658 |
| | 2,057 | 2,589 |
| Total remaining on hand June 30, 1900, according to latest reports received. | 16,924 | 10,669 |

It is remarked that no full reports in relation to animals have been received from the Philippines, and it is believed that when full reports are made the numbers above stated as remaining on hand June 30, 1900, will be somewhat modified.

## MEANS OF TRANSPORTATION.

The following statement shows the number and cost of public animals, wagons, and harness purchased from July 1, 1899, to June 30, 1900, inclusive:

| | Number. | Total cost. | Average cost, each. |
|---|---|---|---|
| Cavalry horses | 1,590 | $171,044.06 | $107.58 |
| Artillery horses | 106 | 14,950.50 | 141.04 |
| Riding horses, for mounting infantry | 4,650 | 354,645.37 | 76.26 |
| Draft horses | 11 | 1,813.00 | 164.82 |
| Bell horses | 2 | 100.00 | 50.00 |
| Pack mules | 100 | 6,000.00 | 60.00 |
| Army wagons | 100 | 10,600.00 | 106.00 |
| Escort wagons | 600 | 57,590.00 | 95.98 |
| Wagonettes, or other kinds | 17 | 3,994.00 | 234.94 |
| Ambulances: | | | |

After the declaration of peace with Spain, it appeared there would be a large number of surplus mules left on hand in excess of the needs of the service. Upon the authority of the Secretary of War, 1,461 of the number were sold, all realizing good prices, the average being $93.95 each. Upon the breaking out of troubles in the Philippines, it was ascertained that a large number of mules would be required on those islands, and the sales were discontinued. The department has been able to supply all mules necessary for draft purposes from those on hand without the purchase of additional ones.

During the year, a large number of wagons, ambulances, and harness, which had been left over from the Spanish-American war, were turned in to the St. Asaph and Chickamauga depots of the Quartermaster's Department, where all that were in such condition as to justify their repair were overhauled, painted, put into serviceable condition, and are being held in readiness for shipment to Manila. Those whose condition would not justify such repair, were sold at public auction after due advertisement, and the money received turned into the United States Treasury.

I am, General, very respectfully,

J. Z. Dare,

*Captain and Assistant Quartermaster, U. S. Volunteers.*

### OF THE

# ACTING COMMISSARY-GENERAL OF SUBSISTENCE.

---

War Department,
Office Commissary-General of Subsistence,
*Washington, D. C., October 23, 1900.*

Sir: I have the honor to submit the following report of the operations of the Subsistence Department for the fiscal year ending June 30, 1900.

## RESOURCES AND EXPENDITURES.

The following statement exhibits the aggregate fiscal resources and expenditures of the department, and the balances at the close of the fiscal year 1900:

### RESOURCES.

| | | |
|---|---|---|
| Amounts in the Treasury to the credit of the appropriations of the Subsistence Department, June 30, 1899: | | |
| Subsistence of the Army, 1898 | $25,147.31 | |
| Subsistence of the Army, January 1, 1899 | 139,494.59 | |
| Subsistence of the Army, 1899 | 6,661,443.40 | |
| | | $6,826,085.30 |
| Amounts to the credit of officers of the Subsistence Department and of officers doing duty in the Subsistence Department with the Treasurer, assistant treasurers, designated depositaries, and fiscal agents of the Government, and in their personal possession, on June 30, 1899, as follows: | | |
| Subsistence of the Army, 1898 | 2,446.66 | |
| Subsistence of the Army, January 1, 1899 | 351,625.81 | |
| Subsistence of the Army, 1899 | 1,054,507.03 | |
| | | 1,408,579.50 |
| Amounts refunded to the Treasury near close of fiscal year 1899, since carried to the credit of the appropriations, as follows: | | |
| Subsistence of the Army, 1898 | 413.41 | |
| Subsistence of the Army, January 1, 1899 | 62,618.63 | |
| Subsistence of the Army, 1899 | 239,697.36 | |
| | | 302,729.40 |
| Amounts appropriated for the subsistence of the Army for the fiscal year ending June 30, 1900, as follows: | | |
| Subsistence of the Army, 1900, act March 3, 1899 | 9,752,621.09 | |
| Subsistence of the Army, 1897, deficiency act June 6, 1900 | 12.50 | |
| | | 9,752,633.59 |
| Amount erroneously dropped in last annual report, as carried to the surplus fund, June 30, 1899, now taken up: | | |
| Relief of sufferers from overflow of Mississippi River and its tributaries and Red River of the North, act April 7, 1897 | | 123,963.73 |

| | | |
|---|---|---|
| Transfer from subsistence of the Army, 1899, to subsistence of the Army, 1900, deficiency act February 9, 1900 | | $4,000,000.00 |
| Amounts collected from various sources and refunded to the appropriations of the Subsistence Department on the books of the Treasury, during fiscal year 1900, as follows: | | |
| Subsistence of the Army, 1897, and prior years | $16.02 | |
| Subsistence of the Army, 1898 | 8,818.30 | |
| Subsistence of the Army, January 1, 1899 | 56,260.85 | |
| Subsistence of the Army, 1899 | 39,386.93 | |
| Subsistence of the Army, 1900 | 423,340.75 | 527,822.85 |
| Amounts charged against officers still in the service, on account of funds and stores alleged to have been lost by theft, etc., for which relief can only be obtained in the Court of Claims, under sections 1059 and 1062, Revised Statutes, or from Congress, as follows: | | |
| Subsistence of the Army, 1880 | 75.92 | |
| Subsistence of the Army, 1889 | 24.04 | |
| Subsistence of the Army, January 1, 1899 | 195.18 | |
| Subsistence of the Army, 1899 | 848.27 | 1,143.41 |
| Amounts received by officers of the Subsistence Department and by officers doing duty in the Subsistence Department from sales of subsistence stores to the following purchasers during the fiscal year 1900, and taken up for immediate disbursement, under the following appropriations: | | |
| Subsistence of the Army, 1898: Sales to officers | 106.89 | |
| Subsistence of the Army, January 1, 1899: Sales to officers, $311.65; to enlisted men, companies, detachments, and hospitals, $241.93 | 553.58 | |
| Subsistence of the Army, 1899: Sales to officers, $71.09; to enlisted men, companies, detachments, and hospitals, $819.57; unclassified sales, $843.04; for meals on transports, $831 | 2,564.70 | |
| Subsistence of the Army, 1900: Sales to officers, $685,077.34; to enlisted men, companies, detachments, and hospitals, $1,526,732.71; to civilian employees, $84,815.45; at auction, stores, $52,353.96; at auction, property, $451.68; to destitute flood sufferers, $2,214.86; of boxes, barrels, etc., $2,679.53; of garden seeds, etc., $54.35; to Quartermaster's Department, $1,043.43; to post exchange, $114,100.90; to Indians, $1,085.35; for meals on transports, $114,767.96; to naval officers and enlisted men, $28,604.12; to United States Boundary Commission, $77.10; unclassified sale collections, $25,402.79; to bakery, $10.05; to Indian agents and employees, $2,643.86; to Cuban rural police, $830.31; to patients in hospitals, $4.40; Cuban rations, $79,279.04; special sales, $5,099.49 | 2,727,328.68 | 2,730,553.85 |
| Amounts taken up by officers doing duty in the Subsistence Department, on account of reclamations for stores lost, damaged, etc.; in correction of errors in their accounts, etc., as follows: | | |
| Subsistence of the Army, 1898 | 2.02 | |
| Subsistence of the Army, January 1, 1899 | 100.00 | |
| Subsistence of the Army, 1899 | 488.32 | |
| Subsistence of the Army, 1900 | 8,823.27 | 9,413.61 |
| Amount taken up by officers as gains—Subsistence of the Army, 1900 | | 1,314.12 |
| Total resources | | 25,684,239.36 |

## EXPENDITURES.

| | | |
|---|---|---|
| Amounts expended on the books of the Treasury from the appropriations of the Subsistence Department during the fisal year 1900, as follows: | | |
| Subsistence of the Army, 1897 | $12.50 | |
| Subsistence of the Army, 1898 | 839.50 | |
| Subsistence of the Army, January 1, 1899 | 113,017.10 | |
| Subsistence of the Army, 1899 | 1,111,136.00 | |
| Subsistence of the Army, 1900 | 112,833.45 | |
| Relief of sufferers from overflow of the Mississippi River and its tributaries and Red River of the North, joint resolution approved April 7, 1897 | 1.67 | |
| | | $1,337,840.22 |
| Amounts disbursed by officers of the Subsistence Department and officers doing duty in the Subsistence Department during the fiscal year 1900, as follows: | | |
| Subsistence of the Army, 1898 | 936.22 | |
| Subsistence of the Army, January 1, 1899 | 30,536.37 | |
| Subsistence of the Army, 1899 | 336,410.77 | |
| Subsistence of the Army, 1900 | 12,456,310.24 | |
| | | 12,824,193.60 |
| Amounts dropped by officers doing duty in the Subsistence Department in correction of errors in their accounts during the fiscal year 1900, as follows: | | |
| Subsistence of the Army, January 1, 1899 | 1.28 | |
| Subsistence of the Army, 1899 | 209.50 | |
| Subsistence of the Army, 1900 | 3,506.02 | |
| | | 3,716.80 |
| Amounts lost by defalcation of officer: | | |
| Subsistence of the Army, 1899 | 1,878.99 | |
| Subsistence of the Army, 1900 | 2,181.68 | |
| | | 4,060.67 |
| Amounts carried to the surplus fund on June 30, 1900, act June 20, 1874: | | |
| Subsistence of the Army, 1897, and prior years | 16.02 | |
| Subsistence of the Army, 1898 | 33,943.27 | |
| | | 33,959.29 |
| Amount transferred from subsistence of the Army, January 1, 1899, to pay of the Army, 1900, urgent deficiency act, February 9, 1900 | 368,000.00 | |
| Amount transferred from subsistence of the Army, 1899, to pay of the Army, 1900, urgent deficiency act, February 9, 1900 | 2,000,000.00 | |
| Amount transferred from subsistence of the Army, 1899, to subsistence of the Army, 1900, urgent deficiency act, February 9, 1900 | 4,000,000.00 | |
| | | 6,368,000.00 |
| Total expenditures | | 20,571,770.58 |

## BALANCES.

| | | |
|---|---|---|
| Amounts in the Treasury to the credit of the appropriations of the Subsistence Department, June 30, 1900: | | |
| Subsistence of the Army, January 1, 1899 | $58,873.41 | |
| Subsistence of the Army, 1899 | 502,835.79 | |
| Subsistence of the Army, 1900 | 3,197,711.65 | |
| Relief of sufferers from overflow of Mississippi River and its tributaries and Red River of the North, act April 7, 1897 | 123,962.06 | |
| | | $3,883,382.91 |

| | | |
|---|---|---|
| Amounts to the credit of officers of the Subsistence Department and of officers doing duty in the Subsistence Department with the Treasurer, assistant treasurers, designated depositaries and fiscal agents of the Government, and in their personal possession on June 30, 1900, as follows: | | |
| Subsistence of the Army, 1898 | $1,215.60 | |
| Subsistence of the Army, January 1, 1899 | 26,034.54 | |
| Subsistence of the Army, 1899 | 44,362.54 | |
| Subsistence of the Army, 1900 | 1,096,264.30 | |
| | | $1,167,876.98 |
| Amounts refunded to the Treasury near close of fiscal year 1900, but not carried to the credit of the appropriations by June 30, 1900, as follows: | | |
| Subsistence of the Army, January 1, 1899 | 13,995.58 | |
| Subsistence of the Army, 1899 | 1,449.33 | |
| Subsistence of the Army, 1900 | 44,431.51 | |
| | | 59,876.42 |
| Amounts charged against officers on account of funds alleged to have been lost by theft, etc., for which relief can only be obtained in the Court of Claims, under sections 1059 and 1062, Revised Statutes, or from Congress, as follows: | | |
| Officers still in service: | | |
| Subsistence of the Army, 1880 | 75.92 | |
| Subsistence of the Army, 1889 | 24.04 | |
| Subsistence of the Army, 1899 | 308.27 | |
| Subsistence of the Army, 1900 | 189.06 | |
| Officers out of service: | | |
| Subsistence of the Army, January 1, 1899 | 195.18 | |
| Subsistence of the Army, 1899 | 540.00 | |
| | | 1,332.47 |
| Total balances | | 5,112,468.78 |

In the expenditures above reported for the fiscal year 1900 the following items of disbursements are included, viz:

Commutation of rations to enlisted men stationed where rations can not be conveniently issued, $165,801.75; commutation of rations to ordnance sergeants at posts not garrisoned, $3,556.33; commutation of rations to enlisted men on furlough, $41,012.83; commutation of rations to enlisted men while traveling, $67,127.60; meals for recruiting parties and recruits and troops moving, $194,227.87; liquid coffee for troops traveling, $49,189.06; advertising, $3,906.10; printing, $1,065.39; rent of telephones, $1,585.02; commercial newspapers, $16.80; 44,370,519 pounds of ice for issue to troops and refrigerating purposes, $112,891.62.

## HOSPITAL ISSUES.

The supplies purchased and issued from stock on hand during the fiscal year, for enlisted men in hospital too sick to use the army ration, amounted in value to $537,210.55. Issues of articles differing from the articles of the ration to enlisted men in camp during periods of low condition of health consequent upon service in unhealthy regions or in debilitating climates were not made until near the close of the fiscal year, and did not amount to very much in money value.

## LOSSES OF SUBSISTENCE STORES IN OCEAN TRANSPORTATION.

Considerable losses of subsistence stores occurred during the calendar year 1899 in shipments made from San Francisco to Manila. Upon urgent presentation of the facts to the appropriate authorities the proper remedies were applied, and causes of complaints of this character thereafter ceased to a marked degree.

The subsistence stores and property reported as damaged and lost from natural and other causes on vessels of the entire transport service during the fiscal year 1900 amounted in value to $184,392.01. There has been collected from persons responsible for the preventable losses and from the sales of damaged stores the sum of $22,230.50.

In addition to the above, a great loss of subsistence stores occurred by marine disaster to the steamer *Morgan City*, which sailed from San Francisco August 10, 1899, for Nagasaki, Japan. The vessel struck on a rock in the Inland Sea on September 3, 1899, and it and the cargo became a total loss. The subsistence stores aboard amounted to 508 tons in weight. Upon telegraphic information of the loss these stores were ordered to be duplicated from New York and San Francisco on September 6, 1899.

### OTHER LOSSES OF STORES AND PROPERTY.

The value of the supplies lost by accident, by wastage in transportation, while in store, etc., during the year, for which no one was held responsible, as shown by returns thus far examined, was $68,028.52.

Like losses which occured during the preceding fiscal year, but which were not included in annual report for that year, amounted to $55,266.66.

Supplies lost during the year, the responsibility for which was fixed upon the proper parties as shown by returns thus far examined, amounted to $10,010.80; of which $1,654.63 has been reported as collected, leaving still to be collected $8,356.17.

### SALES OF CONDEMNED STORES AND PROPERTY.

From the returns thus far received and examined the stores condemned and sold in the fiscal year ended June 30, 1900, are shown to have been as follows:

| | Subsistence stores condemned. |
|---|---|
| Original cost of stores condemned | $298,164.79 |
| Amount realized from sales of such as were ordered sold | 102,362.46 |
| Loss | 195,802.33 |

From sales of condemned subsistence property there was realized the sum of $451.68.

### SALES ON CREDIT TO OFFICERS AND ENLISTED MEN.

Sales on credit to officers of both the Regular and Volunteer Army in the fiscal year ending June 30, 1900, as shown by the accounts thus far received, amount to $18,897.91, and the amounts thus far reported as collected on pay accounts and otherwise settled amount to $13,571.25, leaving the sum of $5,326.66 yet to be collected. The sales on credit to enlisted men of both Regular and Volunteer Army amount to $39,154.85. The collections by the pay department on muster and pay rolls and on final statements on account of credit sales in the current and previous fiscal years amount, June 30, 1900, to $34,270.69, leaving a balance yet to be collected of $4,884.16. Sales on credit to enlisted men of both Regular and Volunteer Army during the fiscal year 1899, not heretofore reported by reason of delay in receipt of accounts, amount to $3,292.28, and the collections on same account to $4,036.53, leaving still to be collected on account of credit sales in that year $2,730.71.

### FLOOD SUFFERERS ON THE LOWER BRAZOS, TEXAS.

With the authority of the Acting Secretary of War of June 17, 1899, the commanding officer at Fort Sam Houston, San Antonio, Tex., was directed by the commanding general of the Department of Texas on July 6, 1899, to place at the immediate disposal of the governor of Texas 10,000 rations for benefit of flood sufferers on the Lower Brazos. On same date, at the urgent request of the governor, 10,000 additional rations were ordered sent from San Antonio, making 20,000 in all. All rations were sent to Richmond, Tex. On August 2, 1899, the acting chief commissary, Department of Texas, received from the governor of Texas the sum of $2,214.86 in full payment of the rations above referred to.

### STORM SUFFERERS IN PORTO RICO.

On the 8th of August, 1899, a hurricane of unusual severity swept over the island of Porto Rico, destroying everything in its path and rendering destitute over 100,000 souls. On account of impending famine and to relieve distress by food issues, the Secretary of War, on August 11, 1899, directed the sending by first transport to San Juan for distribution, under the direction of the commanding general of the department, to the destitute population 600,000 pounds each of beans and rice. Instructions were immediately communicated to the purchasing commissary at New York City, and the stores were shipped on the transport *McPherson* August 14, 1899.

This was followed by another order of the Secretary of War on August 15, 1899, directing the purchase and distribution to destitutes of 300,000 pounds codfish. This was ordered sent from New York on same date, and was sent by transport *McClellan* on August 23, 1899. Similar purchases were directed at various times thereafter by the Secretary of War and many of them sent in weekly shipments. In addition to the above, the Secretary of War on August 26, 1899, directed the issue to destitutes of 12,000 pounds hard bread, 5,000 pounds corn meal, 600 cans beef, 10,000 cans beans, which were reported by the chief commissary, Department of Porto Rico, as on hand as surplus and rapidly deteriorating. On June 21, 1900, the Secretary of War, on the recommendation of the commanding general, Department of Porto Rico, directed him to cease distribution of rations in Porto Rico on the 15th of July, 1900.

Lieut. Col. F. E. Nye, assistant commissary-general of subsistence, chief commissary of the Department of Porto Rico, in his annual report to the adjutant-general of the department, states as follows:

> The subsistence stores at Aibonito and Humacao were destroyed, and those at the depot at Ponce and the posts of Adjuntas, Cayey, Lares, and Manati were damaged to such an extent as to be practically useless for issues and sales. Fortunately the

main storehouse at San Juan was only slightly damaged and a part of the three months' supply kept on hand for troops on the island was available for issue to the destitute until supplies could be brought from the United States.

The following is a list of the supplies purchased by the Subsistence Department in the United States and shipped to this island, together with their money value, for distribution to the people rendered destitute, which list, however, does not include articles of food, clothing, and other needful supplies contributed by the people of the United States, viz:—

| | | | | | |
|---|---|---|---|---|---|
| Bacon | pounds | 1,098,914 | Pease | pounds | 455,696 |
| Hard bread | do | 268,080 | Oatmeal | do | 15,258 |
| Corn meal | do | 5,900 | Hominy | do | 30,400 |
| Beans | do | 8,695,916 | Crackers | do | 327¼ |
| Rice | do | 14,483,966 | Tongue, beef | 2-pound cans | 2,268 |
| Codfish | do | 2,868,498 | Roast beef | pounds | 2,560 |
| Fish: | | | Do | 2-pound cans | 368 |
| Hake | do | 51,200 | Do | 6-pound cans | 8 |
| Haddock | do | 28,928 | Corned beef | pounds | 15,953 |
| Beans, baked | 3-pound cans | 11,856 | Beef, boiled | do | 21 |

the cost price of which amounted to $824,828.12. These supplies were all turned over to Maj. Thomas Cruse, quartermaster, United States volunteers, for distribution under instructions of the board of charities instituted by General Orders, No. 116, from headquarters Department of Porto Rico, dated August 12, 1899.

The period of time during which these supplies were distributed extended from August 15, 1899, to July 15, 1900, when, pursuant to instructions received from the Headquarters of the Army, dated June 21, the distribution was discontinued.

In addition to the articles enumerated above, there were furnished from supplies on hand at the posts on the island to meet immediate wants pending the arrival of supplies from the United States—

| | | | | | |
|---|---|---|---|---|---|
| Fresh beef | pounds | 5,504½ | Sugar | pounds | 2,067 |
| Bacon | do | 3,720 | Vinegar | gallons | 115 |
| Pickled mackerel | do | 326½ | Salt | pounds | 198 |
| Flour | do | 19,172 | Pepper | do | 54 |
| Hard bread | do | 60,740 | Soap | do | 523 |
| Baking powder | do | 96 | Apples, evaporated | do | 503 |
| Beans | do | 1,249 | Milk | cans | 48 |
| Rice | do | 977 | Peaches, evaporated | pounds | 481 |
| Hominy | do | 42 | Prunes | do | 484 |
| Potatoes | do | 8,533 | Salmon | cans | 988 |
| Onions | do | 2,293 | Sugar: | | |
| Tomatoes | 3-pound cans | 386 | Cut loaf | pounds | 88 |
| Do | gallons | 180 | Granulated | do | 24 |
| Coffee, green | pounds | 1,268 | Matches | boxes | 108 |

the money value of which amounted to $6,652.04.

The total money value of all issues of subsistence stores thus made during the period from August 15, 1899, to July 15, 1900, was as follows:

| | |
|---|---|
| Subsistence stores sent from New York | $824,828.12 |
| Subsistence stores issued to meet immediate wants pending arrival of stores from New York | 6,652.04 |
| Total | 831,480.16 |
| There has been reimbursed from the appropriation "Emergency fund" the sum of | 400,776.65 |
| Leaving a balance still due to the appropriation "Subsistence of the Army, 1900" of | 430,703.51 |

### ISSUES TO INDIANS.

Upon the recommendation of the commanding officer at Fort Clark, Tex., of July 22, 1899, that authority be given for the issue of rations to the Seminole negro Indians living on the military reservation at Fort Clark, until such time as they could become self-supporting by the raising of crops or until some other arrangement could be made for a permanent home for them, the Secretary of War authorized the issue for such period as the department commander might deem necessary, not exceeding four months. On January 6, 1900, a further continuance of this issue was authorized by the Secretary of War and the issue ceased on March 19, 1900. The value of the rations issued to these Indians was $3,313.37.

In addition to the above, subsistence stores were issued to the Apache Indians at Fort Sill, Okla., under the appropriation act of March 3, 1899, to the value of $11,225.39; and to destitute Alaska Indians to the value of $315.30.

### CUBAN SCHOOL TEACHERS.

In obedience to instructions of the Secretary of War of April 25, 1900, the purchasing commissary at New York was informed that arrangements had been made to transport early in June, 1900, 1,450 school teachers from Cuba to Boston and return, and that subsistence would be provided for them in the saloon mess while en route to Boston and returning therefrom. The steamers engaged in transporting them to Boston were the *Sedgwick*, *McClellan*, *Crook*, *McPherson*, and *Burnside*. The steamers engaged in transporting them from Boston, via New York and Philadelphia, to Cuba were the *Sedgwick*, *Rawlins*, *Crook*, and *McPherson*. The actual number subsisted on the trip to Boston was 1,279; the number of meals served was 25,399; aggregate cost, $3,849.53; cost per meal, 0.1514 cents. The actual number subsisted on the trip from Boston was 1,308; the number of meals served, 60,068; aggregate cost, $8,556.24; cost per meal, 0.1424 cents. The purchasing commissary at New York states that the reports from all the transport commissaries show that the teachers had ample food, and there were no complaints as to quality or quantity of food served. He also states that the time required for the return voyage exceeded the previous one, owing to the delay in New York, Philadelphia, and Habana, and distribution to various ports after leaving Habana. Reimbursement from the revenues of the island of Cuba to the appropriation "Subsistence of the Army, 1900," in the sum of $3,849.53 has been made, and request for similar reimbursement to the appropriation "Subsistence of the Army, 1901," in the sum of $8,556.24, was submitted to the Secretary of War September 22, 1900.

### SPECIAL ISSUES.

Special issues were made up to June 30, 1900, as follows:

| To whom issued. | Value. | Refunded. |
|---|---|---|
| United States Marines at San Juan, Porto Rico | $3,207.00 | $2,825.62 |
| United States Navy, on transport Ohio | 3,615.60 | 3,615.60 |
| United States Navy, Paymaster Sullivan | 970.38 | 970.38 |
| United States transport Indiana | 173.75 | 173.75 |
| Civil government, Island of Cuba | 175.51 | .......... |
| Provost-marshal-general, Manilla (for prisoners) | 343.46 | 343.46 |
| United States tug Reno (by Col. C. A. Woodruff, December, 1899) | 125.37 | 125.37 |
| United States tug Kanawha (by Col. C. A. Woodruff, December, 1899, and January, 1900) | 281.92 | .......... |
| Total | 8,892.99 | 8,054.18 |

### GRATUITOUS ISSUES.

Gratuitous issues were made as follows:

| To whom issued. | Value. |
|---|---|
| Destitute Cubans (not reported in fiscal year 1899) | $79,414.85 |
| Destitute Cubans (fiscal year 1900) | 38,930.77 |
| Destitute Filipinos | 5,508.16 |
| Destitute Filipinos in exchange for work on public roads | 43.59 |
| Spanish refugees in Philippines | 1,949.10 |
| Insurgent prisoners in Philippines (not reported in fiscal year 1899) | 186.44 |
| Insurgent prisoners in Philippines (fiscal year 1900) | 47,291.13 |
| Destitute miners in Alaska | 818.32 |
| Naval detachment in charge of launch for military operations at Manila | 12.08 |
| Naval detachment on patrol duty during quarantine at Fort Monroe, Va., yellow fever epidemic | 9.28 |
| Total | 174,163.22 |

### MISCELLANEOUS ISSUES.

Miscellaneous issues were made as follows:

| To whom issued. | Rations. |
|---|---|
| Citizen prisoners | 1,467 |
| Destitute citizens | 7,844 |
| Civilian employees | 2,433,530 |
| Military convicts (general prisoners at various military posts) | 255,197 |
| Total | 2,697,538 |

### SUBSISTENCE FUNDS HELD IN HAND FOR READY DISBURSEMENT.

I had the honor at the last session of Congress to invite attention to the necessity of obtaining legislation which would permit subsistence officers, especially those on duty in cities where the Treasuer of the United States and the assistant treasurers of the United States are located, to hold in their personal possession, for meeting the numerous small money demands from soldiers on furlough, soldiers traveling on duty, recruits setting out to join their companies, etc., small amounts of public funds of the appropriation "Subsistence of the Army." The condition of the law and of the regulations on the subject is fully set forth in House Doc. No. 309, Fifty-sixth Congress, first session, and in Senate Report No. 412, same session, and a bill (S. 2870) giving authority to all officers intrusted with the disbursement of subsistence funds to hold restricted amounts of such funds in their personal possession, passed the Senate March 24, 1900, and was referred to the Committee on Military Affairs of the House on March 27, 1900, but was not reached for action. I urgently request the honorable the Secretary of War to use endeavors to have the bill passed at the coming session, as the measure is not only one which is promotive of discipline but is one of justice to enlisted men. The bill as it passed the Senate was in the form recommended by this office, and was as follows:

AN ACT concerning disbursing officers of the Subsistence Department of the Army.

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That officers intrusted with the disbursement of funds for the subsistence of the Army are hereby authorized to keep, at their own risk in their personal possession for disbursement, such restricted amounts of subsistence funds for facilitating payments of small amounts to public creditors as shall from time to time be authorized by the Secretary of War.

## SERVICES OF THE SUBSISTENCE DEPARTMENT IN CUBA.

All subsistence supplies required for posts in Cuba have been furnished from New York on calls made direct by the chief commissary on the purchasing commissary at that place except articles that are procurable on the island, which the chief commissary, Division of Cuba, is authorized to purchase if found suitable and of less or equal cost of like articles obtained and shipped from the home markets. Fresh beef and vegetables are purchased under contract.

Refrigerated beef was supplied to but four points under the contract—Habana, Quemados, Matanzas, and Santiago—and freshly slaughtered beef to all other posts. The quality and condition of the cattle slaughtered varied somewhat in different portions of the island, but constant and continual supervision on the part of the officers and occasional rejection of the beef have resulted on the whole in a satisfactory service.

Several efforts were made during the year to have refrigerated beef substituted at several of the posts fairly adjacent to a refrigerating plant, but without success.

The chief commissary of the division reports that the contract for potatoes and onions has been very satisfactorily carried out through the contractors' agent in Habana, who promptly filled all the requisitions.

Experience has shown that the native (Irish) potato can not be relied on, though for some months in the year it is preferable to old potatoes from the States or elsewhere.

The onions raised in Cuba—when in the market—can not be excelled, and have been supplied whenever available.

In his report of an inspection of Columbia Barracks, Cuba, made September 9 to November 15, 1899, Maj. Frank H. Edmunds, acting inspector-general, Department of the Province of Habana and Pinar del Rio, says:

> Too much praise can not be given the Subsistence Department for the manner in which it is supplying the troops serving in the tropics. It would be difficult to name any article of food which necessity demands or fancy could desire which is not to be had for the asking, and of quality the best. The finest grade of refrigerated beef is constantly on hand for issue and for sale to the troops and officers of this post.

### RATIONS TO CUBAN DESTITUTES.

The following rations were issued to destitute Cubans during the year ending June 30, 1900:

| | |
|---|---|
| Department of Habana and Pinar del Rio: | |
| Red Cross orphan asylums | 183,610 |
| Other hospitals and asylums | 37,424 |
| Towns | 200,700 |
| Department of Matanzas and Santa Clara charitable institutions | 344,058 |

and following issues of fresh beef to charitable institutions: 208,672 pounds, value $26,858.70.

From September 29, 1899, to December 13, 1899, the Cuban ration, under authority of the division commander, dated April 6, 1899, was as follows: In each 100 rations there were 50 pounds of bacon or tinned meat, 50 pounds of hard bread or flour, 6 pounds of coffee, 4 pounds of soap, 15 pounds of rice, 10 pounds of sugar, and in addition, for the sick, there were 24 cans of milk and 24 cans of soup.

Under General Order 49, Division of Cuba, December 13, 1899, the Cuban ration was as follows: In each 100 rations there were 25 pounds of flour or hard bread, 50 pounds of bacon or tinned meat, 20 pounds of rice, 10 pounds of beans, 4 pounds of salt, 4 pounds of soap, and in addition, for the sick, there were 10 cans of milk.

The sum of $8,072.93, for payment of these Cuban rations, was transferred to the chief commissary, Division of Cuba, by the treasurer of the island of Cuba out of the funds of the island.

### SERVICES OF THE SUBSISTENCE DEPARTMENT IN PORTO RICO.

All subsistence supplies required for posts in Porto Rico have been furnished from New York on calls made direct by the chief commissary, Department of Porto Rico, on the purchasing commissary at that place, except articles that are procurable on the island, which the chief commissary is authorized to purchase, if found suitable and of less or equal cost of like articles obtained and shipped from the home markets. Fresh beef and vegetables are purchased under contract.

Lieut. Col. F. E. Nye, assistant commissary-general of subsistence, has been on duty during the past fiscal year as chief commissary, Department of Porto Rico, and as purchasing commissary at San Juan. He has administered the affairs of the subsistence department, and, in addition to his regular duties, he turned over to Maj. Thomas Cruse, quartermaster, all stores for relief of destitute sufferers in Porto Rico. In his annual report to the adjutant-general of the Department of Porto Rico for the fiscal year 1900 he says:

*Storehouses.*—Since the last report the number of posts have been considerably reduced and the storehouses are in excellent condition, new ones having been built at several posts.

*Supplies.*—With the exception of vegetables, coffee, and sugar, the supplies are purchased in the United States; one month's supply is kept on hand at posts and one month's in depot. All supplies are received at the depot at San Juan, and from there shipped direct to the posts. The stores on hand are generally in good condition and of excellent quality. Ice has been issued to the troops wherever this could be done, at the rate of 100 pounds per day to each company. (Since increased to 150 pounds.) Sales are made to civilian employees of the Army and to others having special authority from the War Department to purchase.

*Fresh beef.*—Advertisement was published in the principal cities of the United States and in the principal newspapers of this island calling for bids for supplying the posts in Porto Rico with fresh beef for the fiscal year ending June 30, 1901. No bids were received from parties on the island, and Swift & Co., being the lowest bidders in the United States, a contract was made with them. All posts on the island are at this date supplied with refrigerated beef from the United States, the beef for interior posts being forwarded in ice boxes three times each week; and it has been received and issued in a satisfactory condition. The refrigerated beef has been good in quality and has given general satisfaction. Refrigerators have been put up at Aguadilla (since made a subpost of Mayaguez), Cayey, and Mayaguez. Two additional ice plants have been established in San Juan since last annual report, one operated by the Medical Department, United States Army, and ice is now supplied to all posts in the department.

*Fresh vegetables.*—Fresh vegetables have been supplied during the year by contract, and the quality has been good, with the exception of those received during June, when it was impossible to provide a satisfactory quality; new potatoes not being in market, and last year's crop, while fairly good when received at San Juan, was not able to stand transportation.

After the occupation of this island by the United States the Spanish Government required the usual tariff on coffee from this island, which stopped the export to that country; and to relieve the merchants, who had accumulated large stores, the purchasing officer was directed to buy coffee and ship to the United States and Manila. The few merchants who held the supply immediately raised the price from 8 cents to 16 cents on Government bids, which were all rejected, and after accepting a few hundred thousand pounds at reasonable rates the purchase was discontinued.

## SERVICES OF THE SUBSISTENCE DEPARTMENT IN THE PHILIPPINES.

Maj. David L. Brainard, commissary of subsistence of volunteers (captain and commissary of subsistence, United States Army), as chief commissary, Department of the Pacific and Eighth Army Corps, was granted leave of absence for one month on surgeon's certificate of disability, with permission to leave the limits of command and visit Japan, per Special Orders, No. 244, Headquarters Department of the Pacific and Eighth Army Corps, September 6, 1899. Left Manila September 7, 1899. By Special Orders, No. 201, Headquarters of the Army, August 28, 1899, he was directed to be relieved from duty as chief commissary, Department of the Pacific and Eighth Army Corps, and proceed to San Francisco, Cal., and on arrival report by telegraph to the Adjutant-General of the Army for orders.

Since the last annual report of this bureau the following changes have occurred in the personnel of the subsistence department in the Philippine Islands:

Maj. Oskaloosa M. Smith, commissary of subsistence, was relieved from duty in this office on September 1, 1899, and sent to Manila, P. I., to report in person to the commanding general, Department of the Pacific and Eighth Army Corps, for duty as chief commissary of that department and corps, to relieve Maj. David L. Brainard, commissary of subsistence, United States Volunteers, per Special Orders, No. 201, Headquarters of the Army, August 28, 1899. He was retired from active service, per Special Orders, No. 37, Headquarters of the Army, February 13, 1900. He was relieved by Major Dravo, commissary of subsistence.

Maj. Edward E. Dravo, commissary of subsistence, was relieved from duty as chief commissary, Department of the Gulf, and purchasing commissary at Atlanta, Ga., September 25, 1899, and sent to San Francisco, Cal., to report to the commanding general, Department of California, not later than October 10, 1899, for temporary duty, and upon completion of same to proceed to Manila, P. I. He was appointed and announced as chief commissary, Department of the Pacific and Eighth Army Corps, per General Orders, No. 1, Headquarters Department of the Pacific and Eighth Army Corps, January 2, 1900. Duties changed to chief commissary, Division of the Philippines, April 7, 1900, by discontinuance of Department of Pacific and Eighth Army Corps and establishment of the Division of the Philippines, per General Orders, No. 1, Headquarters Division of the Philippines, April 7, 1900. By Special Orders, No. 125, Headquarters of the Army, May 28, 1900, he was ordered to be relieved from duty as chief commissary of the Division of the Philippines by Col. C. A. Woodruff, assistant commissary-general of subsistence, and directed to proceed to San Francisco, Cal., and upon arrival to report by telegraph to the Adjutant-General of the Army for instructions. Relieved from duty as chief commissary, Division of the Philippines, by Col. C. A. Woodruff, assistant commissary-general of subsistence, July 17, 1900.

Col. Charles A. Woodruff, assistant commissary-general of subsistence, was, by Special Orders, No. 125, Headquarters of the Army, May 28, 1900, relieved from duty as chief commissary, Department of the East, and purchasing commissary at New York City, and sent to Manila, P. I., for duty as chief commissary, Division of the Philippines, to relieve Maj. Edward E. Dravo, commissary of subsistence.

He was relieved from duty as chief commissary, Department of the East, and purchasing commissary, New York City, June 7, 1900. En route to Manila, P. I., on United States Army transport *Thomas*, June 16 to July 17, 1900. Arrived at Manila and reported to commanding general, Division of the Philippines, relieving Maj. E. E. Dravo, commissary of subsistence, as chief commissary of that division, July 17, 1900.

Capt. A. D. Niskern, commissary of subsistence, was relieved from duty as chief commissary, Department of the Colorado, September 25, 1899, and purchasing commissary at Denver, Colo., September 30, 1899, and sent to San Francisco, Cal., to report to the commanding general, Department of California, not later than October 10, 1899, for temporary duty. He was relieved from temporary duty and directed to proceed to Manila, P. I., for duty. Left San Francisco October 25, and arrived at Manila November 23, 1899. Assigned to duty as chief commissary, District of Mindanao and Jolo, per Special Orders, No. 324, Headquarters Department of the Pacific and Eighth Army Corps, November 25, 1899. Arrived at Zamboanga, P. I., December 9, 1899, and assumed duty as chief commissary, Military District of Mindanao and Jolo, and as depot commissary at that place, same date. Relieved from such duty per Special Orders, 57, Headquarters Division of the Philippines, June 9, 1900, and assigned to duty as chief commissary, Department of Southern Luzon, Manila, P. I.

Capt. John H. Duval, commissary of subsistence, was relieved from duty as chief commissary Department of the Missouri, and purchasing commissary at Omaha, Nebr., November 11, 1899, and directed to proceed to San Francisco, Cal., and report in person to the commanding general Department of California for temporary duty. Left San Francisco December 20, 1899; arrived at Manila January 25, 1900, and assigned to duty as chief commissary First Division, Eighth Army Corps, per Special Orders, No. 32, Headquarters Department of Pacific and Eighth Army Corps, February 1, 1900. Status changed to chief commissary Department of Southern Luzon, April 7, 1900, per General Orders, No. 1, Headquarters Division of the Philipines, April 7, 1900. Granted two months' sick leave, per Special Order 55, Headquarters Division of the Philippines, June 7, 1900. Arrived in United States July 14, 1900.

Maj. George B. Davis, commissary of subsistence of volunteers, captain and commissary of subsistence, United States Army, was relieved from duty as chief commissary Department of the Lakes, and purchasing commissary at Chicago, Ill., October 2, 1899, and ordered to proceed to San Francisco, Cal., and report in person to the commanding general Department of California not later than October 10, 1899, for temporary duty. Arrived at Manila November 23, 1899. Assigned to duty as chief commissary Second Division, Eighth Army Corps, at Bautista, P. I., November 28, 1899, per Field Orders, No. 226, Headquarters Second Division, Eighth Army Corps, 1899. Relieved from duty as chief commissary Second Division, Eighth Army Corps, and sent to Manila for duty in charge of the Manila subsistence depot, per Special Orders, No. 44, Headquarters Department of the Pacific and Eighth Army Corps, February 13, 1900. Left Bautista, P. I., February 13, 1900. Took charge of subsistence depot at Manila March 1, 1900.

Capt. Charles R. Krauthoff was appointed commissary of subsistence, with the rank of captain, February 15, 1900. Accepted commission March 11, 1900. Prior to his appointment in the regular establishment he served as commissary of subsistence of volunteers, with the rank of captain, from October 17, 1898 (date of his appointment), as chief commissary First Separate Brigade, Eighth Army Corps, at Manila, to January 13, 1899; as commissary Second Brigade, First Division, Eighth Army Corps, and in charge of issues to troops of First and Second divisions, Eighth Army Corps, from January 15, 1899, to February 28, 1900. In addition to this duty he had charge of funds and property pertaining to sales depot, Quiapo, Manila, from April 1, 1899, to September 3, 1899; in charge of depot commissary, Binondo, Manila, P. I., August 31, 1899, to February 28, 1900. Directed to be relieved from duty in Department of Pacific and Eighth Army Corps and ordered to proceed to San Francisco, and upon arrival to report by letter to the acting commissary general of subsistence for orders, per Special Orders, No. 53, Headquarters of the Army, March 5, 1900. Left Manila March 6, 1900. Reached San Francisco April 5, 1900, and assigned to duty as assistant to the purchasing commissary at that place April 28, 1900, per Special Orders, No. 92, Headquarters of the Army, April 19, 1900. He was relieved as depot commissary at Binondo, Manila, P. I., by Maj. George B. Davis, commissary of subsistence.

The duties devolving upon these officers were arduous in the extreme, and especial mention is made of Maj. D. L. Brainard and Maj. E. E. Dravo on account of the large money accountability connected with their duties as chief commissaries of the division, likewise for their supervision of the distribution of the tremendous quantities of subsistence stores required for the troops in those islands.

### SUBSISTENCE STORES AND PROPERTY SENT TO THE PHILIPPINES.

The following articles and quantities of subsistence stores and property required for on requisitions forwarded to this office by the chief commissary at Manila, P. I., and purchased in New York, Chicago, and San Francisco, were shipped by army transports and commercial vessels to the Philippine Islands from New York and San Francisco, Cal., during the period from July 1, 1899, to June 30, 1900. This does not include the stores used on the army transports.

Instructions were sent the chief commissary, Department of the Pacific and Eighth Army Corps, at Manila, on May 16, 1899, that in submitting requisitions he should take into consideration any articles needed that might be procured on the islands, and if suitable and of less or equal cost of like articles obtained and shipped from the home market, to purchase them. Also to take into consideration the perishability of many of the articles purchased by the Subsistence Department and exercise great caution, to the end that there should be no accumulation, and in case of accumulation to take the necessary steps to prevent loss to the Government by making proper disposition.

Fresh beef was directed to be further obtained from the Navy, as at that time, until the refrigerating building was in working order and other arrangements made.

### REIMBURSEMENT.

The following amounts have been reimbursed the Navy Department from appropriation "Subsistence of the Army, 1900," for fresh beef and mutton delivered from refrigerating ships at Manila, P. I.:

| | |
|---|---|
| Jan. 12, 1900, to appropriation provisions, Navy, Bureau Supplies and Accounts, 1900 | $23,308.85 |
| Jan. 12, 1900, to appropriation provisions, Navy, Bureau Supplies and Accounts, 1900 | 48,116.56 |
| Oct. 16, 1899, to appropriation provisions, Navy, Bureau Supplies and Accounts, 1900 | 23,138.44 |
| May 23, 1900, to appropriation provisions, Navy, Bureau Supplies and Accounts, 1900 | 13,876.07 |
| Aug. 17, 1900, to appropriation provisions, Navy, Bureau Supplies and Accounts, 1900 | 95,560.28 |
| | 204,000.20 |

### FRESH MEAT AND VEGETABLES.

Extracts from correspondence received from Lieut. Col. D. L. Brainard, chief commissary of subsistence, United States Volunteers, chief commissary Department of the Pacific and Eighth Army Corps, Manila, P. I.; also from Capt. Wm. H. Anderson, commissary of subsistence, United States Volunteers, issuing officer to all troops in the Philippine Islands:

[From Lieutenant-Colonel Brainard, October 28, 1898.]

Fresh beef, supplied from Australia, is of excellent quality, and as it comes in a refrigerated ship, keeps indefinitely. In future one-sixth of the cargo should be mutton. This has the same keeping qualities as beef, is cheaper, and makes a welcome change in the diet of the soldier. Native beef is high in price, costing about 12 cents per pound, is of inferior quality as compared to the Australian meat, and the supply is inadequate to the demands of this army.

[From Captain Anderson, November 5, 1898.]

In view of the fact that we have remained in garrison life in Manila for nearly three months, it is natural that a better idea can be formed as to the workings of the present ration than set forth in my letter of September 1. Active campaigning has ceased, the restless volunteer remains to be considered, and the trying climate is always before us. The experiences of the Commissary Department have been unusual, and I think, from the satisfaction expressed in certain quarters, that the work has not been without some reward. This office has done the entire rationing of all the troops at Manila and vicinity since the occupation. Nearly 14,000 men, every one having a different taste, have been rationed, and the contact of this office with the twenty-seven different organizations has given much fruit for reflection.

1. *Meat component.*—In regard to the meat component which from our experience would give the best satisfaction, we would give Australian fresh beef three-tenths, Australian fresh mutton three-tenths, bacon from the United States two-tenths, canned American salmon one-tenth, and either canned American roast beef or canned corn beef one-tenth. The Australian market will always furnish the best article of fresh meats, and the storage in refrigerator ships has so far been successful. * * * In the event these islands are retained, the Government would find the permanent establishment of a cold storage in the city of great advantage. This is something that would not only do away with the detention of an expensive refrigerator ship, but would also give means for the proper storage of many other subsistence stores. * * * It might be added that cattle can be purchased on the islands, but this would not be of as high a grade as the Australian beef. There are also sanitary reasons which would make the use of native beef objectionable.

[From Colonel Brainard, November 12, 1898].

The meat furnished from the storeship *The Duke of Sutherland* is excellent in every respect. It is suggested that one-sixth mutton be supplied with the next invoice from Australia. Mutton is cheaper than beef and would make a welcome change in the diet of the men.

[From Captain Anderson, December 26, 1898.]

It is a great mistake that the present cold-storage ship is not supplied with one-half fresh mutton and one-half fresh beef, or four-sevenths beef and three-seventh mutton. The mutton from Australia is of such an excellent quality, and after being frozen is devoid of strong taste characteristic with mutton. It would be a much appreciated change, and the Government would profit, as mutton is cheaper. * * *

Fresh potatoes and fresh onions as now delivered by Wolfe Brothers, San Francisco, are the finest ever seen in the Philippines. Of the three lots already delivered, amounting to about 200 tons, there has been one crate of bad potatoes, and these were unfortunate in coming in contact with salt water during the voyage. Of course this is not the most trying season of the year, and final judgment should be suspended until the close of a year which will include the hot and wet season. It can be safely said that the United States can not only save money through less wastage, but can also furnish its men with a superior vegetable by the present arrangement. The potatoes and onions are en route about forty days, and during that time there is a shrinkage of about 5 per cent in potatoes and 13 per cent in onions. During the severe season this shrinkage would be slightly increased. The contractors have observed several essential points in their contracts. Careful picking and assorting, good form of crate—octagonal strong crate, and not so large as to allow weight to be felt anywhere through the crates. * * *

When a cold-storage plant is built on the island, the navy boat could be used to transport meat from Australia to Manila, and then discharge her cargo into cold-storage plant and save heavy expenses of holding a storage ship. This office has issued as high as 180,000 rations to the Eighth Army Corps in one day, and the central distributing has proved entirely satisfactory. Troops have never been without rations since the establishment of Camp Dewey.

[From Colonel Brainard, December 27, 1898.]

Relative to a system of cold storage for the preservation of fresh beef for use of the military forces of this command, I have the honor to submit the following remarks:

The method of supplying beef from Australia by refrigerated ship and of retaining the ship in the harbor as a cold-storage magazine, from which stores are drawn as needed, has the objection of being exceedingly expensive in that demurrage must be paid from the time the vessel drops anchor. We are paying at the present time, for this service, $400 per day, which includes all expense connected with the preservation of the meat. Another objection to such a system in this particular place is that during the season of typhoons a whole week of continuous bad weather may prevent launches from going out to the meat ship to secure the supply required for the troops.

In explanation, I will say that no vessels, except those of light draft, from 9 to 11 feet, are unloaded at the wharves of the Pasig River. All others, including our meat ship, are, owing to the shallow water near the mouth of the Pasig, compelled to anchor out in the bay, a mile or more from the city, and are unloaded by means of lighters. During the typhoons the bay is very rough and no lighter will venture out to the ships. While this plan appears cumbersome, it is the only one possible under the present conditions.

For the above reasons the establishment of a cold-storage plant, as suggested in your letter of November 10, is the only solution of the problem of furnishing an adequate and always available supply of fresh beef to the troops serving in Manila.

The plant should have a capacity of about 1,000 tons, equivalent to five months' supply for 20,000 men, and as a measure of economy should be so divided into compartments that those first exhausted of their contents could be cut off from those still occupied, thus reducing to its lowest limit the expenditure of energy required to maintain the plant. The temperature for the beef compartments should be kept down from 15° to 25° F. There should also be a chill room with capacity of, say, 400 tons, having a temperature ranging from 32° to 45°, for the storage and preservation of vegetables, cheese, bacon, ham, and other perishable foods. It is believed that the saving in the vegetable component of the ration alone would pay for maintaining the plant. The entire system, except stone, brick, lime, etc., would have to be brought from San Francisco or other points.

A large vacant space in Binondo, reserved for governmental purposes and located near our main subsistence storehouse, is admirably adapted as a site for the building required. This space for such purpose has an additional value in that it is near the river, where the meat could be unloaded from the lighters directly into the plant.

Another valuable feature in connection with the cold-storage system would be an ice machine from which could be obtained, when required, sufficient ice for the preservation of stores on transports not provided with refrigerated compartments returning hence to the United States, or going to the garrisons which will later be established in some of the other islands. There is only one ice plant in Manila and it does not furnish one-half the ice that could be disposed of here, and a ton of ice could not be purchased from this plant for love or coin.

An ice plant connected with the refrigerated system would place the Subsistence Department on an independent footing as regards other sources of supply, and the saving that would result would be a considerable item to the Government. * * *

In view of the probable occupancy by our forces of several islands comprising the group, it may later become a necessity to establish small cold-storage plants at such important points as may be garrisoned. A refrigerated vessel could then bring a cargo of frozen beef from Australia (a voyage of only eleven or twelve days) and upon arrival here visit the various garrisons and discharge directly into the plants. The vessel could then return leisurely to Australia for another cargo. For the present, however, it is recommended that the Manila plant only be established, as it is probable that small garrisons would have no difficulty in being supplied with fresh meat from the herds of native cattle in the interior of these islands.

The Army should own and control the refrigerated vessel used for the purpose of renewing the beef supplies. The Navy has a vessel of that kind, the *Culgoa*, now in this harbor, from which Admiral Dewey's fleet is supplied.

[From Colonel Brainard, January 12, 1899.]

The vegetables furnished from San Francisco are excellent in every respect. Being the very best in the market, carefully crated and stowed, the various invoices have arrived in perfect condition and are keeping well. The first lot reached here December 6, and to this date only one crate of potatoes has been returned to the issuing commissary in bad condition, and it was stowed in such a position as to be brought in contact with sea water at some stage of the voyage. I have already renewed the contract for these potatoes, thus extending it to June 30. There is no prospect at present of obtaining the native vegetables of this country in sufficient quantity to supply the command. * * *

The order directing me to pay the demurrage on our store ship, the *Duke of Sutherland*, was revoked at my request, a week or so after it was issued, and the chief quartermaster was directed to make all future payments and to refund to the Subsistence Department the amount that had been paid under the original order.

I wrote you fully last week relative to the refrigerating plant which you contemplate having erected at this place, and made recommendation as to storage capacity, temperature, etc., deemed necessary for preserving in a satisfactory condition such supplies as are kept in stock from time to time. Further investigation of this subject has not caused me to alter any of the recommendations made except as to the chill room for perishable articles, which should have a capacity of 500 tons instead of 400 tons.

[From Major Brainard, commissary of subsistence, Volunteers, May 6, 1899.]

I am led to believe that beef on the hoof can never be handled with satisfaction in this climate, and especially when troops have been accustomed to the use of the frozen article.

[From Major Brainard, commissary of subsistence, Volunteers, to adjutant-general, Department of the Pacific, August 9, 1899.]

The last issue of frozen Australia beef was made July 3. This consumed all the beef on hand except a few tons which were held for use of the hospitals should circumstances demand it. Having been informed by the naval officials that their vessel, the *Glacier*, could not reach here until July 16, arrangements were made for a refrigerated steamer to supply the army in the interim, but an unfortunate breakdown prevented its arrival as expected. In this emergency arrangements were made for a supply of live cattle, and they were slaughtered here and immediately transferred to the *Duke of Westminster*, where they were placed in the cooling rooms and frozen. This meat was issued after it had been thoroughly frozen. It was of good quality and every care was exercised that none but that of prime quality be issued. However, it was not looked upon with favor by the troops, who were accustomed to the frozen Australian product, with which no other meat compares, and many of the organizations refused this beef, and to prevent loss it was immediately sold at auction. No further issues of it were attempted, and the command was necessarily without fresh beef from the 7th to the 17th, the date when the first issue was made from the naval vessel *Glacier*. This vessel brought a cargo of frozen beef from New York. This American beef is of good quality, but it is not equal to the Australian beef. In America the second quality is used, while in Australia only that of first quality is prepared for the export trade. As the Navy now has three cold-storage vessels in these waters, it is thought that the supply of frozen beef will not again become exhausted. Considerable difficulty was also had in procuring an adequate supply of beef for the command at Iloilo, though every effort was made to keep them supplied, and every available opportunity to purchase and ship was embraced. This matter will be permanently and satisfactorily adjusted upon the arrival of a cold-storage vessel—the *Bungaree*—expected to reach Iloilo about September 15. The other commands in the Viscayan military district purchase their own cattle, slaughtering them as required, and no complaints are received.

Maj. Gen. E. S. Otis, U. S. A., commanding general, Division of the Philippines, in his annual report covering the period from September 1, 1899, to May 5, 1900, states as follows:

> In the dispersion of our army of 60,000 men throughout the Philippines the labor attending dispersion and supply became very great. * * * Notwithstanding the multitude of demands presented, there are no instances in which troops, however circumstanced, have not received abundant food supplies, except when, in rapid pursuit of a fleeing enemy, the wheeled transportation furnished them was temporarily abandoned. * * * This fact in itself shows the competency of officers connected with the departments of supply, and no further proof is required to establish their efficiency and unremitting attention to duty. The ability, marked efficiency, and zeal of officers of this army may be judged by the vast results accomplished.

### FROZEN FRESH BEEF AND MUTTON.

The following elaborate and interesting report prepared by C. R. Krauthoff, captain, assistant commissary of subsistence, United States Volunteers, dated Manila, P. I., January 10, 1900, on the method of supplying United States troops in Manila and vicinity with fresh beef and mutton, is herewith published:

*Source of supply.*—Fresh beef and mutton for use of the troops has been purchased under various conditions. The first cargo was purchased by the American consul in Australia, and was sent to this port some time about the latter part of August, 1898, on the cold-storage ship *Duke of Sutherland*. This cargo lasted until about April, 1899. After this cargo was exhausted the United States Navy supply ship *Culgoa* furnished the army with frozen beef and mutton for a short period, when another cargo was purchased by the army and brought to this port on the *Duke of Westminster*. After this cargo was used up, the army again received its supply from the United States Navy supply ship *Glacier*, which sailed from New York and arrived here about July 16, 1899. The *Glacier* had a cargo of fresh beef and mutton which was furnished by the firm of Swartzschild & Sulzberger, New York and Kansas City. After this supply was exhausted the Australian ship *Maori King* came into the harbor with a cargo of frozen beef and mutton. This boat was delayed. Her owners' intentions were that she should arrive before the *Duke of Westminster's* cargo was exhausted and before the arrival of the *Glacier*, but on account of delays and the grounding of the *Maori King* on Thursday Island she came too late, and for a short period the supply was very limited. After consultation with Admiral Watson as to the supply on hand, General Otis approved a contract by which the cargo of the *Maori King* was purchased. This cargo consisted of 750 tons and was purchased at 7 cents per pound, with no demurrage charges until after December 3. This cargo was not exhausted by that date, and Admiral Watson permitted the remainder of the cargo to be transferred to the United States Navy supply ship *Culgoa*. The cargo transferred to the *Culgoa* has been exhausted and the army is again receiving its supply from the United States Navy supply ship *Glacier*.

*Method of storing on ships.*—The quarters are packed in layers in the hold of the vessel, which is divided in a number of cold-storage chambers. The temperature of these chambers is kept below freezing, so that when the meat is taken out it is hard frozen. The manner of packing the quarters permits a vessel to carry a large supply, depending upon the size of the ship, the average being about 1,500 tons, full capacity.

*Method of taking fresh meat from the ships for issue.*—Organizations receive instructions to send their estimates for the quantity of fresh meat before 12 o'clock preceding the morning of issue—this to prevent taking too much meat off the ship. The estimates and the amount required for sale are consolidated and the quantity is drawn by the sergeant in charge of fresh-meat issues. The meat is taken off the ship in the afternoon and stored in a lorcha, a large closed barge similar to a canal boat. The meat is closely packed, then covered with several paulins, and the lorcha closed up. This lorcha and a splendid launch is furnished by the Quartermaster's Department. The lorcha is towed from the ship to the storehouses on the Pasig River, and the issues are made from the lorcha—this to prevent rehandling.

*Method of shipping fresh beef, etc.*—Troops stationed in the city and vicinity draw their fresh beef direct from the depot, and transport it to their barracks or camps by wagons, one-horse carts, bull carts, etc. The issues commence at 6 o'clock in the morning, and they get their supply before the sun is too warm. Troops stationed on the Pasig River and Laguna de Bay are supplied by shipping on a launch which leaves Manila every other day. The quarters are packed on the launch, each marked for the organization intended, and packed so that the first off is put on last. The whole is covered by a paulin, and the beef reaches its destination hard frozen and in good order. In this manner troops at San Pedro Macati, Pasig, Calamba, and Los Banos receive their supply. Another launch makes a daily trip to Bacoor and Paranaque on the south lines. The fresh meat is sent in the same manner as up the Pasig, etc. At Bacoor transportation meets the boat and takes the fresh meat for the troops stationed at Imus and on the Zapote River. The troops and hospital at Corregidor Island also receive their fresh meat by launch, which makes daily trips.

The greatest means of supplying troops is the Manila and Dagupan railroad operated by the Quartermaster's Department. There is a train leaving Manila every morning at 9 o'clock, arriving at Dagupan about 6 p. m. There is a regiment stationed at points along and near the railroad from Calumpit to Manila. This regiment draws its fresh meat and cuts it up for different detachments and companies and distributes it from a car as the train stops at the different towns. In addition, this depot has two cars which go up every morning. One is for fresh meat and one for fresh bread. These cars are in charge of one man, detailed on special duty in the Subsistence Department, who attends to the distribution of supplies along the railroad and for points where supplies are reshipped. These cars carry supplies for troops at Malolos, and transportation meets the train and receives the fresh beef or mutton for the troops stationed at Quingua, Baliuag, etc., Baliuag being about 14 miles from Malolos. At Calumpit fresh meat is reshipped by launch to Macabebe, San Luis, Candaba, and Arayat. At San Fernando there is a depot, and a shipment is made to the commissary at that point, who issues fresh meat to all organizations in the vicinity. A similar depot is at Angeles, where shipments are made to the commissary for distribution to troops stationed there and in the vicinity. Fresh beef has also been shipped to Orani by launch, and arrived there in good shape. An experiment was made by sending fresh beef to San Mateo, and the commissary reports that it arrived in good shape and would have kept fifteen hours longer. On last Monday a shipment of fresh beef was made to Bocave, on the railroad, and reshipped to Norzagaray by wagon transportation. Major Short reports that it arrived in a frozen condition. Troops at Dagupan and vicinity, and troops along the railroad and points off the road, are supplied with fresh beef from a refrigerator car which is sent from this depot. This car was built by the Quartermaster's Department upon the request of the depot commissary. It will hold about 10 tons fresh beef and 6,000 pounds ice. It has two compartments, and the meat keeps in excellent condition until exhausted. This car is sent back on the day which the last beef is taken out, and on that night is restocked with beef and ice and sent up on the 9 a. m. train, so that troops are only without fresh beef one issue. Another car will be built, and then even greater facility will be at hand to expedite the supply. Captain Logan reports the car a great success. In all of the foregoing shipments they are practically made to points of distribution, and the meat is sent from these points still farther out to companies stationed at villages and at outposts, etc.

*Manner of packing the fresh beef and mutton for shipment.*—In packing frozen fresh meat, the object is to exclude the air, and the closer packed the better it keeps. When fresh meat is sent to organizations serving in the city no protection is necessary, as the beef is too hard frozen when issued for early consumption. When sent out a distance from the depot protection is necessary from the sun. The quarters are closely packed on wagons or carts and covered with canvas. When carried on pack mules the quarters are cut and the pieces wrapped in small pieces of canvas. When sent out on cars for local delivery the quarters are closely packed in an ordinary box car and the doors kept closed, except when meat is taken out. When stored in the

[illegible] OF WAR

rigerator car the quarters are closely packed and piled so that all space is filled. is a peculiar fact, but the fresh meat helps to preserve the ice, for when the ice is st put in the car it melts very rapidly. As soon as the car is filled with frozen eat the ice melts very slowly. Six thousand pounds of ice preserves 20,000 pounds f fresh meat for five or six days.

*Keeping qualities.*—Under favorable conditions and if it is properly cared for, meat will keep in good condition for seventy-two hours after being taken from the ship. It will keep under unfavorable conditions forty-eight hours. During the period from February 1, 1899, to December 31, 1899, the following issues, sales, and transfers have been made: Fresh beef, 5,234,171 pounds; fresh mutton, 510,013 pounds. In handling this quantity there was lost to the United States on account of spoiling: Fresh beef, 3,082 pounds; fresh mutton, 2,552 pounds.

The issues, etc., were made during an active campaign and the losses were caused by shipping fresh meat to organizations which had suddenly changed stations, or transportation breaking down. As to the distance that meat can be transported, depends entirely upon the time required. Fresh meat is shipped on the railroad 147 miles. It is also shipped by wagon transportation from 15 to 20 miles from the railroad and by launch 35 miles from the depot. Hind quarters keep better than fores and fresh beef keeps better than mutton. This on account of the bulk of meat. The lighter the weights the quicker it thaws.

*Quality.*—The quality of the fresh beef and mutton may be classed as export beef or mutton. It is first class in quality, inspected by experts and slaughtered and dressed in the very best manner. The meat is tender and very palatable. The main trouble in cooking the fresh meat is that inexperienced persons attempt to cook the meat while still frozen, or while the interior of the meat is very cold. From experiments made it is best when practicable, to let the quarters hang in a moderately cool room about thirty-six hours before using.

The accompanying map shows points to which shipments were made.

### COLD STORAGE AT MANILA, CEBU, ILOILO, AND JOLO.

On October 10, 1899, this bureau communicated with the Quartermaster's Department to know what steps, if any, had been taken to provide means to protect the subsistence stores from depreciation and great loss at Iloilo, Jolo, and Cebu, P. I., the climatic conditions at those places being considered such as to necessitate the erection of refrigerating plants. Not receiving any information upon the subject, this office, on December 16, 1899, asked the chief commissary, Department of the Pacific and Eighth Army Corps, at Manila, to report what steps had been taken to provide cold-storage facilities required by the Subsistence Department in Manila, and in Iloilo, Jolo, and Cebu, and if the cold storage at those places had been contracted for when the plants were likely to be finished. To which Maj. Edward E. Dravo, commissary of subsistence, United States Army, chief commissary, Division of the Philippines, on July 19, 1900, reported as follows:

> The Government plant at Manila will not be finished for some time, probably not for eighteen months or even longer, as the foundation is not yet completed. A small plant sufficient for a number of articles of the most perishable varieties of stores has been purchased here of a Mr. Evans for our use, it, after a month's trial, having been found very satisfactory in every way. It has a cold-storage room 60 by 30 by 10 feet.

### FROZEN MEAT FOR USE IN AN ARMY.

The foregoing correspondence shows the success achieved by the use of frozen meats for the troops in the Philippines, and it may be of interest to go into the subject and indicate the origin of the application of the method of preservation by cold to the meat supply of an army.

In 1874, M. Tellier, civil engineer at Auteuil, France, and M. Bouley, inspector-general of the veterinary schools in France, called attention to the commercial methods of shipping meat preserved by cold dry air, and stated that such meat could be kept in good condition for about six weeks. In 1888, Dussutour, referring to the results of the experiments of Tellier and Bouley, pointed out the advantages which would result by the application of the system of preserving meat by cold to the supply of an army. Since 1888 considerable attention has been given to this question in France, and the following instructions have been issued by the French minister of war:

> There are three methods of preserving meat by means of cold—the method for the short, medium, and long period.
>
> I. *Short periods.*—The method termed the short period enables the meat to be kept about twenty days. The meat to be kept for a short period is subjected, in a dry place, to a low temperature which varies from 37.4° F. to 26.6° F., depending upon whether the duration of the conservation is to be for several days or for two or three weeks.
>
> *II. The medium period, or slow freezing.*—Meat freezes about 24.8° F. If the temperature of the surrounding air falls to that point, the meat is frozen, at least in the superficial parts, but not deeply at first, and its length of conservation, considerably increased, may extend to ninety days. The superficial freezing extends progressively to the inner layers of the meat and finally the central portions are affected. But at this temperature (24.8° F.) thorough freezing is only slowly accomplished, from which fact the name of this method is derived. Thus treated, meat retains all the qualities of fresh meat for three months.
>
> *III. Long period.*—When it is necessary to keep the meat for more than three months, the freezing must extend, from the beginning of the treatment, not only to the outer layers but to the inner portions of the meat, and it must be frozen solidly. Experiments show that to attain this result with certainty it is absolutely necessary to lower the temperature of the central portion of the meat to 14° F., which necessitates subjecting the meat to a temperature from −4° F. to −13° F., because of the resistance the meat offers to the penetration of cold.
>
> Meat thus solidly frozen may be kept for six months or, so to speak, indefinitely. It regains, when thawed out, the appearance, taste, and all the qualities of fresh meat.
>
> Once solidly frozen, in order to keep the meat it is only necessary to treat it in the manner described for the second period, that is, to put it in a dry place, the temperature of which is maintained at 24.8° F.

Major Baldwin, purchasing commissary, San Francisco, Cal., reports:

> Every Government-owned transport is now supplied with frozen beef. When a Government-owned boat starts out with an unusually large number of troops the first six days' supply is sometimes placed on board chilled in a separate room from the frozen. The refrigerating plants here place the beef in the freezing room at about 15° F., lower the temperature to 6° F., and no meat is accepted that has not been in the room six days. The meat is then examined by sawing through the thickest parts. If frozen satisfactorily it is accepted.

From the foregoing report of Major Baldwin, it is seen that the meat is frozen by the second method described above.

From the correspondence above, it is seen that the frozen meat used in Manila is procured in Australia. In May, 1898, the State Department issued a consular report on the "Frozen-Meat Trade of Australasia and the Argentine," in which the following occurs:

> *Preparation for export.*—After separating the heart, kidneys, tongue, etc., leaving only the bare carcass, the meat is subjected to the freezing process, 15° to 20° F. below zero, about 50° of freezing being applied. When thoroughly hard, the carcass is sewn up in thin cotton cloth and transferred to the refrigerating chambers in steamship.

The statement that the meat is subjected to the freezing process, 15° to 20° F. below zero, makes it manifest that the meat is frozen by the third method above described.

### HOT ROAST BEEF ON THE FIRING LINE IN THE PHILIPPINES.

The following complimentary allusion to the Subsistence Department by Lieut. Terruccio Vitale, of the Italian army, military attaché to the national embassy at Washington during the Spanish war, and who went to Manila with the United States troops, is taken from an article which appeared in the Journal of the Royal United Service Institution (Vol. XLIV, July 16, 1900, No. 269, pp. 828–29):

> What pleased me probably more than anything else was the sight of serving hot roast beef to the soldiers on the firing line out in the Philippine Islands, miles and miles away from the military depots. The Commissary Department of your war office has been criticised very harshly, but when you consider what it means to feed soldiers on the firing line with hot roast beef you will agree with me that it is a feat which few armies can boast of. All the time I have spent in the Philippine Islands I have lived and messed with the officers, have watched closely how the troops fared, and I must say that the Commissary Department did splendid work.

### THE RATION IN THE PHILIPPINES—UNITED STATES TROOPS.

[Extract from report of Maj. W. D. Beach, inspector-general, United States Volunteers, made February 2, 1900, in connection with his work as inspector-general of the First Division under General Lawton.]

The ration is sufficient and excellent, but it was impossible under the conditions to which the troops were subjected in this campaign to keep those at the extreme front fully supplied with even bacon, coffee, sugar, and hard bread. This, however, was no fault of the Subsistence Department.

The emergency ration was used during six consecutive days by myself and my detachment, but fortunately we had a little coffee, bacon, and sugar with which to eke out, so that it did not grow very distasteful. As a rule the men dislike it, but for the purpose intended it is excellent. About 10 per cent of what we carried was spoiled by reason of the cans being poorly soldered, although the fact of its being bad was not discovered until the cans were opened. The tin cases in which the hard bread was packed proved of the greatest possible advantage.

[Extract from report of First Lieut. Louis H. Bash, Thirteenth Infantry, commanding provisional brigade, operations in province of Cavite, Luzon, P. I., October 8 to 14, 1899.]

Throughout the expedition all rations received and issued by me were of excellent quality. * * * The country through which we passed was very rich—rice, sugar, salt, pigs, and chickens being found in profusion. In my opinion, had plenty of hard bread, bacon, sugar, and coffee been issued to the troops, they could have lived upon the country and fared well. In a future expedition of this sort, where transportation is limited, this is the course I should recommend, in addition, giving the commissary authority to purchase such supplies as may be needful.

### THE RATION FOR INDIAN POLICE, PRISONERS OF WAR, STRETCHER BEARERS, AND NATIVE AND CHINESE LINEMEN EMPLOYED FOR SIGNAL WORK.

The following is the ration for one day for Indian police, prisoners of war, stretcher bearers, and native and Chinese linemen employed on signal work, as approved by the Major-General commanding the Department of the Pacific and Eighth Army Corps:

| | | |
|---|---|---|
| Rice | pounds | 2 |
| Meat, fresh | do | $\frac{3}{4}$ |
| Or bacon or pork | do | $\frac{3}{4}$ |
| Or canned or salt beef | do | $\frac{3}{4}$ |
| Or salmon | do | $\frac{3}{4}$ |
| Coffee | do | $\frac{1}{40}$ |
| Sugar | do | $\frac{1}{25}$ |
| Salt | do | $\frac{1}{30}$ |
| Soap | ounce | $\frac{8}{25}$ |
| Vinegar | gill | $\frac{2}{25}$ |

The meat component is issued in the following proportions when practicable: Fresh meat, three days in ten; bacon, one day in ten; salmon, one day in ten, and roast beef, canned, five days in ten; or the last two may be issued as follows: Salmon, three days, and roast beef, canned, three days in ten.

## THE SPANISH RATION FOR NATIVE SOLDIERS AND THE RATION ISSUED TO SPANISH PRISONERS OF WAR.

On January 20, 1899, Col. D. L. Brainard, chief commissary, Department of the Pacific and Eighth Army Corps, at Manila, P. I., reported as follows:

I have the honor to inclose herewith a list of the rations issued by the subsistence department of the Spanish Army in these islands to its native troops. As will be seen, the rations are in three groups, which vary only in their meat component, each group possessing all the nutritive materials necessary to perfect health for the native soldier, who, from childhood, has subsisted chiefly on a rice diet supplemented by fresh or dried fish.

The mongos is a small native pea, and is made a part of each group of the authorized ration. It is always obtainable in the Philippines under normal conditions. In groups two and three vinegar is added for use in connection with the jerked beef and dried fish. The rice forming a part of the above ration is always the native article and is of second quality.

I was informed by the chief commissary of the Spanish forces here that the groups were interchangeable, and had been devised on the assumption that the component parts of some one particular group would always be obtainable in or about Manila.

I send you also a list of the ration approved by the commanding general, Department of the Pacific and Eighth Army Corps, for issue to such of the Spanish prisoners of war as belonged to the native forces in this city. This ration is practically the same in quantity as that adopted by the Spanish authorities for the Filipino soldier, but it is generally much better in quality. The Filipino soldiers have grown fat, sleek, and healthy on this ration. They have made considerable in the way of savings, and have expressed themselves many times as being much better fed under our system than under the Spanish régime, which prevailed prior to August 13 last.

Should the United States retain these islands and authorize the establishment of a native army, it is recommended that this ration, or a modification of it, be adopted for use. It is adapted to a tropical climate; it has given satisfaction to the soldier, and its cost is less than 14 cents per man per day, and this at a time when prices are unusually high, owing to the fact that the cheaper native products from the interior of the island are cut off by a not too obliging insurgent army.

The list marked "European" is the daily ration issued to the Spanish prisoners of war. The soldiers have expressed themselves as well satisfied with the variety, quality, and quantity of this ration, and have made large savings.

*Ration authorized by Spanish army for native soldiers in Philippine Islands.*

| No. 1. | | | No. 2. | | | No. 3. | | |
|---|---|---|---|---|---|---|---|---|
| Rice | liter | 0.95 | Rice | liter | 0.95 | Rice | liter | 0.95 |
| Meat, fresh | kilogram | .350 | Jerked beef | kilogram | .100 | Fish, dry or fresh | kilogram | .150 |
| Salt | do | .008 | Vinegar | liter | .01 | Vinegar | liter | .01 |
| Lard | do | .020 | Lard | kilogram | .020 | Lard | kilogram | .020 |
| Mongos (pea) | liter | .140 | Mongos | liter | .140 | Mongos | liter | .140 |
| Coffee | kilogram | .010 | Coffee | kilogram | .010 | Coffee | kilogram | .010 |
| Sugar | do | .020 | Sugar | do | .020 | Sugar | do | .020 |

*Daily ration issued by the United States Subsistence Department to the Spanish prisoners of war.*

| To native soldiers (Filipinos). | | | To Spanish soldiers (European). | | |
|---|---|---|---|---|---|
| Rice | pounds | 2 | Bread or flour | pound | 1 |
| Meat, fresh | do | 3/4 | Meat, fresh | do | 1 |
| or salmon | do | 3/4 | or salmon | do | 1 |
| or bacon or pork | do | 3/4 | or bacon or pork | do | 3/4 |
| or canned or salt beef | do | 3/4 | or canned or salt beef | do | 3/4 |
| Salt | do | 1/50 | Salt | do | 1/50 |
| Lard | do | 1/25 | Peas or beans | do | 1/25 |
| Mongos | do | 1/4 | Coffee | do | 1/20 |
| Coffee | do | 1/20 | Sugar | do | 1/25 |
| Sugar | do | 1/25 | Wine | pint | 1 |
| Vinegar (per 100 rations) | gallons | 1/4 | | | |

Capt. S. B. Bootes, assistant commissary of subsistence, who, on August 23, 1898, was placed in charge of subsistence of all Spanish prisoners of war, and continued from time to time on that duty until July 20, 1899, says, in a report rendered by him to the Chief Commissary Department of the Pacific and Eighth Army Corps, dated August 10, 1899:

> As regards the work in connection with the subsistence of Spanish prisoners of war, I have the honor to submit the following:
>
> When I took charge of the work there were 13,382 Spanish soldiers reported for rations. Of these 8,601 were European and 4,781 natives. Twelve thousand and eighty-nine were for duty, and about 10 per cent (1,293) were in the hospital.
>
> The rations were from lists made up by me and approved by the commanding general, and were as nearly like the rations issued by the Spanish as possible. They were of two classes—one for Europeans and one for natives. [See lists in Colonel Brainard's report of January 20, 1899, above.] The components were purchased in open market from the lowest bidder, preference being given to the Subsistence Department and American merchants, quality and price being equal. It was hard to figure the exact cost per ration on account of the stores turned over by the Spaniards being used as long as possible before any purchases of these components were made. But by figuring the amount of stores captured at the average prices per ration of both European and native rations, the cost was 29 and a fraction cents, Mexican silver, or about 15 cents gold per man per day.
>
> The average does not include the cost of those in hospital to whom was paid the sum of 75 cents Mexican silver, or 37½ cents gold, per man per day; and in addition to the above I paid for the washing of all hospital linen, furnished necessary medicine, oil for lighting, and fuel for cooking. (All the above in lieu of rations in kind.)
>
> The Spanish officers, both naval and military, declined to receive rations, though I informed them they were entitled to them, and could draw them either in kind or commutation. Such notification and declination are on file as matter of record.

### CHINA RELIEF EXPEDITION.

Early in July, 1900, it became necessary to send an expedition to China to relieve the members of the United States legation at Pekin. Two regiments of infantry and a battery of light artillery were sent from the Division of the Philippines. These troops were amply provided with subsistence stores, including articles of the ration and stores for sales, by the chief commissary at Manila. Other troops were ordered to China from garrisons in this country, and rations and stores for sales were liberally provided for them. Preparations were made to ship the necessary stores to China to supply the troops there during the winter. The fall of Pekin and the relief of the legations rendered possible the withdrawal of all troops there except a sufficient number retained as legation guard.

The supply of the troops in China was largely provided through the depot in Manila and from the depot at San Francisco, under the supervision of Colonel Woodruff, the chief commissary of the Division of the Philippines, and Major Baldwin, depot commissary at San Francisco, to whom great credit is due for the successful work accomplished. The immediate work with the troops in the field in China was performed by Major Gallagher, the chief commissary of the expedition, and Captain Ramsey, of the Ninth Infantry, who are entitled to great praise for the successful work accomplished by them. The official and private reports from China show that this Department successfully met every requirement there, and many complimentary remarks have been made regarding the amount and quality of the stores shipped. The work connected with the China relief expedition falls properly in the current fiscal year and will be treated of fully in my next annual report.

### SERVICES OF THE SUBSISTENCE DEPARTMENT IN ALASKA.

By General Orders, No. 8, Headquarters of the Army, January 19, 1900, that portion of the Department of the Columbia embracing the territorial limits of Alaska was created a military department known as the Department of Alaska, and embraced the following posts: Circle, Cape Nome (now Fort Davis), Fort Egbert at Eagle, Fort Gibbon, Tanana, Valdez, Rampart, Skagway, and Fort St. Michael.

All of these posts have been well provided with subsistence supplies from Vancouver Barracks, Wash., by Maj. Jas. N. Allison, commissary of subsistence, chief commissary, Department of the Columbia. In order that this office might be fully informed concerning the supply of the Department of Alaska, Maj. A. L. Smith, commissary of subsistence, United States Army, an assistant in this office, was, by Special Order 112, Headquarters of the Army, May 12, 1900, sent to Seattle, Wash., for the purpose of obtaining the necessary detailed information.

#### THE RATION IN ALASKA.

On the 25th of March, 1900, I recommended that the allowance of certain articles of the ration for troops serving in the Department of Alaska be increased. This was approved by the Secretary of War and appeared in General Orders, No. 46, Headquarters of the Army, April 7, 1900, as follows:

WAR DEPARTMENT, *Washington, April 6, 1900.*

Under the authority vested in him by section 1146, Revised Statutes, the President hereby increases the allowance of the following component parts of the ration for the troops serving in the Department of Alaska, such increase being considered necessary on account of the severity of the climate in that Department, viz:

Bacon, issue—1 pound per ration, instead of three-fourths pound now allowed.
Fresh vegetables—1½ pounds per ration, instead of 1 pound now allowed.
Sugar, issue—20 pounds per 100 rations, instead of 15 pounds now allowed.

ELIHU ROOT, *Secretary of War.*

On September 24, 1900, the Acting Secretary of War approved the increase of the ration of desiccated vegetables for troops serving in Alaska from 2.4 to 3.6 ounces per ration.

#### ISSUE OF RATIONS TO ARMY OFFICERS IN ALASKA.

On April 11, 1900, this office recommended to the Secretary of War that on account of the excessive cost of living necessary legislation be obtained authorizing the issue, free of cost, of one ration daily to any officer of the Army while serving in Alaska or outside of the limits of the United States. The Acting Secretary of War, on May 1, 1900, sent the following communication relating to the cost of living in Alaska to the Speaker of the House of Representatives, viz:

WAR DEPARTMENT, *Washington, May 1, 1900.*

SIR: The Acting Commissary-General of Subsistence, in a letter of 5th ultimo, calls attention to the fact that Maj. James N. Allison, commissary of subsistence, chief commissary Department of the Columbia, and purchasing commissary at Vancouver Barracks, Wash., reports that in all probability the contract price for beef for troops in the Department of Alaska will be very high, probably as much as 50 cents per pound, and that if officers are compelled to pay such excessive prices for meat the cost of living in Alaska will be very high.

In view of the fact that the law does not permit the issue of rations to officers, and provides that sales of subsistence stores shall be made to them at cost price, the Acting Commissary-General recommends that legislation be obtained authorizing the issue, free of cost, "of one ration daily to every officer of the Army while serving in Alaska."

It is expected that about 45 officers will be stationed in the Department of Alaska and 16,425 rations will therefore be required yearly. As the ration issued to troops in the Department of Alaska will cost approximately about 48.7 cents per diem, the cost of issuing rations to officers in that department each year (at the estimated number of 16,425 rations) will be $7,998.98.

Very respectfully,
G. D. MEIKLEJOHN,
*Acting Secretary of War.*

This communication was printed as Doc. No. 651, House of Representatives, Fifty-sixth Congress, first session, and was on May 2, 1900, referred to the House Committee on Military Affairs. It does not appear that it has thus far been acted upon by that committee.

### DESTITUTION IN ALASKA.

On the recommendation of the Acting Secretary of the Interior the Assistant Secretary of War on August 15, 1899, authorized the issue of rations to destitute Alaskan Indians, not to exceed 60 in number, of the Copper River district, for a period not exceeding ninety days. Issues were made to these Indians amounting in money value to $288.81.

On September 7, 1899, Capt. Edwin F. Glenn, Twenty-fifth Infantry, applied from Tyoonok, Alaska, for a long list of antiscorbutics (20 items) for issue to sick and destitute people in Cooks Inlet mining region, many of the items delicacies, but the Secretary of War on September 8, 1899, declined to authorize the issue; and on September 19, 1899, the following was issued in Circular No. 45, Headquarters of the Army, viz:

> By direction of the Secretary of War, the further purchases of subsistence stores for gratuitous distribution to destitute persons in Alaska will not be made, and commanding officers in all parts of that Territory will be held to a strict compliance with paragraph 1267 of the Regulations in each case of relief reported as made on their orders.

### ARMY TRANSPORT SERVICE.

On November 1, 1899, this office recommended to the Secretary of War that a board of officers, to consist of one officer each from the Inspector-General's Department, the Quartermaster's Department, the Subsistence Department, the Medical Department, and the line of the Army, be appointed to meet at New York City at the earliest date practicable to consider proposed changes in and additions to the regulations for the army transport service. Such a board was appointed by paragraph 21, Special Order No. 293, Headquarters of the Army, December 18, 1899, consisting of Col. Charles A. Woodruff, Subsistence Department; Maj. Henry S. Kilbourne, Medical Department; Maj. Francis B. Jones, Quartermaster's Department, and directed to meet at the Army Building, New York City, N. Y., at 10 o'clock a. m. December 20, 1899, or as soon thereafter as practicable, for the purpose of considering proposed changes in and additions to the regulations for the army transport service.

The new regulations having been submitted by the board, and having been revised by the Quartermaster-General and the Acting Commissary-General of Subsistence, were approved by the Secretary of War on May 5, 1900, and distribution was made of same May 28, 1900.

### REPORTS OF OFFICERS ON TRANSPORTS.

[Extracts from reports of Col. H. B. Mulford, First Nebraska Volunteer Infantry, United States transport *Hancock*, at sea, July 10, 1899.]

There has been no cause for complaint, with very few exceptions, either in the quantity or quality of the rations issued, which have been wonderfully well prepared and served, considering the limited facilities provided for the large number of men carried upon transports.

YOKOHAMA, *July 14, 1899.*

There was considerable complaint from the men regarding quantity and quality of rations for the first three or four meals out of Nagasaki, which complaint, upon investigation, proved to be well grounded, and seemed to be due to carelessness upon the part of the ship's cooks and bakers, and the cooks being suspected of selling some of the rations instead of cooking same, a sentry was placed over the cook house to prevent any sales, and Lieutenant White, regimental commissary officer, was placed in direct charge of the cook, in addition to his other duties. Since then no complaints have been made, and everything has run smoothly.

[Extract from report of Col. E. Rice, Twenty-sixth Regiment Infantry Volunteers, United States transport *Grant*, October 23, 1899.]

The table for the officers has been of the best, and the service excellent. Subsistence for the men has been of abundant and good quality, varied, and well cooked.

[Extract from report of Col. E. J. McClernand, Forty-fourth United States Volunteer Infantry, United States transport *Hancock*, at sea, December 16, 1899.]

It is believed if those submitted (bills of fare) from different regiments were compared by one officer an order might be promulgated setting forth the greatest variety of ways to prepare the ration aboard ship. Curry, to be eaten with rice, would be a valuable addition to the ration as troops enter the tropics, because of its digestive properties.

[Extract from report of Inspector-General Maj. P. W. West, United States Volunteers, on inspection of the United States army transport *Sherman*, made during the voyage of ship from San Francisco to Manila, P. I., September 23 to October 21, 1899.]

The characrer of the food and the method of serving it to the troops while on a long voyage demands special study. Life on shipboard is very monotonous and the soldier has little to do except wait for the next meal, and the result is he soon tires of the food furnished him. The ration furnished is ample; but I deem it quite essential that a special transport ration be supplied containing a greater variety of articles than that now furnished.

[Extract from report of an inspection of the United States transport *Meade*, made during the voyage from New York to Manila, in November and December, 1899, by Maj. S. C. Mills, inspector-general.]

The Commissary Department has met the requirements of the transport service with the same success it habitually shows. The men have been well fed during the voyage. I would recommend the issue of jams and canned fruits to troops at sea. The saloon table has been entirely satisfactory. We have lived as well as do the first-class passengers of the ordinary ocean liner. The transport commissary is given great latitude by the Department, and he has used it in a way which has produced a fine result.

[Extract from report of an inspection of United States army transport *Hancock*, made January 11, 1900, by Lieut. Col. E. A. Garlington, inspector-general, Department of Pacific and Eighth Army Corps.]

The stores furnished are generally of good quality; some deterioration observed, principally perishable stores—fresh vegetables.

[Extract from report of Maj. C. D. Cowles, Seventeenth Infantry, dated Manila, P. I., March 14, 1900, concerning voyage of transport *Sherman* from San Francisco to Manila.]

The accommodation, food, and health of the troops under my command were excellent during the voyage from San Francisco, Cal., to Manila, P. I., February 17 to March 14, 1900, on the United States army transport *Sherman*, Capt. James C. Read, commissary of subsistence, United States Volunteers, transport quartermaster, and C. H. Grant, master, together with all employees of the *Sherman*, were at all times courteous and attentive to their duties, which they performed in an efficient and satisfactory manner.

[From report of Capt. W. M. Coulling, assistant quartermaster, United States Volunteers, on United States army transport *Sheridan*, dated at sea, March 25, 1900, concerning the work of the ship during the twelve months ending February 18, 1900.]

In the matter of feeding officers and men it gives me pleasure to state that there has been general satisfaction in this respect, and I think the ship has been a credit to the Subsistence Department. The supplies, with very minor exceptions, have been excellent.

[Extract from a report of Capt. E. F. Glenn, Twenty-fifth Infantry, dated Manila, P. I., March 27, 1900, concerning the voyage of the transport *Thomas*, which left San Francisco March 1, and arrived at Manila March 27, 1900.]

The food supplied to the cabin passengers has been not only ample as to quality, but also as to variety. Although all of the meats and fresh vegetables have necessarily been kept in cold storage, they have seemed to lose nothing of freshness or flavor. I was specially careful to frequently taste each variety of both articles mentioned, and consider it rather remarkable that both should have been so uniformly fresh and palatable. The only instance of taint of any kind was in the case of some tripe served at lunch upon one occasion. This was not so much tainted, however, as to be unpalatable. The food at all times was well prepared and the service was satisfactory.

In addition to the daily inspection of the forenoon, an additional inspection of every meal served to the troops during the trip was made by an acting assistant surgeon of the command and of which a written report, containing the menu, the complaints, if any, and any comments by the inspecting officer, was required. These reports contain no complaints and none were submitted to me. From these and from personal knowledge I am glad to be able to state that the food served to the troops was all that could be desired. The limited number of troops and passengers rendered it practicable to vary the usual routine of boiled meats with roasts as often as desired. The bread prepared in the bakery was unusually uniform and good, being severed [served] alike in the saloon and mess room.

[Extract from report on voyage of the transport *Sheridan* from Manila to San Francisco, Cal., dated April 1, 1900, by Capt. Wilson Chase, Twenty-first Infantry.]

Food sufficient and in accordance with the regulations.

### REPORTS OF OFFICERS ON CHARTERED TRANSPORTS.

On August 11, 1899, Capt. Harlow L. Street, commissary of subsistence, United States Volunteers, transport commissary, reported to the Adjutant-General of the Army as follows in relation to the voyage of the *City of Para*, which carried troops under the command of Maj. J. A. Augur, Fourth Cavalry, from San Francisco to Manila:

Under date of July 29 the commanding officer, Maj. J. A. Augur, Fourth Cavalry, reported that the facilities for preparing the soldiers' food on board were inadequate, part of the apparatus being of obsolete pattern and unsatisfactory. He requested that an army range be put up. This paper was referred to the depot quartermaster at Honolulu, and, after inspection of the galley by him, a range was installed, the old steam cooker being left behind in his care, and the depot quartermaster at San Francisco informed of the fact.

It is further recommended that the present galley accommodation be enlarged by refitting part of the amidship cabin on main deck for a soldiers' galley, floored with brick, fitted with a ship's full-sized range and a complete apparatus for properly preparing food. An examination of the ship's plan shows this to be practicable. It is most necessary.

The troops have been well fed during the voyage; the men seemed to be contented and happy. Complaints of any kind have been rare.

[Extract from report of Maj. W. C. Brown, Forty-second United States Infantry Volunteers, United States transport *Dalny Vostok*, December 31, 1899.]

The food for the men has been satisfactory in every respect, and the amount of loss of meat and vegetables from spoiling has been so small as to be hardly worthy of mention.

As the regiment was last paid to include October 31, 1899, and consequently has two months' pay due, I authorized a credit of not to exceed $6 per man (but $2 credit being given at a time) in purchases from the subsistence department. The men availed themselves freely of this and exhausted the supply of the following articles: Apricots; butter; chocolate; corn, green; crackers, soda; crackers, ginger; ham, deviled; oysters; peaches; pears; pineapples; sardines; sirup, maple; soup, clam chowder; sugar, cut loaf; jam, blackberry; jelly, currant; lime juice; mustard, French; pickles, chowchow; pickles, gherkins; sauce, cranberry; cigars; pipes, brier No. 2; pipes, brier No. 4; tobacco, plug; tobacco, smoking, Duke's mixture; envelopes, letter, ordinarily good; ink, black; paper, note, ordinarily good; pencils, No. 2, American; penholders; matches, safety; towels, huck, No. 1; oranges; marmalade; candy, mixed; candy, lemon drops; candy, lime drops.

The messes for officers on these chartered transports were not conducted by the Subsistence Department. Prior to the issuance of the regulations for the Army Transport Service, which were approved by the Secretary of War on May 5, 1900, numerous complaints were made by officers on chartered transports that they were compelled to pay $1.50 per day for board, whereas officers on transports owned by the Government were charged only $1 per day.

## TROPICAL RATION.

On December 20, 1899, upon the recommendation of this office a board of officers, consisting of Lieut. Col. Charles A. Dempsey, First United States Infantry; Capt. Samuel W. Fountain, Eighth United States Cavalry, and Capt. Fred W. Foster, Fifth United States Cavalry, was appointed by the Secretary of War (Special Orders, No. 295, headquarters Army, December 20, 1899, paragraph 19), to meet at the War Department, Washington, D. C., at 10 a. m., December 22, 1899, or as soon thereafter as practicable, for the purpose of considering and reporting upon the matter of the composition of the ration for the use of troops in tropical climates. The board was authorized to call upon the Surgeon-General and the Commissary-General of Subsistence for such data and information as might be necessary.

On March 13, 1900, the board completed its labors in part and submitted a report on the composition of the ration for use in tropical climates. The proceedings and recommendations of the board in this connection, and the action thus far had upon the same, are as follows:

### PROCEEDINGS OF A BOARD OF OFFICERS CONVENED AT WASHINGTON, D. C., PURSUANT TO THE FOLLOWING ORDER:

Special Orders, No. 295.

HEADQUARTERS OF THE ARMY,
ADJUTANT-GENERAL'S OFFICE,
*Washington, December 20, 1899.*

[Extract.]

* * * * * * *

19. By direction of the Secretary of War a board of officers to consist of Lieut. Col. Charles A. Dempsey, First United States Infantry, Capt. Samuel W. Fountain, Eighth United States Cavalry, Capt. Fred W. Foster, Fifth United States Cavalry, is appointed to meet at the War Department, Washington, D. C., at 10 a. m., December 22, 1899, or as soon thereafter as practicable, for the purpose of considering and reporting upon the matter of the composition of the ration for the use of troops in tropical climates. The junior member of the board will act as recorder.

The board is authorized to call upon the Surgeon-General and the Commissary-General of Subsistence for such data and information as may be necessary.

Upon the final adjournment of the board the members thereof will return to their respective places of receipt by them of this order.

The travel enjoined is necessary for the public service.

* * * * * * *

By command of Major-General Miles:

H. C. CORBIN, *Adjutant-General.*

WASHINGTON, D. C., *March 13, 1900.*

The board met pursuant to the foregoing order at 10 o'clock a. m., December 28, 1899. Present, all the members.

A large amount of written and printed matter was submitted for the information and consideration of the board.

Among the most interesting and valuable of these papers were the proceedings of the three boards of officers convened, respectively, in Cuba, Porto Rico, and the Philippines, with the same object in view.

These proceedings were accompanied by a large number of letters, etc., from officers serving in those departments, treating of the ration and making suggestions in regard to modifications considered desirable in adapting it to the necessities of troops serving in a tropical climate.

After a thorough discussion of the subject it was determined that all reports and correspondence submitted to the board should be carefully read by each of the members, so that each should understand exactly what data was available before proceeding further.

The board then called on the Commissary-General and Surgeon-General, as directed in the order.

The Commissary-General promised any assistance in his power, and directed that all possible aid be afforded the board in its investigations by the members of his department. He also requested the board to consult with him frequently, and unhesitatingly ask for any further information or assistance it might require.

The question as to the desirability of making an issue of desiccated in lieu of fresh vegetables, when the latter could not be obtained, having come up, the Commissary-General stated that there was a large supply of these desiccated vegetables on hand at Santiago, and that he would direct an immediate issue for the purpose of determining this point, and would submit the report on the subject to the board as soon as it was received. He also directed that samples of the salted meats now supplied by the Subsistence Department be procured and submitted for the information of the board.

The Surgeon-General was equally obliging in his offers of assistance to the board, as was also Col. Charles Smart, medical department.

Colonel Smart has made an exhaustive study of the subject of food. He supplied the board with a large amount of literature on the subject by the leading authorities in the country, and in every way exerted himself to assist the board in its investigations.

The board, having carefully read the documents referred to it, proceeded to a full discussion and consideration of the changes in the ration proposed in the proceedings of the three boards, both with reference to the ration itself and the method of handling it.

The suggested changes are as follows:

The Philippine board recommends: The elimination of pork, the reduction of 4 ounces of fresh beef, 2 ounces of flour, and one-half the vinegar in each ration. To take the place of the articles reduced it recommends the addition of 2 ounces of rice and 2 ounces of dried fruit in lieu of the 4 ounces of beef reduced, the addition of 2 ounces of oatmeal in lieu of the 2 ounces of flour, the direct addition of 5 pounds of sugar to 100 rations, and the substitution of an equal measure of cucumber pickles in lieu of the vinegar reduced. It also leaves the drawing of salmon for one day in ten in lieu of fresh beef to the discretion of the company commander, and suggests that two days' bacon and eight days' beef be issued in each ten days' rations.

Since the proceedings of this board were submitted, 2 ounces of dried fruit have been added to the ration, consequently the desirability of reducing the beef ration in order to provide this article is no longer in question. The recommendation that the fresh meat ration be reduced in quantity was so opposed to all the teachings of experience, both in our own country and in Cuba and Porto Rico, that the board was unable to accept this recommendation as conclusive without further investigation. Two members of the board have served in Cuba and the third in Porto Rico, and their personal experience has been that as much fresh meat was desired and eaten as in the United States, and with no deleterious effect on the health of the men. The natives of these countries are also large meat eaters, when they are able to procure it, and the meat eaters are noticeably stronger and healthier looking than the poorer classes, who from necessity are mainly vegetarians. The board also interviewed a number of officers and other people who had been in the Philippines, and, taking all sources of information together, the board is of the opinion that it would be a mistake to make any fixed reduction in the meat ration.

If such a reduction is regarded desirable at any particular place or station by the immediate commanders it can be readily done by substituting for the portion undrawn some other article, or by regarding it as a saving, as provided later in these proceedings.

The other suggestions seem to possess considerable value, and have been considered, in making up the ration table, as finally submitted.

The Porto Rican board recommends: "That fresh beef be issued seven days in ten; that canned salmon be abolished as part of the ration; that oatmeal (20 ounces) be added to the ration in lieu of corn meal; that native beans be substituted for the white beans; that the fresh-vegetable component be increased one half."

If more than the authorized issue of fresh vegetables is required, the additional amount should be provided by the savings from the other components of the ration. In regard to the substitution of the native for the white bean, it would seem that there is no regulation preventing the Subsistence Department from supplying the former if desired. Both are beans in the meaning of the regulations, and both apparently possess about the same nutritive value. It is not considered desirable to hamper the operations of the Subsistence Department by prescribing any one variety of bean any more than one brand of flour.

The other suggestions are considered in the ration table.

The Cuban board recommends no change in the present ration except "that certain fixed savings be made from the different components and that the money value of these savings constitute a credit fund against which company commanders can draw in any article of food kept on hand for issue or sale by the Subsistence Department."

It thus appears that this board considers the present ration satisfactory, provided part of its components can be readily exchanged for others of equal money value.

The method of attaining this end proposed by Maj. A. L. Smith, Commissary of Subsistence, and endorsed by the board is ingenious, and might work in practice. It is objectionable in that it takes out of the control of the people who are actually using the ration the determination of the articles and quantities that shall be consumed and those that shall be saved. In some organizations certain articles may constitute the bulk of the savings, while in others entirely different articles may be saved, and it is certainly better to leave this question to the company commander, who is aquainted with the tastes and preferences of his men, than to make an invariable rule for all organizations. The present system of allowing the money received from the sale of savings to be paid into the company fund and to be expended therefrom from time to time for the improvement of the table fare of the organization has always given satisfaction and has stood the test of many years' experience. And such a radical departure from this system as that proposed can not be recommended.

The company fund is one feature of mess administration that has never been criticised, and it would be far better to increase its importance and usefulness by facilitating the transfer of the money value of any part of the ration to it, rather than take any step calculated to do away with it.

After a full discussion of the proposed changes in the ration, as indicated in the proceedings of these three boards and the accompanying documents, the board determined to make a fuller and more thorough investigation into the question by consulting all available sources of information. With this end in view, the board interviewed a number of persons, both soldiers and civilians, who were supposed to be more or less familiar with the subject, including a number of officers and enlisted men who had served in different tropical stations, and also consulted everything written or printed on the subject to which it had access. The board also examined the quality of the components of the ration now issued, particularly as to the salted meats. These latter are far superior to anything heretofore issued, and are so prepared as to insure the greatest possible keeping qualities in any climate. No exception can be taken to the quality of any part of the ration.

So long as the present high standard is maintained, no well-grounded complaint can be made on this score, and it should not be forgotten that many of the complaints made were directed not so much against the ration itself as against the quality of its components in particular instances.

On February 21 the Commissary-General referred to the board the reports of the various officers in the Department of Santiago, to whom a trial issue of desiccated potatoes had been made with a view of determining whether they would form a fit substitute for the fresh article when the latter could not be obtained.

Of ten reports made on the subject not one was favorable. The desiccated potatoes were universally condemned as unpalatable and wholly unsuited as a substitute for fresh vegetables.

On the same date Dr. Louis L. Seaman, of New York, who served as surgeon First Regiment United States Volunteer Engineers in Porto Rico, and as acting assistant surgeon in the Philippines, explained to the board his views as to the defects of the present ration and the modifications that he regarded as necessary to adapt it to the needs of troops serving in tropical climates. Dr. Seaman, who has undoubtedly devoted considerable thought to the subject, spoke very entertainingly of his experience and the conclusions he had drawn therefrom. He has very decided ideas as to the diet suitable for the tropics, and expressed himself as much pleased when shown that the ration recommended by the board was perfectly adapted to the formation of such a dietary as he considered desirable.

Any ration adopted must comprise a meat, a bread, a vegetable, a seasoning, and a coffee, sugar, and fruit component, and when a careful comparison is made between the articles now composing these components and all those suitable for the purpose it will readily be seen that no important addition can be made to the list, and that, in fact, the articles composing the ration must be about the same in all climates.

The problem is really to find such a ration as will, by substitutions among its various ingredients, be suitable for all climates.

Such a ration should possess the following qualifications:

It should be nutritious, sufficient in quantity, easy of transportation, and should consist of as few different articles as possible. It should be proof against climatic changes and susceptible at all times to the greatest flexibility and elasticity, suitable to either the tropics or the polar circle, and capable of affording such changes in diet as will be best calculated to preserve the health of the soldier under the conditions surrounding him.

In cold countries nitrogenous food and that calculated to produce bodily heat are necessary, but in warm climates such foods may not be needed, and the ration should accommodate itself to the needs of the soldier everywhere.

In the North it should supply him with an abundance of the heat-producing elements needed, while in the tropics it should supply him with a diet suited to his environment, and when he is called on for any extra exertion it should readily adapt itself to the increased demands of the system.

The following ration is submitted as one which, taken in connection with the suggested changes in the regulations referred to later, will perfectly reconcile these conflicting considerations, while at the same time entailing little or no extra expense on the Subsistence Department.

The kinds and quantities of articles composing the ration for troops, and the quantities computed for 100 rations, are as follows:

| Articles. | Quantities per ration. | | Quantities per 100 rations. | | |
|---|---|---|---|---|---|
| | *Ounces.* | *Gills.* | *Pounds.* | *Ounces.* | *Galls.* |
| Meat components: | | | | | |
| Fresh beef | 20 | | 125 | | |
| or fresh mutton, when the cost does not exceed that of beef | 20 | | 125 | | |
| or bacon | 12 | | 75 | | |
| or dried fish | 14 | | 87 | 8 | |
| or pickled, fresh, or canned fish | 18 | | 112 | 8 | |
| (Fresh fish dressed, head and tail on.) | | | | | |
| Bread component: | | | | | |
| Hard bread | 16 | | 100 | | |
| Flour | 18 | | 112 | 8 | |
| Baking powder for troops in the field, or when ovens are not available | $\frac{16}{25}$ | | 4 | | |
| or hops when ovens are available | $\frac{1}{50}$ | | | 2 | |
| or dried or compressed yeast when ovens are available | $\frac{1}{25}$ | | | 4 | |
| Vegetable components: | | | | | |
| Beans | $2\frac{2}{5}$ | | 15 | | |
| or rice | $1\frac{3}{5}$ | | 10 | | |
| or hominy | $1\frac{3}{5}$ | | 10 | | |
| or oatmeal | $1\frac{3}{5}$ | | 10 | | |
| Potatoes | 16 | | 100 | | |
| or potatoes, 12¾ ounces, and onions, 3¼ ounces | 16 | | 100 | | |
| or potatoes, 11¼ ounces, and canned tomatoes, 4¾ ounces | 16 | | 100 | | |
| or potatoes, 11¼ ounces, and other vegetables, not canned, 4¾ ounces, when they can be obtained in the vicinity or transported in a wholesome condition from a distance | 16 | | 100 | | |
| Coffee, sugar, and fruit component: | | | | | |
| Coffee, green | $1\frac{3}{5}$ | | 10 | | |
| or coffee, roasted | $1\frac{7}{25}$ | | 8 | | |
| or coffee, roasted and ground | $1\frac{7}{25}$ | | 8 | | |
| or tea, green or black | $\frac{8}{25}$ | | 2 | | |
| Sugar | $3\frac{1}{5}$ | | 20 | | |
| or molasses | | $\frac{64}{75}$ | | | 2⅔ |
| or cane sirup | | $\frac{64}{75}$ | | | 2⅔ |
| Dried fruit | $1\frac{3}{5}$ | | 10 | | |
| Seasoning components: | | | | | |
| Vinegar | | $\frac{4}{25}$ | | | ½ |
| Cucumber pickles | | $\frac{4}{25}$ | | | ½ |
| Salt | $\frac{16}{25}$ | | 4 | | |
| Pepper, cayenne or black | $\frac{1}{25}$ | | | 4 | |
| Soap and candle components: | | | | | |
| Soap | $\frac{16}{25}$ | | 4 | | |
| Candles (when illuminating oil is not furnished by the Quartermaster's Department) | $\frac{6}{25}$ | | 1 | 8 | |

MEAT COMPONENT.

In the opinion of the board the meat ration should not be reduced except in particular instances, the necessity in each case being determined by the immediate commander on the ground.

The meat ration has been simplified by dropping from it the alternative components pickled beef and pork. With the present improved methods of curing and packing the bacon supplied by the Subsistence Department there is no difficulty in delivering it in perfect condition wherever the needs of the service require; and as the only logical reason for the issue of barreled and pickled meats was their supposed superior keeping qualities, it is thought the time has now come to drop these undesirable articles from the list of meats issued as part of the regular ration.

Neither is wanted by the people who use the ration, and their issue always causes dissatisfaction. The other meat components have been left as at present prescribed, except that the amounts of pickled, canned, or fresh fish have been made uniform.

Whenever fresh meat is available, at least six days' fresh beef or mutton should be issued in each ten days' rations, and three days' bacon; the remaining one day's ration may be fish when circumstances are favorable and when fish is desired by the commander of the organization.

### BREAD COMPONENT.

The bread ration has been simplified by eliminating corn meal and providing that it shall consist of 1 pound of hard bread or 18 ounces of flour with the necessary leavening component. The present regulation provides for the issue of baking powder when troops are in the field, but when in garrison requires that it or its equivalent shall be purchased from the savings of the flour ration.

It is not seen why this distinction should be made, and it is therefore recommended that either baking powder, yeast, or hops shall always be issued in connection with the flour ration.

### VEGETABLE COMPONENT.

The only change made in this component is the striking out of dried pease and the substitution therefor of oatmeal, to be issued at the same rate as rice.

Pease have not proved a satisfactory component of the ration. They are only used in soup, and for this purpose beans are fully as nutritious and far more palatable, while the beans can be cooked in other ways. No company commander will draw the pease if it can be avoided, as he has found by experience that they are not liked by his men, and that a very limited amount of them can be utilized at best. Oatmeal is a favorite article of food with the soldier, both in temperate and tropical climates, and large quantities are purchased and paid for out of the company funds and used throughout the service, while in the Philippines it has been made a part of the regular ration, with very satisfactory results. The board therefore recommends that oatmeal form one of the components of the vegetable ration.

### COFFEE, TEA, SUGAR, AND DRIED FRUIT COMPONENT.

Ground coffee has been added as an alternative component. The necessity for such an issue will seldom occur, but there have been instances when an issue of this kind would have been very useful. This ground coffee should always be packed in air-tight cans.

The amount of sugar in the present ration was fixed before dried fruit was made one of its components, and is entirely inadequate to furnishing the necessary sweetening for both the fruit and the coffee or tea.

In the proposed ration an increased amount of sugar is supplied without increasing the total cost of the ration by reducing the fruit ration from 12½ pounds per 100 rations to 10 pounds, and increasing the sugar ration from 15 pounds per 100 rations to 20 pounds. The 10 pounds of dried fruit and 5 pounds extra of sugar, taken together, constitute a more desirable issue than 12½ pounds of fruit alone.

### SEASONING COMPONENTS.

In lieu of the present vinegar component of 1 gallon to 100 rations, the proposed ration gives one-half gallon of vinegar and one-half gallon of cucumber pickles.

The present vinegar ration is ample for all purposes, including the manufacture of pickles, if fresh cucumbers are available, but in the majority of instances these latter can not be obtained. The suggested ration will give all the vinegar needed in serving the rest of the ration, and at the same time supply a much needed antiscorbutic in the shape of pickles.

The issue of either black or cayenne pepper is recommended instead of black only, as at present.

Some samples of a combined meat and vegetable ration, prepared by the Franco-American Food Company, and preserved in air-tight cans, were presented to the board.

The materials of this ration were placed in the can raw, and then cooked, thus preserving all the extractive and nutritive qualities of the ingredients. This ration is prepared for use by placing the can in boiling water about 15 minutes before opening. On trial the ration was found to be exceedingly palatable. It formed a delicious rich stew, and should it be found by experience that it possesses the necessary keeping qualities, and can be supplied to the soldiers in the same condition and of the same quality as the samples submitted to the board, it would form a most valuable addition to the ration on active service—when fresh beef and fresh vegetables could not be supplied.

The board recommends that a limited quantity of these rations be procured and tested, both as to keeping qualities and acceptability for field service. From the result of this test it can then be determined whether it is advisable to supply this ration for field service; and if so, to what extent, and under what circumstances.

In connection with this proposed ration table, the board recommends that paragraphs 1258 and 1269 Army Regulations be amended to read as follows:

"1258. Issues of rations to troops will be made on ration returns signed by the immediate commanders of the organizations, and the issues ordered by the commanding officer of the post or station. Ration returns will be made ordinarily for a few days at a time, for the individuals of the organization actually present, and for only such quantities as the organization can receive and properly care for, and will be presented at the place where rations are due. *Should the commander of any organization desire to substitute for any component of the ration any other article of food for sale or issue by the Subsistence Department, he will so state on the ration return, and, when public loss will not ensue, the money value of the rations retained will be issued in the articles asked for, except, that where contracts exist for supplying fresh beef, at least sixth-sevenths of the authorized beef ration will be drawn in kind.* Rations will not be issued for a past period, if troops have been sufficiently subsisted; nor will back rations be purchased as savings."

"1269. Articles of the ration due a bakery, a company, or any organization, not needed for consumption, will be retained by the commissary if required for reissue, and will be purchased as savings at the invoice price, but where contracts exist for supplying fresh beef, savings and sales of fresh beef (except of that issued to the sick in hospital, the detachment of the hospital corps, and the hospital matron serving therein) will not exceed one-seventh of the authorized beef issue. The commissary will purchase the savings of hospitals at cost prices, when the surgeon in charge so desires, but will not purchase savings of companies, bakeries, or any organization when public loss would result. When not required for reissue, savings may be sold to any person."

These amended regulations will give the greatest possible flexibility and elasticity to the ration. They will permit company commanders to exchange directly any part of the ration for its equivalent money value in any other article supplied by the commissary, or at their discretion to receive the money value of the undrawn portion in cash, this to be taken up in the company fund and used for the purchase of vegetables and such other articles of food as may be desired.

In order to avoid loss either to the United States or to the contractor, this power has been limited as regards fresh beef, whenever contracts exist for the supply of this article. Moreover, under ordinary circumstances no greater saving than that authorized would be made.

The immediate commander can thus vary the diet of the soldier to almost any extent, the only limitation being that the meat drawn must be at least 60 per cent of the full ration.

There is a marked difference between the ration and the diet of the soldier.

The ration is the allowance for the subsistence of one person for one day, and consists of the meat, the bread, the vegetable, the fruit, the coffee and sugar, the seasoning, and the soap and candle components, most of the components consisting of several alternative articles.

The diet is what is actually prepared in the company kitchen for consumption by the soldier.

The company fund is of the greatest assistance in enabling a satisfactory diet to be prepared from the ration. It is difficult for the Subsistence Department to supply all the varied articles desired for this purpose, but with a cash fund to draw on each company commander can usually make local purchases of fresh vegetables, etc., sometimes one kind and sometimes another, when probably at no time could a sufficient amount of any one article be procured to supply the whole command.

Thus a larger and more varied bill of fare can be furnished the soldier than would be possible from any fixed ration alone, while at the same time no additional expense is imposed on the Subsistence Department.

Every effort should be made to promote the accumulation of such a fund by facilitating the exchange of any part of the ration for its money value when not desired or not available for consumption.

The soldier is not required to eat any article because it is a part of the ration; he may transform it into some other article of food which he likes better or which is better for him under local climatic conditions. Thus any component of the ration may be reduced in quantity, and the money value of the part not issued may be drawn in other articles or in cash, as the company commander may elect, and the soldier can have any variation of his diet within certain money value limits which his officers consider necessary.

The ration is fixed and is sufficient for subsistence under any conditions, but the dietary depends on the judgment of the company officers and the ability of the company cooks.

If a change of diet is advisable, it lies with the company commander to carry it into effect. If the change is desirable on medical grounds, medical officers should communicate their views to these responsible officers, and the change can be effected without difficulty.

The ration need not be changed to effect a change in the diet.

In order to adapt the ration to the necessities of troops traveling otherwise than by marching it is recommended that paragraph 1256, Army Regulations, be amended to read as follows:

"When troops travel otherwise than by marching, or when for short periods they are separated from cooking facilities and do not carry cooked rations, the following articles shall be issued in lieu of the corresponding components of the regular ration: Twelve ounces canned cooked meat or canned dried beef, in lieu of fresh or salt meat; 5 ounces canned baked beans, in lieu of dried beans; 4 ounces canned fruit, in lieu of dried fruit, and 21 cents in lieu of coffee and sugar. All other components of the regular ration will be issued in kind or purchased as savings, as prescribed in paragraph 1269, Army Regulations (as amended). When troops arrive at their destination the canned food and coffee money which were issued for time in excess of that actually consumed in the journey will be immediately turned in to the commissary and the corresponding components of the regular ration issued in their stead."

If it is not desired to draw the other components in kind their commutation will admit of buying any condiment desired, and at least one additional article daily.

That article can be varied within limits by the company commander to suit the taste and convenience of the soldiers. It is also recommended that whenever practicable the meat component of this ration be varied from day to day.

The present component, canned corned beef, although palatable for a few meals, becomes distasteful if used two days in succession. If canned dried and chipped beef were issued on alternate days, it would add very much to the acceptability of this ration.

The board has spared no effort to make itself thoroughly familiar with the subject submitted for its consideration. It has been in session daily since its organization, has carefully considered every suggestion made in reference to changes or improvements in the ration, has made extensive inquiries as to the acceptability and healthfulness of the present ration, and has examined and tested numerous articles prepared in various ways, which have been recommended by different people, manufacturers and others, as suitable components of the ration.

The present ration is the product of a century's experience. It is based on the recommendations of several generations of army officers, who, by practical experience, both in the field and in garrison, and by service in all parts of the United States, from Alaska and Dakota in the North to Arizona, Texas, and Florida in the South, have learned the food best adapted to the needs of the soldier under all circumstances of service. It is composed of the articles which are ordinarily included in the diet of the class from which the American soldier is mainly drawn, and to the use of which his system has always been accustomed. It is in all essential features satisfactory.

Change is not necessarily improvement, and the board has been chary of recommending any radical change in the components of the ration. Of course improved methods of preparing and preserving food may at any time make available as a component of the ration some article which previously has been unattainable, and for this reason the board reccommends for trial the combined meat and vegetable ration previously referred to. If this article stands the test suggested it will prove an exceedingly valuable addition to the field ration under certain circumstances, but the board only recommends unqualifiedly as part of the regular ration those articles whose value has been proved.

C. A. Dempsey,
*Lieut. Col., First Infantry, President.*
S. W. Fountain,
*Captain, Eighth Cavalry, Member.*
F. W. Foster,
*Captain, Fifth Cavalry, Recorder.*

The foregoing proceedings were referred, by direction of the Secretary of War, to the Acting Commissary-General of Subsistence, on March 17, 1900, and were returned with the following indorsement:

[Second indorsement.]

WAR DEPARTMENT,
OFFICE COMMISSARY-GENERAL OF SUBSISTENCE,
*Washington, May 15, 1900.*

Respectfully returned to the Adjutant-General of the Army with the following remarks:

By paragraph 1251 of the Army Regulations the ration is defined as being the allowance for subsistence for one person for one day, and while it has been decided that the ration is not an emolument, there must be some fixed and established components the issue of which in due proportions constitutes the supply and allowance to which an enlisted man is by the terms of his contract with the Government entitled. Therefore the ration should include all those components which are likely to be issued under varying circumstances of the service.

The board has recommended that a certain preparation of canned meat—in reality a beef stew—with vegetables, should be experimented with, and recommends that a limited quantity of these rations be procured in order to decide both as to keeping qualities and acceptability to field service. If the result of this test is satisfactory, the board states it can be determined whether it is advisable to supply this ration for field service, and if so, to what extent and under what conditions. I am strongly of the opinion that such an article as this should form part of the ration of our troops during active service in the field when fresh meat can not be procured, but when practicable to cook their food, and therefore, in order to make possible the issue of such an article, I think it should be included as one of the meat components of the ration, provided the tests are satisfactory.

I see no reason why the amount of canned fish (salmon) should be increased from 16 to 18 ounces, and therefore recommend that it be issued as at present authorized by the President—that is, 1 pound per ration.

It is also my opinion that soft bread should be prescribed as one of the components of the ration, as there are times when it is possible for the department to provide soft bread under contract; and as the advantage of being able to supply soft bread is particularly noticeable with volunteer troops, our Regulations should be framed so that they will apply to such, as when the volunteers first go into the field, coming as they do from all classes, it frequently happens that the organizations have no competent bakers.

A large portion of the people coming from the Southern States have been accustomed to the use of corn meal, and when they are enlisted either as regulars or volunteers, particularly as volunteers, they desire to be furnished with that particular article of food, therefore, in my opinion, corn meal should be continued as one of the components of the ration.

I agree thoroughly with the board in excluding pease as one of the vegetable components of the ration and substituting therefor oatmeal at the same ratio.

The coffee, sugar, and fruit component of the ration as established by the board meets with my approval.

I concur in the board's recommendation concerning the reduction of the vinegar component to one-half gallon per 100 rations and the substitution of one-half gallon cucumber pickles for the one-half gallon of vinegar omitted; but I consider that the issue of cayenne pepper as recommended by the board is entirely too large and recommend that cayenne pepper be issued at 2 ounces to the 100 rations.

The soap and candle components are not changed by the board, and I have no recommendation to make concerning them.

I submit herewith (Appendix A) a modification of the ration submitted by the board, embodying my suggestions as above, and if it is approved suggest that it may be published as paragraph 1253 of the Army Regulations.

The recommendation of the board for the modification of paragraph 1258 of the Army Regulations does not meet with my approval, inasmuch as the suggested addition permits of drawing of any article of food which is kept for sale or isued by this department, a condition which, if approved, would make it very difficult to account for the stores, and would almost preclude the possibilty of volunteers learning how to obtain their supplies. Furthermore, it allows savings to be made on fresh beef, and this does not seem necessary in view of the addition recommended to paragraph 1253, and which was published in General Orders, No. 78, Headquarters Army, 1899, and moreover the troops can now, under existing regulations, obtain all the benefits of substituting other articles of food by purchasing the same from their company funds.

I do not approve of the change recommended by the board in paragraph 1269, and recommend that the above paragraph be amended to read as follows—the changes now recommended by me have already been published in orders from the War Department:

"1269. Articles of the ration (excluding fresh vegetables, soft bread, dried fruits, fish, and baking powder, hops, dried or compressed yeast) due a bakery, a company, or an organization, not needed for consumption, will be retained by the commissary if required for reissue, and will be purchased as savings at the invoice prices. Savings and sales of fresh beef (except that issued for the sick in hospital, the detachment of the hospital corps, and the hospital matron serving therein) are prohibited; baking powder issued but not used will be returned to the commissary. The commissary will purchase the savings of hospitals, including fresh beef, at cost prices, when the surgeon in charge so desires, but will not purchase savings of companies, bakeries, or any organization when public loss would result. When not required for reissue, savings may be sold to any person."

The board also recommends an amendment to paragraph 1256, which prescribes the "travel ration." With this recommendation I totally disagree, for the reason that any number of men, less than a company, traveling unaccompanied by a commissioned officer, by the proposed amendment could not possibly carry out its provisions.

It is therefore recommended that paragraph 1256 be published to read as follows—the modifications being the substitution of canned meats instead of canned beef, the allowance of the issue of canned tomatoes at the rate of 1 pound per man per day irrespective of the number of days required in the travel, and the issue of roasted and ground coffee. The regulation as it now stands prohibits the issue of canned tomatoes, unless the men are traveling for more than four days. I see no reason why this exception should be made.

"1256. When troops travel otherwise than by marching, or when for short periods they are separated from cooking facilities and do not carry cooked rations, the following articles will be issued in lieu of all components of the ordinary ration. They constitute the travel ration:

| Articles. | | Per 100 rations. |
|---|---|---|
| Soft bread | pounds | 112½ |
| or hard bread | do | 100 |
| Canned meat | do | 75 |
| Baked beans, 1-pound cans | number | 33 |
| or baked beans, 3-pound cans | do | 15 |
| Canned tomatoes | pounds | 100 |
| Coffee, roasted, or roasted and ground | do | 8 |
| Sugar | do | 20 |

"When troops arrive at their destination or rejoin their station subsistence upon the ordinary ration will be resumed immediately, and the travel rations remaining on hand in good condition, which were issued in excess of the time actually consumed by the journey, will be exchanged by the commissary for the regular ration issued at the station."

J. F. Weston,
*Acting Commissary-General of Subsistence.*

## APPENDIX A.

1253. The kinds and quantities of articles composing the ration for troops when cooking is practicable, and the quantities computed for 100 rations, are as follows:

| Articles. | Quantities, per ration. | | Quantities, per 100 rations. | | |
|---|---|---|---|---|---|
| | *Ounces.* | *Gills.* | *Pounds.* | *Ounces.* | *Gallons.* |
| Meat components: | | | | | |
| Fresh beef | 20 | | 125 | | |
| or fresh mutton, when the cost does not exceed that of beef | 20 | | 125 | | |
| or bacon | 12 | | 75 | | |
| or dried fish | 14 | | 87 | 8 | |
| or pickled fish | 18 | | 112 | 8 | |
| or fresh fish (dressed, head and tail on) | 18 | | 112 | 8 | |
| or canned fish | 16 | | 100 | | |
| Bread components: | | | | | |
| Flour | 18 | | 112 | 8 | |
| or soft bread | 18 | | 112 | 8 | |
| or hard bread, to be ordered issued only when impracticable to use flour or soft bread | 16 | | 100 | | |
| or corn meal | 20 | | 125 | | |

| Articles. | Quantities, per ration. | | Quantities, per 100 rations. | | |
|---|---|---|---|---|---|
| | *Ounces.* | *Gills.* | *Pounds.* | *Ounces.* | *Gallons.* |
| Bread components—Continued. | | | | | |
| For troops in the field— | | | | | |
| Baking powder, when ovens are not available | 16/25 | .......... | 4 | .......... | .......... |
| or hops, when ovens are available | 1/50 | .......... | .......... | 2 | .......... |
| or dried or compressed yeast, when ovens are available | 1/25 | .......... | .......... | 4 | .......... |
| (Baking powder, hops, dried or compressed yeast will not be issued to troops in garrison, but only when in the field.) | | | | | |
| Vegetable components: | | | | | |
| Beans | 2 2/5 | .......... | 15 | .......... | .......... |
| or rice | 1 3/5 | .......... | 10 | .......... | .......... |
| or hominy | 1 3/5 | .......... | 10 | .......... | .......... |
| or oatmeal | 1 3/5 | .......... | 10 | .......... | .......... |
| Potatoes | 16 | .......... | 100 | .......... | .......... |
| or potatoes 12⅘ ounces and onions 3⅕ ounces | 16 | .......... | 100 | .......... | .......... |
| or potatoes 11⅕ ounces and canned tomatoes 4⅘ ounces | 16 | .......... | 100 | .......... | .......... |
| or potatoes 11⅕ ounces and other vegetables not canned 4⅘ ounces, when they can be obtained in the vicinity or transported in a wholesome condition from a distance | 16 | .......... | 100 | .......... | .......... |
| Coffee, sugar, and fruit components: | | | | | |
| Coffee, green | 1 3/5 | .......... | 10 | .......... | .......... |
| or roasted coffee | 1 7/25 | .......... | 8 | .......... | .......... |
| or roasted and ground coffee | 1 7/25 | .......... | 8 | .......... | .......... |
| or tea, black or green | 8/25 | .......... | 2 | .......... | .......... |
| Sugar | 3⅕ | .......... | 20 | .......... | .......... |
| or molasses | .......... | 18/25 | .......... | .......... | 2¼ |
| or cane sirup | .......... | 18/25 | .......... | .......... | 2¼ |
| Dried fruit | 1⅗ | .......... | 10 | .......... | .......... |
| Seasoning components: | | | | | |
| Vinegar | .......... | 4/25 | .......... | .......... | ½ |
| Cucumber pickles | .......... | 4/25 | .......... | .......... | ½ |
| Salt | 16/25 | .......... | 4 | .......... | .......... |
| Pepper, black | 1/25 | .......... | .......... | 4 | .......... |
| or pepper, cayenne | 1/50 | .......... | .......... | 2 | .......... |
| Soap and candle components: | | | | | |
| Soap | 16/25 | .......... | 4 | .......... | .......... |
| Candles (when illuminating oil is not furnished by the Quartermaster's Department) | 6/25 | .......... | 1 | 8 | .......... |

Ordinarily fresh beef will be issued seven days in ten; salt meats, three days in ten. These proportions of the meat ration may, however, be varied by commanding officers, according to the necessities of the service on which the troops may be engaged.

The Commissary-General of Subsistence is authorized to reduce, on the recommendation of chief commissaries of the various departments, the amount of beef issued, and in lieu thereof to issue the equal money value of the beef thus reduced in ham or other articles of sales.

For troops serving in the Department of Alaska, the allowance of bacon is 1 pound per ration, and of fresh vegetables 1¼ pounds per ration.

In adjusting charges to be made against enlisted men or others on account of increased expense to the Government for their subsistence, the value of the ordinary ration will be estimated at 18 cents, that of the travel ration at 40 cents.

[Third indorsement.]

ADJUTANT-GENERAL'S OFFICE,
*Washington, May 31, 1900.*

Respectfully referred to the Surgeon-General of the Army for remark and recommendation.

JOHN A. JOHNSTON,
*Assistant Adjutant-General.*

[Fourth indorsement.]

WAR DEPARTMENT,
SURGEON-GENERAL'S OFFICE,
*June 4, 1900.*

Respectfully returned to the Adjutant-General of the Army. In my opinion, the principle on which our present army ration is based is correct: The Subsistence Department to provide certain staple articles of food, in quantity sufficient for the needs of the troops under the most severe tests of hard work and climatic exposures, the said articles having a money value which will enable company commanders and others responsible for the messing of the men to vary the diet when needful by purchases from the Subsistence Department or sometimes from outside sources. The articles selected for issue and the quantities allowed have been the result of many years of experience, both in time of peace and in time of war. The board therefore makes no suggestion looking to a radical departure from present methods. I agree with the Acting Commissary-General of Subsistence in his remarks on soft bread, corn meal, and cayenne pepper, and in those of the board in respect to pease, oatmeal, coffee, sugar, fruit, and vinegar.

The amendments of Army Regulations proposed by the board and disapproved of by the Acting Commissary-General of Subsistence have a reference to ways and means rather than to food and its variety, from the medical point of view, except in the case of Army Regulations 1256, in which I concur in the substitution of canned meats instead of canned beef, and the allowance of 1 pound of canned tomatoes per ration.

I commend the remarks of board on the distinction to be made between the fixed ration and the varied dietary which may be provided from it.

GEO. M. STERNBERG,
*Surgeon-General, United States Army.*

Final action by superior authority has not yet been taken upon these proceedings and recommendations.

## THE EMERGENCY RATION.

On the 17th of April, 1895, the Commissary-General of Subsistence addressed a communication to the Adjutant-General of the Army on the subject of an emergency ration, in which he said:

> While no army in the world is so well supplied with food as is ours, there is believed to be still wanting in our service a special and distinctive ration (for use in substitution of the ordinary ration), to be carried on the person of the soldier on emergent occasions where transportation is limited or is not available. Such a ration should combine the qualities of wholesomeness, palatability, proper nutritive value, and portability, and should, in addition, possess good keeping qualities.

This communication was submitted to the Secretary of War by the Lieutenant-General, by indorsement of April 24, 1895, "recommending favorable action. The subject is one of importance." The Secretary of War approved the recommendation May 6, 1895, and an official copy of the letter and indorsements was referred by the Adjutant-General to the commanding generals of the eight military departments on May 11, 1895, with instructions to convene boards in their respective departments, to consist in each of one officer of the Subsistence Department, one of the Medical Department, and three of the line, to consider and recommend a proper ration for troops operating in emergencies, and directing them to instruct such boards to give consideration to the points mentioned in the Commissary-General's letter. The reports of the boards were required to be forwarded to the Adjutant-General, with such remarks or suggestions by department commanders as they might desire to make.

Upon the final report of action by the boards an order was issued by the Secretary of War (Special Orders, No. 74, Headquarters Army, March 28, 1896, paragraph 3) constituting a board of officers, to consist of Maj. Charles Smart, surgeon; Maj. Charles A. Woodruff, commissary of subsistence; Maj. Ernest A. Garlington, inspector-general; Capt. Louis A. Craig, Sixth Cavalry, and First Lieut. William C. Brown, First Cavalry, to meet in Washington, D. C., March 31, 1896, or as soon thereafter as practicable, to examine the reports of the boards which were convened in the several military departments, "to consider and recommend a proper ration for troops operating in emergencies," and such views and suggestions as the Major-General Commanding the Army and the Commissary-General of Subsistence might lay before it. The board was directed to make recommendations upon the subject and report upon the minimum amount of articles of food necessary to sustain a soldier in health and activity while in active service in the field for a limited period.

Upon the report of this board the following order was issued:

GENERAL ORDERS, No. 49.

HEADQUARTERS OF THE ARMY,
ADJUTANT-GENERAL'S OFFICE,
*Washington, December 5, 1896.*

1. The following order has been received from the War Department:

"WAR DEPARTMENT, *Washington, December 5, 1896.*

"Under the authority vested in him by section 1146, Revised Statutes, the President hereby establishes an emergency ration for troops operating for short periods under circumstances which require them to depend upon supplies carried upon their persons. Its component parts are as follows: Bacon, 10 ounces; hard bread, 16 ounces; pea-meal, 4 ounces, or an equivalent in approved material for making soup; coffee, roasted and ground, 2 ounces, or tea, one-half ounce; saccharin, 4 grains; salt, 0.64 ounce; pepper, 0.04 ounce; tobacco, one-half ounce.

"DANIEL S. LAMONT,
"*Secretary of War.*"

2. The Secretary of War directs that this emergency ration be resorted to only on occasions arising in active operations when the use of the regularly established ration may be impracticable; that, although its nutritive qualities permit its use on half allowance, it will not be so used except in cases of overruling necessity, and never for a longer period than ten days; and that not more than five days' emergency rations be carried on the person at one time.

3. By direction of the Secretary of War the Subsistence Department will provide tough paraffin paper for wrapping the bacon; will furnish hard bread in grease-proof packages, the pea-meal in cylindrical packages, and the coffee, tea, saccharin, salt, pepper, and tobacco in suitable packages.

By command of Major-General Miles:

GEO. D. RUGGLES,
*Adjutant-General.*

A practical test of the use of the above-prescribed emergency ration by United States troops on active service was made at Fort Sill, Okla., in May, 1897, upon which Deputy Surgeon-General Charles Smart, who accompanied the command as medical officer, in rendering his report, suggested that certain requirements be omitted from paragraph 2, General Orders, No. 49, so that it would read as follows:

2. The Secretary of War directs that the emergency ration will never be used for a longer period than ten days, and that not more than five days' ration be carried on the person at one time.

In forwarding the report to the Adjutant-General of the Army the Surgeon-General of the Army said:

In my opinion this is an extremely valuable report, and reflects great credit upon Lieutenant-Colonel Smart, deputy surgeon-general, whose carefully conducted experimental test shows that the emergency ration for five days may be made to serve for ten days without any injury to the health of the troops using it. I concur in the recommendation made by Lieutenant-Colonel Smart at the close of his report.

On the 20th of January, 1899, this office made application to the Secretary of War for an order convening a board of officers—

To meet at the Army Building, New York City, N. Y., February 15, 1899, for the purpose of examining, testing, and reporting upon the various emergency rations as to their adaptability for use in the Army, and to compare the present authorized emergency ration with those submitted, the board to be authorized, on application, to make a practical test of the various rations with United States troops to be designated when the board is ready to make the practical trials.

Upon which an order was issued (Special Orders, No. 17, Headquarters Army, January 21, 1899, paragraph 31) appointing a board of officers, to consist of Col. Charles A. Woodruff, assistant commissary-general of subsistence, United States Army; Lieut. Col. Charles Smart, deputy surgeon-general, United States Army, and Maj. Louis A. Craig, assistant adjutant-general, United States Volunteers (captain, Sixth United States Cavalry), to meet February 15, 1899, at the Army Building, New York City, for the purpose of examining, testing, and reporting upon the various emergency rations as to their adaptability for use in the Army, and to compare the present authorized emergency ration with those that may be submitted to the board. The board was authorized, on application, to make a practical test of the various rations with United States troops to be designated when the board was ready to make the practical tests.

On the 5th of January, 1900, this office addressed the Adjutant-General of the Army upon the subject of the emergency ration, stating that—

> The present emergency ration is one in name only, in that it fails to meet the essential military requirements for an emergency ration.
>
> First. Such a ration should be small in volume and of a style of package easily transported in the pockets or haversacks of the men.
>
> Second. Articles composing this ration should be capable of being eaten without preparation necessitating the use of fire.
>
> Attention is invited to the fact that the emergency ration which this department is now supplying to the troops in the field is not the one described in the General Orders previously referred to, but is a preparation known as the "Standard Emergency Ration."
>
> Because of this it is suggested that this matter be brought to the attention of the board now in session here, with a view to establishing a ration so that this department may buy what is desired, rather than what is not. If the Standard Emergency Ration answers the purpose, let it be established; if not that, then something else.

In accordance therewith the board of officers convened by Special Orders, No. 295, Adjutant-General's Office, series 1899, to report upon a ration for use of troops serving in the tropics, was further ordered to investigate and report upon a suitable ration for use of troops under emergency. The report of the board on this subject has not yet been received.

### AUTHORITY FOR DISPOSITION OF SUBSISTENCE STORES.

On March 19, 1900, I invited the attention of the Secretary of War to the fact that—

> There is now no authority in an executive officer of the Government for disposing, by sale to the public, of such subsistence stores in good condition intended for issues or for sales to officers and enlisted men as have accumulated in excess of amounts required for use in the military service at subsistence depots, military posts, or in the field, and which can not, with economy and advantage, be shipped to other depots, posts, or places for military use.

I therefore submitted the recommendation that Congress be requested to enact a law which shall authorize the public sale of accumulations of subsistence stores in good condition, and to this end I submitted the following draft of a bill to accomplish the object desired:

> *Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That the Secretary of War may cause to be sold at public sale, under regulations to be prescribed by him, such subsistence stores in good condition intended for issue or for sales to officers and enlisted men as may from time to time accumulate at any subsistence depot, military post, or in the field, in excess of amounts required for use and which can not, with economy and advantage, be shipped to other subsistence depots, posts, or places for military use, the proceeds to be immediately available for general disbursement, under the appropriation for subsistence of the Army current at the time of sale, for any of the objects contemplated by that appropriation.

A copy of the above letter was sent to the chairman of the Committee on Military Affairs, House of Representatives, by the Secretary of War on April 6, 1900, recommending the favorable consideration thereof by Congress. On April 9, 1900, a bill (H. R. 10565, Fifty-sixth Congress, first session) was introduced and referred to the Committee on Military Affairs and ordered to be printed, as follows:

A BILL authorizing the disposing of subsistence stores.

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That the Secretary of War may cause to be sold at public sale, under regulations to be prescribed by him, such subsistence stores in good condition intended for issue or for sale to officers and enlisted men as from time to time accumulate at any subsistence depot, military post, or in the field in excess of amounts required for use and which can not, with economy and advantage, be shipped to other subsistence depots, posts, or places for military use, the proceeds to be immediately turned into the Treasury of the United States.

On April 14, 1900, this office addressed the chairman of the Military Committee, House of Representatives, with the view of having the bill amended before being reported to the House, by substituting these words of the original draft, viz, "the proceeds to be immediately available for general disbursement under the appropriation for subsistence of the Army current at the time of sale, for any of the objects contemplated by that appropriation," in place of the words, "the proceeds to be immediately turned into the Treasury of the United States," as reported in the bill.

This office also impressed upon the chairman the necessity, in view of the perishability of subsistence stores, for early legislation, it being now held that an act of Congress is necessary to authorize the sale of any property of the United States, and there being nothing on the statute books authorizing sales of accidental accumulations of the kind covered by bill No. 10565.

It is requested that the Secretary of War urge Congress to pass the bill in the amended form as recommended by this office.

### GARRISON AND FIELD BAKE OVENS, KITCHEN AND MESS-HALL FURNITURE, AND THE INDIVIDUAL MESS FURNITURE OF THE SOLDIER.

In the annual report of the Commissary-General of Subsistence for the year 1898 he stated that an item had been introduced in the annual estimate for the fiscal year 1900 tending toward the restoration to the Subsistence Department from the Quartermaster's Department of the building, altering, and repairing of bake ovens constructed in the bake-houses at the garrisoned posts and in the field, and furnishing the utensils for use with the same; also authorizing the purchase by the Subsistence Department of portable bake ovens for use of troops in the field and the utensils connected with the operation of the same. The matter was again referred to in the annual estimate for the subsistence of the Army for the fiscal year 1901, and is also included in the estimate for 1902, along with the duty of furnishing kitchen and mess-hall furniture and the individual mess furniture of the enlisted men in the field, now provided by the Quartermaster and Ordnance Departments. The Secretary of War has, under section 219, Revised Statutes, authority to make such distribution of duties between the Quartermaster and Subsistence Departments as he deems best for the interests of the service. The Subsistence Department is charged with the duty of providing the food supplies for the Army, and should be given the means to enable it to thoroughly perform such duty in order that responsibility for failure can be definitely fixed. At present the cooperation of three separate supply departments is required in getting food to the troops in the field.

The Dodge Commission, appointed by the President to investigate the conduct of the War Department in the war with Spain, reported (Vol. I, p. 148) as follows:

> Finally. In the opinion of this commission, there should be a division of the labor now devolving upon the Quartermaster's Department.

The following testimony was given before said commission by an officer of the Inspector-General's Department whose duties qualify him to speak intelligently on the subject:

> As nearly as I can recollect, there never has been any deficiency, since I have been in command of the division, in subsistence stores. There has been some complaint, however, as, for instance, that the bread was sour or the beef tainted, but these were only temporary defects, which were immediately corrected, and I think in most of the cases the meat and bread rejected were replaced. There is one point in considering complaints in regard to rations which I think I ought to bring to the notice of the commission. Three different departments are concerned in furnishing the soldier his ration; that is, before he is able to eat it, the cooperation of three departments. For example, the commissary buys the rations and turns them over to the quartermaster for transportation and distribution, and the Ordnance Department provides the knives, forks and spoons, canteens, tin cups, and haversacks which comprise the field mess kit. A majority of the complaints which came from the First South Carolina Volunteers about rations were charged to the Commissary Department, but there was no shortage of food, and the complaints resulted from the fact that the regiment did not receive its mess kits until just before it left Chickamauga Park. Previous to this they had to eat with their fingers, or from such dishes as they could improvise from old tomato cans, etc. So in investigating complaints about rations you must look and see which department is really responsible. This illustrates in the most pointed way the complex system of supply in our Army. Why one department should not provide the supplies and issue them, in view of all the necessities of the Army, I have not been able to see. It is an old question and possibly will never be answered, but I don't see why we should not have an answer which will satisfy any intelligent inquirer. We never have had it yet, but I do not see why there should not be one supply department acting in view of all the necessities of the service. But, as I say, it is an old question.
>
> By Colonel Sexton:
>
> Q. One of the volunteer officers says, "We get a coffee mill from one department and a coffee roaster from another."
>
> A. I think all the coffee mills and roasters are furnished by the Quartermaster's Department; but our system is most complex. You can see exactly how complex a question arises. Of course the quartermaster is in charge of the transportation, but the Quartermaster's Department has more articles of its own to transport than any other supply department of the Army. The commissary applies to the quartermaster for transportation. The quartermaster has his own supplies to transport, and it is a question, when the means of transportation are limited, whether he will bring up a lot of rations belonging to the Subsistence Department or clothing which belongs to him. If you were the quartermaster you would probably look after the transportation of your own supplies first. I call attention to this point because I think that unless we are able to understand it we may not always be fair in our criticisms.

It is hoped that Congress will so phrase the appropriation for subsistence of the Army as to place funds at the disposal of the Subsistence Department for the purposes above expressed, and as expressed in the annual estimate, and so that with funds available in that Department, the Secretary of War will be able to make the transfer of duties from the Quartermaster to the Subsistence Department under the authority which section 219, Revised Statutes, confers upon him.

### ARMY BAKERS.

The first step taken by my predecessors in recommending legislation for the enlistment of bakers for the military service was in the year 1877, when the Commissary-General recommended that "bakers should be specially enlisted, paid extra pay—say, $4 per month—and assigned to posts as are commissary sergeants," and that, in the event of the establishment of schools for cooks at recruiting depots, "bakers should also be instructed at the same schools." This recommendation was renewed in the annual reports for 1879, 1880, 1881, 1883, 1884, 1885, 1886, 1888, 1889, 1890, 1891, and 1892. In 1895 the Commissary-General, in citing the foregoing recommendations, again brought the matter to the attention of the Secretary of War for the purpose of having him urge upon Congress the desirability of passing the necessary laws for the enlistment and payment of bakers needed for the service, stating that at posts at which general messes are to be established or maintained there should be one baker at $30 per month and assistant baker at $18 per month, with additional assistant bakers at $18 per month, not exceeding one for every 200 rations of bread baked per day in excess of 300. He also recommended that a special allowance to the bakery for the necessary fuel and lights be established by regulations, and stated that the action recommended would produce the best results from the ration; no part of the flour issued to the soldier would be taken from him, and the detail of soldiers away from their legitimate duties would be to this extent prevented.

The above recommendation was renewed in the annual report of the Commissary-General of Subsistence for 1896. It is again urgently recommended that legislation be had upon this subject.

To properly subsist the troops when in the field means of furnishing them fresh bread should be provided. In order to do this, a field bakery column, modeled upon those now authorized in all foreign armies, should be organized, and trained bakers should be provided.

### TRAINING SCHOOL FOR ARMY COOKS.

As army cooks were authorized by act of Congress, approved July 7, 1898, for the Regular and Volunteer armies of the United States, particularly for managing, cooking, and serving the ration in the field, it is now urgently recommended that a training school for cooks be established at one of the large military posts in this country. Such school could supply the cooks and bakers required in the various organizations and for the proposed field-bakery column.

### ICE IN THE TROPICS.

On May 9, 1899, the Secretary of War authorized the daily issue during the fiscal year ending June 30, 1900, of 100 pounds of ice to each company, troop, or battery stationed in the island possessions, when it could be purchased, and a proportional part thereof, not less than 50 pounds for each detachment to which rations were issued, except civilian employees and sick in hospital. This authority was extended by the Secretary of War on June 23, 1900, to cover the fiscal year 1901, with the understanding that no savings be allowed to be made on same.

In the annual estimate for the subsistence of the Army for the fiscal year ending June 30, 1902, an item is inserted for the purchase of 100 pounds of ice (at 30 cents per 100 pounds) per day for each company, troop, or battery stationed in our insular possessions where ice can be furnished. This ice is required to cool drinking water, which must be boiled for sanitary reasons.

### TOILET PAPER.

On February 9, 1900, the Secretary of War approved the purchase by this Department of toilet paper at such military posts and camps at which troops are stationed as are provided with modern water-closets; and in accordance therewith the following was promulgated in General Orders, No. 22, Headquarters of the Army, February 24, 1900:

> Toilet paper, as an article of issue, will be furnished by the Subsistence Department until June 30, 1900, for the use of the enlisted men stationed at such military posts and camps as are provided with modern water-closets with sewer connections.
>
> Issues at such posts and camps will be made upon special requisitions of the commanding officers of organizations, approved by commanding officers of posts and camps, at the rate of one package of 1,000 sheets for each two enlisted men per month.

Based upon reports received from various officers, in favor of the continuance of the issue of toilet paper on the ground that a great economy had resulted on account of the prevention of stoppage in the closets, this office on June 30, 1900, recommended a continuance of the issue. The authority for the continuance was promulgated to the Army in General Orders, No. 91, Headquarters of the Army, July 9, 1900.

### EFFICIENCY OF THE SUBSISTENCE DEPARTMENT.

On February 6, 1900, I addressed the following communication to the Secretary of War with regard to the passage of an act to increase the efficiency of the Subsistence Department:

> I had occasion in my annual report of October 1, 1899, to suggest that prudence required that the paucity in the number of officers of the Subsistence Department for meeting the demands made on that Department should be brought under the inspection of Congress. Since that time the necessity of measures to relieve the stress has become imperative, and I therefore respectfully urge the honorable the Secretary of War to bring the matter to the attention of Congress, with the view of passing at as early a date as possible an act to increase the efficiency of the Subsistence Department. The legislation I propose is embodied in the following draft of a bill, viz:
>
> "*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled*, That hereafter the Subsistence Department of the Army shall consist of one Commissary-General of Subsistence, with rank, pay, and emoluments of brigadier-general as now allowed by law; three assistant commissaries-general of subsistence, with the rank, pay, and emoluments of colonel of cavalry, instead of the two now allowed by law of said grade; six assistant commissaries-general of subsistence, with the rank, pay, and emoluments of lieutenant-colonel of cavalry, instead of the three now allowed by law of said grade; twelve commissaries of subsistence, with the rank, pay, and emoluments of major of cavalry, instead of the eight now allowed by law of said grade; forty commissaries of subsistence, with the rank, pay, and emoluments of captain of cavalry: *Provided*, That the additional officers above the grade of captain shall be filled by promotion, according to seniority, of the officers in the Subsistence Department of the Regular Army: *Provided further*, That five of the vacancies among the number of the captains and commissaries of subsistence created by this section shall be filled by selection from the post commissary-sergeants of the Army now in the service."
>
> In order that the wants of the Department may be clearly perceived, the following

table of the stations and duties of the regular and volunteer officers of the Department is given, which shows also the stations which are filled by details from other branches of the service.

| Stations. | Duties. | Number of Subsistence Officers at stations. | |
|---|---|---|---|
| | | Regular. | Volunteer. |
| Washington, D. C | Acting Commissary-General of Subsistence. | 1 colonel | |
| | Assistant | 1 lieutenant-colonel. | |
| | Assistant | 1 major | |
| New York, N. Y | Chief and purchasing commissary | 1 colonel | |
| | Assistant | 1 captain | |
| Chicago, Ill | Chief and purchasing commissary | 1 major | |
| San Francisco, Cal | Purchasing commissary | 1 major | |
| | Assistant | | 1 major (is also chief commissary). |
| | Assistant | | 1 major. |
| St. Louis, Mo | Purchasing commissary | 1 lieutenant-colonel. | |
| Boston, Mass | Purchasing commissary | 1 major | |
| Vancouver Barracks, Wash | Chief and purchasing commissary | 1 major | |
| Porto Rico | Chief and purchasing commissary | 1 lieutenant-colonel. | |
| Cuba | Chief commissary, Division of Cuba | | 1 major. |
| | Chief commissary, Matanzas | 1 captain | |
| | Chief commissary, Santiago | | 1 captain. |
| | Chief commissary, Department of Habana. | | 1 captain. |
| | Depot commissary, Habana | | 1 captain. |
| | Depot commissary, Nuevitas | | 1 captain. |
| Philippines | Chief commissary, Department of Pacific. | 1 major | |
| | Chief commissary, division | 1 major | 1 major. |
| | Various duties | 2 captains | 1 major, 8 captains. |
| Omaha, Nebr | Chief and purchasing commissary | 1 captain | |
| St. Paul, Minn | Chief and purchasing commissary | | Detail. |
| Denver, Colo | Chief and purchasing commissary | | Detail. |
| San Antonio, Tex | Chief commissary | | Detail. |
| New Orleans, La | Purchasing commissary | | Detail. |
| Hawaii | Depot commissary | | Detail. |
| Alaska | Chief commissary | | Detail. |
| Transport service | Transport commissary | | 1 captain. |
| Other stations, etc | Commissary-General (suspended) | 1 brigadier-general. | |
| | Collector customs, Habana | 1 major | |
| | Colonel Thirty-ninth Infantry | 1 captain | |
| | Unassigned (recently appointed) | | 1 captain. |
| | En route from Philippines | | 1 major. |
| | Total | 20 | 20 |

To give necessary efficiency to the Department, the following additional officers are needed at the places mentioned:

| | |
|---|---|
| Washington, D. C., Office of the Commissary-General of Subsistence | 1 |
| New York City, purchasing commissary, assistant | 1 |
| New York City, chief commissary | 1 |
| Chicago, Ill., purchasing commissary, assistant | 1 |
| Chicago, Ill., chief commissary | 1 |
| San Francisco, Cal., chief commissary | 1 |
| St. Paul, Minn., chief and purchasing commissary | 1 |
| Denver, Colo., chief and purchasing commissary | 1 |
| San Antonio, Tex., chief and purchasing commissary | 1 |
| New Orleans, La., purchasing commissary | 1 |
| Hawaii, depot commissary | 1 |
| Alaska, chief commissary | 1 |
| Transport service | 10 |
| Total | 22 |

In the matter of the rank of the officers in the rearrangement proposed, I beg to say that the measure involves the addition of the grades of 1 colonel, 3 lieutenant-colonels, and 4 majors, to be filled by promotions within the present regular establishment, and the addition of 32 captaincies, to be filled by original appointment, the total strength of the Department being increased to 62 officers as against the 22 now on the regular roster, it being contemplated to dispense with all service under volunteer commissions in the Subsistence Department.

The need of officers of high rank is illustrated in the case of the chief commissaryships in the Philippines and in Cuba, where the positions are held by officers of the grade of major only—one being of the regular establishment and the other of the volunteers. So of the chief commissaryships and principal purchasing commissaries at Chicago and San Francisco, where the chief and purchasing commissaries are both of the grade of major only, the chief commissary at San Francisco being of the volunteers and an assistant to the purchasing commissary at the same time. At the headquarters of the Department of the Pacific in the Philippines, the adjutant-general is of the rank of colonel; the inspector-general is of the rank of lieutenant-colonel; the chief surgeon, colonel; the chief paymaster, lieutenant-colonel; the ordnance officer, lieutenant-colonel; and the signal officer, lieutenant-colonel. At the headquarters of the Division of Cuba the adjutant-general is of the rank of lieutenant-colonel; inspector-general, colonel; chief surgeon, lieutenant-colonel; signal officer, colonel. The chief quartermaster in Chicago is of the rank of colonel; the chief quartermaster in San Francisco, lieutenant-colonel. It is true that the rank of officers holding these important positions in other supply departments may be changed at any time by a new assignment, but the general level of rank shown by this recital is established for other staff departments, and there should be positions provided in the Subsistence Department to permit the assignment of officers of equal rank to places requiring coordinate service. There should be an increase of a sufficient number of captains to furnish one for duty as transport commissary on each vessel of the army transport service.

It is considered that the foregoing rearrangement and additions are necessary to the efficiency of the department under existing condition and until the reorganization of the Army which seems to be in contemplation on July 1, 1901. With the wide dispersion of the Army that must continue after that date, it can not be now seen that the Subsistence Department can suffer any reduction from the number now asked for.

I have the honor, therefore, to request that a copy of this communication be forwarded to the President of the Senate and the Speaker of the House, if the measure proposed meets your approval, with the earnest request that legislation be obtained at the earliest date possible in the line of the suggestions herein contained.

Again on February 13, 1900, I addressed the Secretary of War as follows:

In 1895, during the administration of Mr. Lamont, four officers were taken away from the Subsistence Department—that is, the Department was reduced from 26 to 22. Of these 22 officers, there are now 1 suspended; 1 a collector of customs at Habana; 1 a colonel of a regiment, and another who probably will not be available for duty for a long time, thus leaving the Department practically with 8 officers less in the regular establishment than it had in 1895 when the reduction took place and the Army was but 25,000 men.

The condition of the Department to-day is that we have no chief commissary at Governors Island, a department that has 47 posts, nor have we an assistant to the purchasing officer in New York City, where the purchases are indeed exceptionally large; nor have we at Chicago a chief commissary for the Department of the Lakes, where there are 5 posts, and where the purchasing conditions are similar to those in New York City. We have no commissary whatever at the depot at New Orleans, none at St. Paul, for the department and depot; none at Omaha, Denver, San Antonio, and one too few at the depot in San Francisco. Because of this state of affairs it is asked that the Department be increased to the number it was before the reduction made by Secretary Lamont in 1895; and in view of the conditions hereinbefore pointed out, consideration be given to the necessity for additional numbers and instead of giving us the four officers to put us back to where we were in 1895, that we get eight to immediately meet the conditions pointed out above, and remove the tension which now exists in the Department.

A copy of the following bill was handed the Adjutant-General of the Army February 21, 1900:

A BILL to increase the efficiency of the Subsistence Department of the Army.

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That there are hereby added to the Subsistence Department of the Army one assistant commissary-general of subsistence with the rank of colonel of cavalry; one assistant commissary-general of subsistence with the rank of lieutenant-colonel of cavalry; two commissaries of subsistence with the rank of major of cavalry; and four commissaries of subsistence with the rank of captain of cavalry. The positions above the grade of captain hereby created shall be filled by regular promotion, according to seniority, of the present officers in the Subsistence Department of the Regular Army, the eight resulting vacancies in the grade of captain being filled by appointment from the line under existing laws.

This last communication was sent by the Secretary of War on February 28, 1890, to the chairman of the Military Committee, House of Representatives, as follows:

> I have the honor to transmit herewith a bill to increase the number of officers in the Subsistence Department of the Regular Army. The number of officers in this Department is not sufficient to meet the demands of the service and to insure the purchase and prompt supplying involved in subsisting the Army as now employed. Favorable action is requested.

and was accompanied by the following memorandum prepared by me:

> The condition of affairs as pointed out in my letter to the Secretary is spoken of in the minimum. I hardly know how to meet the wants of the Department with the tools with which I have to work. The total cost of the increase per annum would be about $18,000, and this would be repaid to the Government, I may say, five times over in freight alone, without referring to the quality of goods incident to hurried purchase. For instance: if I had an officer at Kansas City, I could ship stores from there to many posts in Texas, Indian Territory, and Kansas, whereas I now have to ship them from elsewhere. Again, the bacon that I send out from Kansas City for San Francisco, I have to send Major Alexander from Chicago to Kansas City, for the purpose of inspection, about twice a month. This is just a fair sample, and since there is not one thing in the whole of this that can accrue to my personal benefit, or to the benefit of anybody but the Government, I beg of you to take a special interest in it.
>
> The increase of colonel and lieutenant-colonel is necessary; it is due to the fact that an officer holding the position of chief commissary at New York or Chicago should have equal rank to men holding corresponding positions. Again, he needs the authority incident to rank; it is due to a proper incentive for promotion; it is also due to the opportunity it will give a few officers who served during the war, now well up on the list, to pass to a higher grade; it is due to a homogeneous organization.

On March 5, 1900, the following bill (H. R. 9150) was introduced in the House of Representatives and referred to the Committee on Military Affairs and ordered to be printed:

A BILL to increase the efficiency of the Subsistence Department of the Army.

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That there shall be added to the Subsistance Department of the Army one assistant commissary-general of subsistence with the rank of colonel, one assistant commissary-general of subsistence with the rank of lieutenant-colonel, and four commissaries of subsistence with the rank of captain.

On March 21, 1900, it was reported with amendments, committed to the Committee of the Whole House on the state of the Union, and ordered to be printed, as follows:

A BILL to increase the efficiency of the Subsistence Department of the Army.

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That there shall be added to the Subsistence Department of the Army one assistant commissary-general of subsistence with the rank of lieutenant-colonel, and five commissaries of subsistence with the rank of captain.

As amended, the committee recommended the passage of the bill.

A similar communication to above was sent to the chairman of the Committee on Military Affairs, United States Senate, on the 28th of February, 1900, by the Secretary of War, accompanied by letter of the Acting Commissary-General of Subsistence, dated February 13, 1900, and memorandum of March 1, 1900, as above, together with the following note by me:

One of the most important reasons for a sufficient number of commissary officers is the necessity and economy of being able to buy and inspect supplies at the most advantageous points. The number of officers in the Subsistence Department at present is so small that it is impossible to detail an officer for duty at Kansas City. Consequently, commissary supplies going to New Mexico, Arizona, Texas, and far western points are purchased at Chicago and billed from there instead of Kansas City, at a loss to the Government in the payment of freight, as shown in the following table of freight rates. The saving in freight rates by having a man stationed at Kansas City would, in a very short time, pay his salary several times over. Kansas City is only one of several points where a great saving could be made to the Government, providing a sufficient number of commissaries are provided for such detail.

| | First class. | Second class. | Third class. | Fourth class. | Remarks. |
|---|---|---|---|---|---|
| Fort Leavenworth: | | | | | |
| Chicago | $0.80 | $0.65 | $0.45 | $0.32 | |
| Kansas City | .18 | .15 | .13 | .10 | |
| | .62 | .50 | .32 | .22 | In favor of Kansas City. |
| Fort Riley: | | | | | |
| Chicago | 1.30 | 1.10¼ | .82 | .60 | |
| Kansas City | .50 | .45¼ | .37 | .28 | |
| | .80 | .65 | .45 | .32 | Do. |
| Fort Sill: | | | | | |
| Chicago | 1.40 | 1.33 | 1.07 | .95 | |
| Kansas City | 1.10 | .99 | .89 | .77 | |
| | .40 | .34 | .18 | .18 | Do. |
| Fort Reno: | | | | | |
| Chicago | 1.50 | 1.29 | 1.07 | .89 | |
| Kansas City | .86 | .76 | .67 | .57 | |
| | .64 | .53 | .40 | .32 | Do. |

New Mexico, Arizona, and Texas points: Difference on rate from 10 to 20 cents in favor of Kansas City.

On March 2, 1900, the following bill (S. 3430) was introduced by Mr. Hawley, read twice, and referred to the Committee on Military Affairs:

A BILL to increase the efficiency of the Subsistence Department of the United States Army.

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That there shall be added to the Subsistence Department of the Army one assistant commissary-general of subsistence with the rank of colonel, one assistant commissary-general of subsistence with the rank of lieutenant-colonel, and four commissaries of subsistence with the rank of captain.

On March 26, 1900, it was reported by the committee to the Senate without amendment, and passed April 5, 1900. The bill was then sent to the House of Representatives and referred to the Committee on Military Affairs April 9, 1900.

On April 25, 1900, it was reported with an amendment, committed to the Committee of the Whole House on the state of the Union, and ordered to be printed, as follows:

AN ACT to increase the efficiency of the Subsistence Department of the United States Army.

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That there shall be added to the Subsistence Department of the Army one assistant commissary-general of subsistence with the rank of lieutenant-colonel, and five commissaries of subsistence with the rank of captain.

On account of the early closing thereafter of the first session of the Fifty-sixth Congress no further action was taken.

There is no improvement in the condition of the Department over that reported on February 13, 1900, matters being infinitely more unsatisfactory. Since that date one captain has died and his place has been filled by an officer at present inexperienced in subsistence duties; another captain has become incapacitated by disease, necessitating medical treatment which, if not successful, will result in his retirement; another captain who had brief service in the Philippine Islands is incapacitated by reason of sickness, and it is not known when he will be returned to duty. Thus it will be seen that this department is considerably handicapped in the performance of its duties by the smallness of the number of its officers. The trouble in China called for the sending, if possible, to that country of experienced officers to look out for the interests of the Subsistence Department, but the only officers available for such important duties were one volunteer and one of the regular establishment (recently appointed, and who was inexperienced in subsistence duties), and they were accordingly so assigned. It is a matter much to be regretted that the regular establishment of the Subsistence Department is not larger. The need of more officers experienced in the duties of this Department has been greatly felt since the breaking out of the war with Spain, and so long as the Army remains at a strength beyond the peace footing of 1895, viz, 25,000 men, the Subsistence Department should unquestionably be increased in numbers.

In view of this condition of affairs, it is hoped that the Secretary of War will urge Congress at its next session to adopt the bill which passed the Senate on the 5th of April, 1900.

### PRINCIPAL PURCHASING DEPOTS OF THE SUBSISTENCE DEPARTMENT.

Col. C. A. Woodruff, assistant commissary-general of subsistence, was the purchasing and depot commissary at New York City from the date of the last annual report to June 1, 1900, when he was relieved by Capt. John Little, commissary of subsistence, United States Army, and ordered to duty in the Philippine Islands. New York City was and is one of the principal purchasing stations in the department. The purchase and shipment of the immense quantities of subsistence supplies from this point were admirably conducted by Colonel Woodruff, who is entitled to great credit for the performance of the important duties devolving upon him. He also managed the transport service with perfect satisfaction.

Maj. William H. Baldwin, commissary of subsistence, was the purchasing and depot commissary at San Francisco, Cal., during the year, and through his excellent management, good judgment, ability, fidelity, and zeal, and his constant devotion to duty, he supplied with alacrity subsistence stores of the best quality to the Philippines, Hawaii, the relief expedition to China and Alaska, and his management of the transport service was perfection. Major Baldwin's services to the department and in providing for our army in the Philippines and in China are invaluable, and great credit is due him for the satisfactory manner in which he has performed his duty.

Maj. George B. Davis, commissary of subsistence, United States Volunteers, was the purchasing and depot commissary at Chicago, Ill., from July 2, 1899, to October 2, 1899, when he was relieved by Maj. W. L. Alexander, commissary of subsistence, and ordered to duty in the Philippine Islands. This station is a very important one, and the duties devolving upon the subsistence officers, Majors Davis and Alexander, were performed in a very able and creditable manner.

Among the regular officers who have performed duty as volunteers in the Subsistence Department who merit praise for the satisfactory performance of the duties devolving upon them may be mentioned Maj. Hugh J. Gallagher, as chief commissary Department of California, San Francisco, Cal., and chief commissary of the China relief expedition at Taku, China; Maj. Oliver E. Wood, as chief commissary Division of Cuba, and purchasing commissary at Habana, Cuba, and as chief commissary Department of California; Maj. George W. Ruthers, as assistant to the purchasing commissary San Francisco, Cal., and in charge of the transport branch of the service, under the direct supervision of Major Baldwin, commissary of subsistence.

Among the volunteer commissaries who have performed duty in the Subsistence Department, who are entitled to much credit, may be mentioned Capt. S. B. Bootes, as issuing commissary of First Division, Eighth Army Corps, as issuing and shipping commissary at Malolos, in charge of issues of subsistence to Spanish prisoners of war, as depot commissary at Iloilo, and as chief commissary Department of the Visayas, P. I.; Capt. S. M. Milliken as issuing commissary First Division, Eighth Army Corps, P. I.; Capt. Theo. B. Hacker as acting chief commissary Department of the Pacific and Eighth Army Corps, as chief commissary Department of Northern Luzon, as chief commissary Department of Mindanao and Jolo, and as depot commissary at Zamboanga, P. I.

In addition to the above it can be said that, with a single exception among the volunteer commissaries of the department, all have rendered efficient and satisfactory service.

## COMMISSARY SERGEANTS.

The number of commissary sergeants in service at the beginning of the fiscal year was 161. During the year 29 were appointed, 7 were discharged, 1 declined reenlistment, 11 were retired, and 4 died, leaving 167 in the service at the end of the year. By General Orders, No. 17, Headquarters of the Army, February 16, 1900, the Secretary of War authorized the increase of the number of commissary sergeants from 100 to 165, and by General Orders, No. 59, Headquarters of the Army, April 30, 1900, the Secretary of War authorized a still further increase of the number to 200. This increase was brought about by the necessity for an increased number required in the Philippine Islands. Examinations under Army Regulations 91 have been and are being held in the Philippine Islands to establish a list of eligibles, and appointments are being made of such men as are found eligible as fast as the papers are received.

This class of noncommissioned officers are very competent men. They are thoroughly informed in their duties, and it is urgently recommended that when volunteer regiments are formed and volunteer regimental commissaries are required, as well as appointments in the volunteer staff corps in time of war, these vacancies be filled by the selection from among the list of commissary-sergeants. In this way the volunteer regiments will have assigned to them men who are thoroughly competent to do the work of the Subsistence Department and who will be able to better provide for the sustenance of the men, thus tending to promote the health of the commands and increase the effectiveness of the same.

### REGIMENTAL COMMISSARIES AND REGIMENTAL COMMISSARY-SERGEANTS.

By act of Congress approved March 2, 1899, a regimental commissary, with rank of first lieutenant, and a regimental commissary-sergeant were authorized for each regiment of infantry and cavalry. Such organizations now number from 1,200 to 1,400 men, and it is only a matter of prudence to have an officer and one noncommissioned officer to assist him, whose special duty it is to provide for such a large number, particularly in the field, when the regimental officers are always fully occupied with their ordinary duties, and so many of them are liable to be absent, either sick or engaged upon other important duty. The fact of there being so little complaint of inadequacy of food supplies with the troops in the field is, in my opinion, largely due to the fact that these officers and noncommissioned officers are now provided to look after such matters. No regimental organization is complete without such officers, and it is urgently recommended that they be continued. It is also further recommended that a battalion commissary, with rank of first lieutenant, and a battalion commissary-sergant be provided for each battalion of field artillery and for regiments of artillery when serving as infantry.

### CLERICAL WORK, OFFICE COMMISSARY-GENERAL OF SUBSISTENCE.

Statement of accounts current and returns on hand June 30, 1899, received and examined during fiscal year ending June 30, 1900, and on hand at close of same awaiting examination:

| | Accounts current. | Returns of stores. | Returns of property. | Total. |
|---|---|---|---|---|
| On hand June 30, 1899 | 338 | 1,165 | 237 | 1,740 |
| Received during fiscal year 1900 | 5,121 | 3,812 | 1,418 | 10,351 |
| Total | 5,459 | 4,977 | 1,655 | 12,091 |
| Examined during year | 5,272 | 4,818 | 1,628 | 11,718 |
| On hand June 30, 1900 | 187 | 159 | 27 | 373 |

The examination of the accounts current required the verification of 75,908 vouchers, the returns of subsistence stores 57,032, and the returns of subsistence property 6,510 vouchers.

In connection with the examinations 7,289 postal cards were used, and 6,675 letters and 9,726 indorsements were written and recorded.

Contracts for supplies, etc., to the number of 720 were received and acted on.

Certificates of services as acting commissary of subsistence were issued to the number of 502, and of nonindebtedness to the number of 2,158.

Number of claims on hand received and disposed of during the fiscal year ending June 30, 1900:

| | Claims for commutation of rations— While held as prisoner of war in rebel States. | Claims for commutation of rations— While on furlough, and miscellaneous claims. | Total. |
|---|---|---|---|
| On hand June 30, 1899 | 68 | 1,657 | 1,725 |
| Received during the fiscal year 1900 | 168 | 811 | 979 |
| Total | 236 | 2,468 | 2,704 |
| Disposed of during the fiscal year 1900 | 233 | 2,460 | 2,693 |
| On hand June 30, 1900 | 3 | 8 | 11 |

The number of letters, indorsements, and postal cards written during the year in connection with the above claims was 6,091.

### CLERICAL FORCE, OFFICE COMMISSARY-GENERAL OF SUBSISTENCE.

The force of 32 clerks has been increased from time to time since May, 1898, by various acts of Congress authorizing the employment of temporary clerks, of which class there are now 37 paid on the temporary roll. I take the opportunity which this annual report affords of urgently pressing upon the attention of superior authority the justness and reasonableness of a rearrangement of the salaries of the clerical force of this Bureau. With the permanent increase of the Regular Army and the continuance of the Volunteer Army in service the clerical work in this Bureau has been increased in volume and importance. The clerical force, in my opinion, should be graded in accordance with those equitable principles which are to be observed in the arrangement of salaries for other bureaus and departments of the Government. I have, therefore, in submitting the estimate for the clerical force for the fiscal year ending June 30, 1902, asked for a moderate increase of grades of the regular force and have submitted proper items for these increased grades in the estimate. I hope the proposed rearrangement will meet the approval of the Secretary of War and be favorably acted upon by Congress. In connection with the subject of the clerical work of the Bureau I beg to say that from April, 1898, to January 31, 1899, it was found necessary to keep a part of the clerical force on duty beyond office hours. The extra work was cheerfully performed, and it is thought that extra compensation should be paid for the extra work. It is hoped that the Secretary of War will give the matter his favorable consideration.

### OFFICERS OF THE SUBSISTENCE DEPARTMENT.

The subjoined list shows the officers of the Subsistence Department and their duties on October 1, 1900.

Respectfully submitted.

J. F. Weston,
*Acting Commissary-General of Subsistence.*

The honorable the Secretary of War.

*Roster of the Subsistence Department, United States Army, October 1, 1900.*

## CASUALTIES IN THE SUBSISTENCE DEPARTMENT SINCE JULY 1, 1899.—RETIREMENTS, DISCHARGES, DISMISSALS, AND DEATHS.

Maj. Oskaloosa M. Smith, commissary of subsistence, retired February 12, 1900, per Special Order 37, Headquarters of the Army, February 13, 1900.

Maj. Robert H. Fitzhugh, commissary of subsistence of volunteers, honorably discharged to date October 31, 1899, per Special Order 238, Headquarters of the Army, October 12, 1899.

Capt. Joseph B. Handy, commissary of subsistence of volunteers, honorably discharged to date October 31, 1899, per Special Order 237, Headquarters of the Army, October 11, 1899.

Capt. Daniel Van Voorhis, commissary of subsistence of volunteers, honorably discharged to date October 31, 1899, per Special Order 243, Headquarters of the Army, October 19, 1899.

Capt. William H. Anderson, commissary of subsistence of volunteers, honorably discharged to date November 15, 1899, per Special Order 260, Headquarters of the Army, November 7, 1899.

Capt. C. Dupont Coudert, commissary of subsistence of volunteers, honorably discharged to date November 25, 1899, per Special Order 252, Headquarters of the Army, October 28, 1899.

Capt. John Landstreet, jr., commissary of subsistence of volunteers, honorably discharged to date December 31, 1899, per Special Order 286, Headquarters of the Army, December 9, 1899.

Capt. Edward R. Hutchins, commissary of subsistence of volunteers, honorably discharged to date April 22, 1900, per Special Order 86, Headquarters of the Army, April 12, 1900.

Capt. James A. Logan, jr., commissary of subsistence of volunteers, honorably discharged to date May 15, 1900, per Special Order 101, Headquarters of the Army, April 30, 1900.

Capt. Peter C. Deming, acting commissary of subsistence of volunteers, dismissed the service to date June 12, 1900, by sentence of general court marshal, per General Order 80, Headquarters of the Army, June 8, 1900.

Capt. John Little, commissary of subsistence, United States Army, died of typhoid fever at Governors Island, New York Harbor, N. Y., July 28, 1900, and was buried at Westpoint, N. Y. Capt. Little performed valuable service during the war with Spain in supplying the troops with an abundance of good and wholesome food, and his loss to the Subsistence Department is great.

Capt. Seth M. Milliken, acting commissary of subsistence of volunteers, honorably discharged to date August 25, 1900, per Special Order 191, Headquarters of the Army, August 15, 1900.

# REPORT OF THE SURGEON-GENERAL.

# REPORT

OF

# THE SURGEON-GENERAL.

---

**War Department,**
**Surgeon-General's Office,**
*Washington, D. C., October 17, 1900.*

Sir: In submitting a report of my administration of the duties of this office during the past year, I have the honor, first, to invite attention to a statement of the financial transactions for the year ended June 30, 1900.

## FINANCIAL STATEMENT, 1900.[1]

### *Medical and hospital department, 1900.*

| | | |
|---|---|---|
| Appropriated by act approved March 3, 1899 | $1,500,000.00 | |
| Transferred from appropriation "Medical and hospital department, 1899," by act approved February 9, 1900 | 500,000.00 | |
| | | $2,000,000.00 |
| Gain on exchange of funds to insular possessions | 12.50 | |
| Refunded during the year (including transfer settlements by Treasury Department to adjust appropriations, $12) | 424.54 | |
| | | 437.04 |
| Total to be accounted for | | 2,000,437.04 |
| Disbursed during the year:[2] | | |
| Expenses of medical supply depots | 547.03 | |
| Medical supplies | 1,164,419.72 | |
| Medical attendance and medicines | 13,680.92 | |
| Medical expenses of recruiting | 49,751.04 | |
| Pay of nurses | 124,146.24 | |
| Pay of other employees | 137,286.72 | |
| Washing of hospital linen | 58,005.54 | |
| Expressage on medical property | 948.18 | |
| Exchange on funds to insular possessions | 437.50 | |
| Notarial fees | 30.75 | |
| | | 1,549,253.64 |

---

[1] The disbursements in this statement include settlements with public creditors made by the accounting officers of the Treasury and charged by them to these appropriations.

[2] Disbursements during June and balance June 30, 1900, at Cebu, P. I., have not at this date (October 10, 1900) been accounted for to this office, doubtless because of irregularity of mail communication.

| | | |
|---|---|---|
| Transferred by Treasury settlements to adjust appropriations | | $5,719.51 |
| Balances on hand June 30, 1900: | | |
| In United States Treasury | $337,239.56 | |
| In hands of disbursing officers— | | |

| Disbursed during the year | 8,775.37 |
| Balance on hand June 30, 1900 | 1,224.63 |

### *Library, Surgeon-General's Office, 1899 (act approved March 15, 1898).*

| | |
|---|---|
| Balance July 1, 1899 | $273.36 |
| Disbursed during the year | 273.36 |

### *Furnishing trusses to disabled soldiers (sections 1176, 1177, 1178, Revised Statutes, and act of March 3, 1879).*

| | |
|---|---|
| Expended during the year | $7,798.47 |

## ARTIFICIAL LIMBS AND THEIR COMMUTATION.

Under the laws relating to artificial limbs there were furnished in kind during the year ended June 30, 1900, 292 artificial legs, 9 artificial arms, 2 artificial feet, and 1 apparatus for exsection. Commutation certificates were issued for 2.570 cases of amputated leg, 2,759 of amputated arm, 66 of amputated foot, and for 2,881 cases of the loss of the use of a limb. The sum of $506.595.24 was expended during the year in settling these claims.

The benefits under these laws recur every three years. The claimants who are being paid during the current year ending June 30. 1901. are the survivors of the beneficiaries of the year ended June 30, 1898. The sum of $173.000 was estimated for and appropriated for their benefit. The claims which will be presented for settlement during the year ending June 30, 1902, will be made by the survivors of those who were last paid during the year ended June 30, 1899, when $125,038.91 was disbursed in settlement. Estimates for $125.000 have been submitted for 1902. It was considered injudicious to reduce the estimates below the sum required three years ago, as deaths among disabled veterans of the civil war may to a considerable extent be offset by cases arising as a result of disabilities incurred during the past two years in Cuba, Porto Rico, and the Philippines.

## APPLIANCES FOR DISABLED SOLDIERS.

During the past year the sum of $1,052.50 was expended for 140 appliances issued to disabled soldiers.

## TRUSSES.

The number of trusses issued and fitted during the year was 1,054.

## PROVIDENCE HOSPITAL.

The act of Congress approved June 6, 1900, appropriated $19,000 for the support and medical treatment of destitute patients in the city of Washington, D. C., under a contract to be made with the Providence Hospital by the Surgeon-General of the Army. The amount of relief afforded under this appropriation was as follows:

| | |
|---|---:|
| Patients in hospital July 1, 1899 | 143 |
| Admitted during the year | 1, 349 |
| Total number treated | 1, 492 |
| Average number admitted per month | 124 |
| Number remaining in hospital June 30, 1900 | 135 |
| Total number of days' treatment afforded | 43, 560 |
| Average number of days' treatment per patient | 40 |
| Average number of patients treated per day | 111 |
| Longest term of treatment (days) | 365 |
| Shortest term of treatment (day) | 1 |
| Number of patients in hospital during the whole year | 24 |

## ARMY AND NAVY GENERAL HOSPITAL, HOT SPRINGS, ARK.

*Officers' division.*—Twenty-seven officers were under treatment during the calendar year 1899. Twenty-three were returned to duty, or to their homes, much improved, if on the retired list, after treatment extending over an average period of 64 days; 1 died, and 3 remained in hospital December 31, 1899.

*Enlisted men's division.*—One hundred and eighty cases were admitted during the year, which, with 48 remaining from 1898, make a total of 228 cases treated. One hundred and ten of these were returned to duty, 59 were discharged for disability, 15 by expiration of term of service or special orders, 2 died, and 42 remained under treatment December 31, 1899. Of those discharged on certificates of disability, 26 were cases of rheumatism and 11 of gunshot wounds.

*Division of ex-volunteers.*—Under regulations prescribed by the Surgeon-General of the Army, and approved by the Secretary of War, ex-volunteers of the war of the rebellion have been admitted to this hospital since May 10, 1897, and ex-volunteers of the Spanish-American war since November 9, 1898. During the year ending December 31, 1899, 175 permits were issued to ex-volunteers of both wars. One hundred and thirty cases availed themselves of this permission and were admitted for treatment. The remaining 45 permits were canceled, as the beneficiaries, for various reasons, could not take advantage of them. Most of those who were treated returned to their homes much benefited; 2 veterans of the civil war died in the hospital during the year; 16 cases remained under treatment December 31, 1899.

### THE ARMY MEDICAL MUSEUM AND LIBRARY BUILDING.

This building was originally erected by an appropriation which comprised only 50 per cent of that called for by the estimates. It was, therefore, materially curtailed, not only in its proportions but in its conveniences for the ends in view. The growth of the collections has now reached a point where there is some embarrassment in properly caring for them. This is felt particularly in the library. One large room originally designed for library purposes has been diverted to the uses of the Record and Pension Office of the War Department, and is entirely removed from the control of this office. It is much needed for the display and care of the originals and duplicates of the library property, the latter of which are now so crowded in basement rooms as to be practically inaccessible. I therefore renew the request that the whole of the Museum and Library Building be devoted to its legitimate purpose.

### ARMY MEDICAL MUSEUM.

The total number of specimens in the Army Medical Museum at the end of the fiscal year, June 30, 1900, was 35,420. The following statement shows in detail the additions and changes in the different sections:

| | |
|---|---|
| Pathological section: | |
| In Museum June 30, 1899 | 11,631 |
| Discarded | 17 |
| | 11,614 |
| Received during the year | 263 |
| In Museum June 30, 1900 | 11,877 |
| Anatomical section: | |
| In Museum June 30, 1899 | 1,529 |
| Discarded | 1 |
| | 1,528 |
| Received during the year | 12 |
| In Museum June 30, 1900 | 1,540 |

| | | |
|---|---|---|
| Section of comparative anatomy: | | |
| In Museum June 30, 1899 | | 1,432 |
| In Museum June 30, 1900 | | 1,432 |
| Microscopical section: | | |
| In Museum June 30, 1899 | | 12,750 |
| Added during the year | | 141 |
| In Museum June 30, 1900 | | 12,891 |
| Miscellaneous section: | | |
| In museum June 30, 1899 | | 2,427 |
| Discarded | | 1 |
| | | 2,426 |
| Received during the year | | 68 |
| In museum June 30, 1900 | | 2,494 |
| Provisional pathological section: | | |
| In museum June 30, 1899 | | 2,063 |
| Discarded | 1 | |
| Returned to contributor | 1 | |
| Transferred to other institutions | 3 | |
| | | 5 |
| In museum June 30, 1900 | | 2,058 |
| Provisional anatomical section: | | |
| In museum June 30, 1899 | | 895 |
| Transferred to other institutions | | 139 |
| In museum June 30, 1900 | | 756 |

### RECAPITULATION.

| | |
|---|---|
| Specimens in the museum June 30, 1899 | 35,039 |
| Discarded, transferred, etc | 163 |
| | 34,876 |
| Added during the year | 544 |
| Specimens in museum June 30, 1900 | 35,420 |

The following are some of the more interesting specimens added to the museum collection during the past fiscal year:

11727. Typhoid ulceration of ileum with perforation and peritonitis; from a soldier. Contributed by Acting Asst. Surg. J. J. Curry, U. S. A.

11855–11873. Series of 17 specimens of typhoid fever, and 2 of amœbic dysentery; from soldiers at Fort McPherson, Ga., during Spanish-American War. From post-mortem examinations made by Acting Asst. Surg. R. Norton, U. S. A. One of the fever specimens shows healing, 5 show perforations, 1 was complicated with ulceration of larynx, 1 with parotitis, and 1 with malaria.

11852. Head of an infant showing pseudencephalus. Contributed by Dr. V. B. Jackson, Washington, D. C.

11844–11846. Solitary tubercle of brain of child 9 years old, which had had epileptic fits and died in convulsions. The suprarenal capsules were also tubercular. Contributed by Dr. G. N. Acker, Washington, D. C.

11935–11936. Sarcoma of cerebellum and lung, and tuberculosis of lung, from a woman aged 50, who had also a cancerous breast removed. These conditions were all verified by microscopical examination. Contributed by Dr. D. S. Lamb, Washington, D. C.

11945. Skullcap of boy 5 years old, showing healing after trephining for traumatic epilepsey, which was thereby relieved. The boy was afterwards accidentally killed. Contributed by Acting Asst. Surg. James S. Kennedy, U. S. A.

11726. Aneurism of abdominal aorta which ulcerated and perforated into duodenum; from a soldier who died suddenly. The case was complicated with a malarial spleen, chronic interstitial nephritis, tubercular mesenteric glands, and general arterio-sclerosis. Contributed by Acting Asst. Surg. J. J. Curry, U. S. A.

11812–11813. Aneurism of popliteal artery; femoral artery tied; failure of collateral circulation; gangrene of foot and lower leg, requiring amputation. The colors in the grangenous limb have been beautifully preserved by the Kaiserling method. From an old soldier. Contributed by Maj. L. A. La Garde, surgeon, U. S. A.

11982. Aneurism of arch of aorta which ruptured and caused sudden death. A large pouch opening by a small aperture into the arch. From a soldier. Contributed by Capt. E. A. Mearns, assistant surgeon, U. S. A.

11920–11921. Acute tuberculosis of pericardium and spleen, from a man aged 32. Contributed by Dr. D. S. Lamb, Washington, D. C.

11877–11878. Acute vegetative endocarditis, with chronic pericarditis, and large embolic infarctions of spleen and kidneys; from a woman aged 26. There was a history of rheumatism. Contributed by Dr. D. S. Lamb.

11849–11850. Vegetative endocarditis of both sides, with large embolic infarction of the spleen. From a woman aged 26, who had suffered from rheumatism. Contributed by Dr. H. M. Newman, Washington, D. C.

11853. Cancer of larynx. Contributed by Dr. T. C. Smith, Washington, D. C.

11919. Cancer of œsophagus. Contributed by Dr. W. W. Johnston, Washington, D. C.

11834. Mesenteric hernia, which became strangulated and caused death in a man aged 24. Contributed by Dr. D. S. Lamb, Washington, D. C.

11883–11886. Large retroperitoneal tumor, conjoined with strangulated internal abdominal hernia, which caused death in a man aged 45. Contributed by Dr. D. S. Lamb, Washington, D. C.

11814. Amœbic abscess of the liver. Contributed by Dr. G. N. Acker, Washington, D. C.

11924. Gas bacillus dilatation of hepatic vessels; from a woman. Contributed by Acting Asst. Surg. James Carroll, U. S. A.

11937. Atrophy of kidneys with dilatation; right ureter nearly impervious; bladder contracted and ulcerated; prostatic portion of urethra ulcerated; from a soldier who had had cystitis and died of peritonitis. Contributed by Dr. Robert Pillow.

11933. Kidney showing atrophy and dilatation apparently caused by ureteral calculus. Removed by operation from a woman aged 38. Recovery. Contributed by Dr. J. W. Bovee, Washington, D. C.

11984. Kidneys showing hemorrhages into cortex; from a soldier who had gonorrhea. Contributed by Maj. W. C. Borden, surgeon, U. S. A.

11935. Chronic hemorrhagic inflammation of kidney; from a man aged 70. Contributed by Dr. D. S. Lamb, Washington, D. C.

11983. Calculi removed by operation from the kidney of a soldier. Contributed by First Lieut. J. H. Ford, assistant surgeon, U. S. A.

11728. Calculus weighing 190 grains removed from the bladder of a boy aged 5 years. Superpubic cystotomy. Recovery. Contributed by Dr. J. Ford Thompson, Washington, D. C.

11882. Fungoid growth of penis from chronic inflammation; amputation. Recovery. From a soldier aged 26 who had had chancroid and phymosis. Contributed by Acting Asst. Surg. W. T. Baird, U. S. A.

11836. Testicle, weighing 32 ounces and measuring 7.5 by 4 by 3.5 inches, of a horse 10 years old; removed for cancer. Recovery. Contributed by D. E. Buckingham, veterinary surgeon, Washington, D. C.

11941. Large cyst of Fallopian tube. Removed by the contributor, Dr. J. W. Bovee, Washington, D. C.

11874. Ankylostomum duodenale. From one of a series of cases observed in Porto Rico by the contributor, First Lieut. B. K. Ashford, assistant surgeon, U. S. A.

11725. The bones of a case of mycetoma of leg and foot; showing cavities filled with actinomyces. Contributed by Acting Asst. Surg. J. T. Arwine, U. S. A.

11745–11774 and 11903–11913. Series of 41 models showing the rarer forms of disease of the skin. Made and colored by Dr. J. Baretta, of the St. Louis Hospital, Paris. Purchased.

11946. Odontoma, weighing 3 pounds, from a 9-year-old horse whose jaw had been broken in early life. The tumor developed as a consequence. Purchased.

11947–11952. Artificial dentures carved of hippopotamus tusk and ivory in Paris previous to 1854. Contributed by Dr. James Gordon, St. Thomas, Danish West Indies.

11956–11960. Old-fashioned artificial dentures of ivory. Contributed by Dr. A. E. N. Lister, Lincoln, England.

11969–11970. Peculiar bridge work made by a Mohammedan goldsmith in the East Indies. The teeth are stained from chewing betel nut. Contributed by Dr. J. W. Egbert, Madras, India.

11980–11981. Plaster casts of dentures of Crow and Cheyenne Indians, showing entire absence of disease, which the contributor attributes to a purely meat diet. Contributed by Dr. W. A. Allen, Billings, Mont.

11739. Ivory denture made at Toronto, Canada, about one hundred years ago. Contributed by Dr. W. A. Campbell, Brooklyn, N. Y.

11794. Ivory dentures made in 1849 by Dr. Theo. Chupein, now of Philadelphia, Pa.

11818–11821. Plaster casts of dentures to illustrate the mechanism of retracting and retaining the side teeth. Contributed by E. S. Fuller, Piqua, Ohio.

11824–11829. Japanese artificial dentures made of wood; some with white stones to represent teeth; the stones are blackened when a woman is married. The molar region shows rows of nail heads. Contributed by Dr. A. G. Smith, Yokohama, Japan.

11876, 11890, 11894, and 11895. Plaster casts of dentures to show shape of hard palate in mouth breathing. Contributed by Dr. M. C. Smith, Lynn, Mass.

11897. Plaster casts of dentures showing destruction of palate and alveolar arches by lupus. Contributed by Dr. M. C. Smith, Lynn, Mass.

11808. Bird shot embedded for twenty years in the neck of a tooth. Contributed by Dr. E. E. Slaton, Eclectic, Ala.

## LIBRARY OF THE SURGEON-GENERAL'S OFFICE.

The following table shows the additions made to the library during the fiscal year 1899–1900:

| Description. | On hand June 30, 1899. | Added during fiscal year. | Total June 30 1900. |
|---|---|---|---|
| | *Volumes.* | *Volumes.* | *Volumes.* |
| Medical journals | 39,094 | 1,324 | 40,418 |
| Medical transactions | 6,153 | 139 | 6,292 |
| Bound theses | 1,989 | 65 | 2,054 |
| Bound pamphlets | 2,670 | 84 | 2,754 |
| Other medical books | 81,966 | 2,411 | 84,377 |
| Total | 131,872 | 4,023 | 135,895 |
| Medical theses | [1]61,120 | 1,846 | 62,966 |
| Medical pamphlets | 61,775 | 5,250 | 67,025 |
| Total | 122,895 | 7,096 | 129,991 |

[1] Of the total number of theses on hand June 30, 1899, there were 828 bound in 65 volumes, and 646 pamphlets bound in 53 volumes during the year.

There were presented to the library during the year 557 books and 8,740 pamphlets and journals.

Volume V, second series, of the Index Catalogue, includes the letters "E" and "F" from "Enamel" to "Fyuner," and forms a volume of 1,127 pages. It will be ready for distribution at the usual time. The appropriation for Volume VI, second series, having been made, the manuscript is in course of preparation for the printer.

## MEDICAL OFFICERS.

### UNITED STATES ARMY.

An army medical board convened by Special Orders, No. 15, Adjutant-General's Office, January 18, 1900, at Manila, P. I., approved 16 candidates, 1 of whom died before the report of the board was received.

Another board convened by Special Orders, No. 81, Adjutant-General's Office, April 6, 1900, at Havana, Cuba, examined 15 candidates during its session from May 1 to 28, 1900; 4 of these were approved, 10 were rejected as disqualified professionally, and 1 withdrew after partial examination.

*Appointments.*—None during the year.

*Promotions.*—One deputy surgeon-general with the rank of lieutenant-colonel to be assistant surgeon-general with the rank of colonel; 3 surgeons with the rank of major to be deputy surgeons-general with the rank of lieutenant-colonel; 5 assistant surgeons with the rank of captain to be surgeons with the rank of major.

*Vacancies.*—Twelve.

*Deaths.*—One surgeon with the rank of major; 1 assistant surgeon with the rank of captain (chief surgeon United States Volunteers with the rank of major); 1 assistant surgeon with the rank of first lieutenant.

*Retirements.*—One assistant surgeon-general with the rank of colonel; 2 deputy surgeons-general with the rank of lieutenant-colonel; 1 surgeon with the rank of major; 1 assistant surgeon with the rank of captain, retired with the rank of major.

*Wholly retired.*—One assistant surgeon with the rank of captain.

*Resigned.*—One assistant surgeon with the rank of captain.

*Dropped from the Medical Department United States Army, having failed to accept commission.*—One assistant surgeon with the rank of first lieutenant.

The Medical Department consists at present of 192 officers, a number which barely sufficed for the needs of the Army before the outbreak of the late war with Spain, and which proved utterly inadequate in number, notwithstanding the earnest efforts of its members to form a satisfactory basis of organization, for the large increase made to our military forces during the progress of that war. Similarly since the close of the war it has been impossible for the Medical Department, without professional assistance from civil life, to provide for the sanitary and medical work at the large number of new posts and stations that have been established at home for coast defense, in Cuba, Porto Rico, and Hawaii for garrison duty, and for the military operations in the Philippine Islands.

Excellent assistance has been obtained by contract with civil physicians, so far as concerns the professional care of the sick and wounded, but much experience is required to fit these medical men for the sanitary work of their position and to familiarize them with army methods. Most of them are young men with no knowledge of military hygiene or medical administration. They accept contracts for a year to see the world or gain professional experience, but not with a view to become expert military sanitarians. They are therefore not qualified to perform successfully many of the duties incumbent upon them. To be an efficient army medical officer, one should be able not only to prescribe for the sick and perform surgical operations, but to point out and remedy all causes tending to produce disease, and to inculcate the spirit of military discipline without which army nurses and attendants are useless. This can not be expected from young civilian physicians whose service in the Army is casual and temporary. On the other hand, the young man who desires to be permanently attached to the medical service of the Army devotes his whole energies to perfect himself for the work of his life. A lieutenant and assistant surgeon of the Regular Army has therefore, as a rule, much higher qualifications than the young physician under contract. The desirability of a large increase in our regular medical establishment is obvious. It has been heretofore recommended by me and I trust that favorable action will soon be taken by Congress in this important matter.

In the following letter, dated November 29, 1899, I called attention to the insufficiency of the Medical Department and urged legislation to increase its efficiency by adding to its numbers and providing a probationary period during which candidates for appointment, selected by an examining board in accordance with existing regulations, should be required to undergo a course of instruction to fit them for their duties as army medical officers:

[Subject: Bill for an increase in the Medical Corps of the Army.]

War Department, Surgeon-General's Office,
*Washington, November 29, 1899.*

Sir: I have the honor to transmit herewith a bill for the increase of the Medical Department of the Army. This increase is very urgently needed, and the number of additional medical officers asked for is very reasonable in view of the greatly increased demands upon the Medical Department during the past two years. The Medical Corps of the Army at present consists of 192 commissioned medical officers, but the requirements of the service are such that at the present time there are over 400 physicians in service as acting assistant surgeons under contracts made with the Surgeon-General of the Army. The number of medical officers was insufficient for our Army of 25,000 men on a peace basis prior to the Spanish-American war. At the present time a large number of posts have been established upon the seaboard of the United States, in Porto Rico, in Alaska, and the Hawaiian Islands, which, presumably, will be permanently garrisoned hereafter. There are at present garrisons at 18 new posts (upon the seaboard) in the Department of the East alone, and in the Department of the Columbia, including Alaskan posts, there are 10. The number of independent garrisons in Porto Rico at present is 11; the number of independent commands in Cuba is 30. At the present time there are stationed in the Philippine Islands, or under orders to report for duty to the commanding general, Department of the Pacific, 52 medical officers of the Regular Army, 23 surgeons of volunteers, 75 regimental surgeons and assistant surgeons of volunteer regiments, and 157 acting assistant surgeons. How many medical officers may be required for duty with troops constituting the permanent garrisons of these islands it is impossible to say at the present time; but there can be no doubt that if the number of medical officers of the Army called for in this bill is authorized by Congress it will still be necessary, for many years to come, to employ a considerable number of contract surgeons to meet the requirements of the service.

It is important in the interests of the service that the Medical Department should have a sufficient number of commissioned officers who have been carefully examined as to their physical and professional qualifications for the service, and who, as the result of special training received in the service, have become familiar with their duties and responsibilities, not only as physicians and surgeons, but as medical officers of the Army. It is also just and proper that those acting assistant surgeons and commissioned medical officers of volunteer regiments who have done good service and have the necessary qualifications, should have the way opened to them to obtain commissions; and it is evident that those who would be the most desirable acquisitions to the service can not afford to remain indefinitely under a contract which may be terminated at any moment, and which affords no prospect of advancement.

In view of the facts stated, I respectfully urge the importance of an increase of the Medical Department of the Army, as provided in the inclosed bill, at the earliest practicable date.

Very respectfully,

Geo. M. Sternberg,
*Surgeon-General, United States Army.*

The Secretary of War.

### BILL for the increase of the Medical Department of the Army.

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That there shall be added to the number of medical officers of the Army now authorized by law, four assistant surgeons-general with the rank of colonel; ten deputy surgeons-general with the rank of lieutenant-colonel; thirty surgeons with the rank of major; and eighty assistant surgeons with the rank of first lieutenant, who shall have the rank of captain at the expiration of five years' service, as now provided by law: *Provided,* That the original vacancies created by this act in the grade of colonel, lieutenant-colonel, and major shall be filled by seniority promotion in accordance with established laws and regulations.

SEC. 2. Hereafter, candidates for appointment in the Medical Corps of the Army who pass a medical examining board in compliance with existing regulations shall be appointed acting assistant surgeons for a probationary period of six months. During this probationary period they shall attend the Army Medical School established at the Army Medical Museum in the city of Washington, and the faculty of the Army medical school shall report to the Secretary of War at the end of the prescribed course of instruction upon the fitness and relative standing of the probationary candidates; those who are recommended by the faculty may then be commissioned by the President to fill existing vacancies in the Medical Corps of the Army.

SEC. 3. Acting assistant surgeons appointed in accordance with the provisions of section two shall be paid one hundred dollars per month, and shall not be entitled to any allowances or to mileage in reporting for the prescribed course of instruction, or in returning to their homes if they are not recommended for a commission.

SEC. 4. The number of acting assistant surgeons appointed in accordance with the provisions of section two shall not exceed the number of vacancies existing or to result from retirements during the probationary period.

SEC. 5. Candidates who have rendered satisfactory service as acting assistant surgeons, or as commissioned medical officers in the Volunteer Army of the United States for a period of six months or more, shall be exempted from this period of probation and may be commissioned at once if vacancies exist and they pass a satisfactory examination as to their physical, moral, and professional qualifications.

This bill is intended to provide only for an increase in the Medical Corps absolutely necessary for the medical care of the regular troops now in service. If the Army should be increased to 100,000 enlisted strength, a corresponding increase in the Medical Corps would be required, and I have submitted to the honorable the Secretary of War the draft of a bill providing for a suitable medical corps for an army of that size under existing conditions.

## UNITED STATES VOLUNTEERS.

During the year 9 appointments have been made as surgeons, United States Volunteers, with the rank of major; 7 of the appointees were from the Regular Army and 2 were acting assistant surgeons, United States Army.

*Died.*—One chief surgeon with rank of major and 1 surgeon with the rank of major.

At the end of the year there remained in service 34 surgeons with the rank of major, 11 of whom were captains in the regular establishment.

## REGIMENTAL SURGEONS AND ASSISTANT SURGEONS, UNITED STATES VOLUNTEERS.

On June 30, 1900, there were 78 regimental surgeons and assistant surgeons in the service—25 majors, 13 of whom were captains in the Regular Army; 27 assistant surgeons with the rank of captain, and 26 assistant surgeons with the rank of first lieutenant.

*Deaths.*—One lieutenant and assistant surgeon.

These regimental medical officers were appointed in accordance with the provisions of the act of Congress approved March 2, 1899 (an act for increasing the efficiency of the Army and for other purposes). (Chap. 352, Statutes at Large, vol. 30.) Three medical officers were commissioned for each volunteer regiment, one with the rank of major, one with the rank of captain, and one with the rank of first lieutenant. It was the evident intention of Congress that these medical officers should have the pay of the rank respectively held by them, but by a decision of the Comptroller of the Treasury the medical officer commissioned by the President as a captain can receive only the pay of a first lieutenant, and the Paymaster's Department of the Army has necessarily been ruled by this decision. The medical officers who accepted these positions had seen previous service in the war with Spain. Some of them had been brigade surgeons and others regimental surgeons with the rank of major. When they were offered commissions as assistant surgeons with the rank of captain there was no reason to suppose that they would not be paid as captains. I therefore recommend Congressional action to insure to these officers the pay of a "captain, mounted," from the date of their acceptance of such commissions.

### ACTING ASSISTANT SURGEONS, UNITED STATES ARMY.

There were in service June 30, 1899, 389 acting assistant surgeons. During the year ended June 30, 1900, contracts were made with 434 physicians, while 358 contracts were annulled and 3 terminated by death, leaving in service June 30, 1900, 462 under contract. Of this number 121 were on duty in the United States, 22 on transports, 10 in Porto Rico, 60 in Cuba, and 249 in the Philippine Islands.

The following tabulation shows the number of contracts with physicians made and annulled from April 17, 1898, to June 30, 1900:

| | Out of service. | In service. | Total. |
|---|---|---|---|
| Served under 1 month | 34 | 15 | 49 |
| Served 1 to 6 months | 339 | 87 | 426 |
| Served 6 to 12 months | 144 | 73 | 217 |
| Served 1 to 2 years | 78 | 250 | 328 |
| Served over 2 years | 1 | 37 | 38 |
| Total | 596 | 462 | 1,058 |

| | |
|---|---|
| Total number serving in 1898-99 | 855 |
| Daily average serving in 1898-99 | 439 |
| Total serving in 1899-1900 | 618 |
| Daily average serving in 1899-1900 | 415 |

Average service of 596 now out of service, five months and twenty-six days.
Average service of 462 now in service, one year and three months.
Average service of 1,058 acting assistant surgeons, nine months and twenty-six days.

All the contract surgeons now in service have been examined by boards of medical officers constituted by me to determine their fitness, physical and professional, for the discharge of their duties. The above tabulation shows, however, that a sufficient inducement is not held out to retain these medical men in service. Out of a total of 1,058 under contract since April 18, 1898, 373 served only six months or less. This is a serious loss to the Department, as it takes about that length of time to familiarize the civilian surgeon with the duties of his new sphere of action. As an inducement for these contract surgeons to remain in service, and as a reward for those who have continued in service for a year or more, I recommend that the commission of assistant surgeon of volunteers be granted them, as provided in a bill which I submitted on April 4, 1900, as follows:

A BILL for the appointment of assistant surgeons of volunteers.

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That "contract surgeons" who have rendered faithful and satisfactory service with the Army of the United States for a period of one year, and who have passed a satisfactory examination as to their physical and professional qualifications, shall be commissioned by the President as assistant surgeons of volunteers, with the rank of first lieutenant, subject to honorable discharge from the service whenever their services are no longer required.

SEC. 2. That at the end of two years' service as first lieutenants assistant surgeons of volunteers, appointed in accordance with section one of this act, who have rendered faithful and satisfactory service, shall be commissioned by the President as assistant surgeons of volunteers, with the rank of captain, subject to honorable discharge from the service whenever their services are no longer required; and that they shall receive the pay of a captain mounted.

### ARMY MEDICAL SCHOOL.

This school was closed during the school year 1899–1900, as existing conditions in the Medical Department rendered it impracticable to carry out the usual school programme.

### BOARDS FOR THE STUDY OF TROPICAL DISEASES.

On my recommendation a board of medical officers, consisting of First Lieut. Jere B. Clayton, assistant surgeon, United States Army; First Lieut. Richard P. Strong, assistant surgeon, United States Army, and Acting Asst. Surg. Joseph J. Curry, was appointed to meet at one of the general hospitals in or near Manila, P. I., to be designated by the commanding general, Department of the Pacific, upon the recommendation of the chief surgeon of the department, for the purpose of studying tropical diseases as they occur in those islands. It was my desire that this board should be given all the appliances and assistance necessary for conducting their researches and every opportunity for obtaining access to cases and making autopsies, etc. In my letter of instruction to the chief surgeon I stated that the members of the board need not necessarily work in the same laboratory, and while pursuing their general investigations they could make blood examinations and bacteriological researches for the purpose of clinical diagnosis as well as with a view to the promotion of our knowledge of infectious diseases prevailing in the Philippines. I stated that if stationed at different hospitals the members of the board should meet occasionally for consultation.

Each member should make an independent report of investigations conducted by him and of the general result of his blood examinations, etc. A quarterly report of progress should be made by each member of the board, which should indicate the nature of the work in which he has been engaged and the results attained. Full and detailed reports relating to particular diseases investigated will be made by the individual members of the board whenever they are prepared to submit such reports.

Special attention should be given to tropical dysentery, to the malarial fevers prevailing in the Philippines, to beri-beri, to intestinal parasites, and in general to all tropical diseases the etiology of which has not been completely worked out.

Some excellent work was done by the members of this board and their associates in the laboratories of the large hospitals. See, for instance, infra page 755, under the heading of "Dysentery."

Another board was appointed to meet at Camp Columbia, Quemados, Cuba, in May, 1900, for the purpose of pursuing scientific investigations with reference to the infectious diseases prevailing in the island of Cuba. This board consisted of Maj. Walter Reed, surgeon, United States Army, and Acting Asst. Surgs. James Carroll, Aristides Agramonte, and Jesse W. Lazear, United States Army.

The instructions to Major Reed, president of this board, included the following:

> You will naturally give special attention to questions relating to the etiology and prevention of yellow fever. As you are familiar with what has already been done by other bacteriologists in this field of investigation, I do not consider it necessary to give you any suggestions or detailed instructions. But it is evident that the most important question which will occupy your attention is that which relates to the etiology of this disease.
>
> You will also take advantage of such opportunities as may offer for the study of other infectious diseases, and especially of the malarial fevers prevailing in the island of Cuba. An important question in connection with the diseases of tropical and semitropical countries relates to the etiology of febrile attacks of short duration, to which strangers are especially subject. Should you have time, there will be ample opportunity for the study of leprosy in the leper's hospital in the city of Havana. Attention should also be given to the infectious diseases of the lower animals, in case any such prevail, the etiology of which has not been definitely determined.
>
> You are authorized to obtain from the medical supply depot in Havana such articles as you may require, upon requisitions approved by the chief surgeon, Division of Cuba. Necessary articles not on hand in that depot should be called for upon special requisitions to be sent to this office.

It is with regret that I have to report the death of one of the members of this board while in the discharge of his duty under the above instructions. Acting Asst. Surg. Jesse W. Lazear died of yellow fever September 25, 1900, at Columbia Barracks, Quemados, Cuba. Acting Asst. Surg. James Carroll, another member of this board, suffered from a severe attack of the disease, but fortunately recovered.

## THE HOSPITAL CORPS.

At the close of the fiscal year ending June 30, 1899, the Hospital Corps consisted of 189 hospital stewards, 287 acting hospital stewards, and 2,892 privates, a total of 3,368. During the fiscal year ending June 30, 1900, the gain to the corps was 2,272 men, of whom 1,490 were obtained by the enlistment of civilians, 282 by reenlistment, and 500 by transfer from the line. The corps lost during the same period 1,549 men, the greater part of them by discharge. It is worthy of note that 88 were discharged on certificates of disability, 2 were killed in action, 1 was reported missing, and 27 died of disease. The number of Hospital Corps men in service June 30, 1900, was 167 hospital stewards, 381 acting hospital stewards, and 3,543 privates, a total of 4,091.

*Hospital stewards.*—The number of hospital stewards decreased during the fiscal year from 189 to 167, it being impossible to fill vacancies as they occurred, inasmuch as the number of hospital stewards considerably exceeded the allowance of 100, which was the number authorized before the war with Spain, the increase in this grade authorized in 1898 having been for the war only. However, by the act of Congress approved May 26, 1900 (published in General Orders, No. 76, Headquarters of the Army, June 1, 1900), 100 additional hospital stewards were allowed. An examination is about to be held to fill the vacancies thus created.

*Acting hospital stewards.*—Owing to the wording of section 7 of the act of Congress approved March 1, 1887, which established the Hospital Corps, the status of the acting hospital steward has been uncertain. He was, in point of fact, a noncommissioned officer. The wording of the law appeared to provide that the acting steward should be a private temporarily detailed rather than a true noncommissioned officer. The rulings of the accounting officers of the Treasury in regard to this matter in individual cases have varied, but the question having now come up with especial prominence, in view of the fact that several acting hospital stewards have been placed upon the retired list, a general decision was rendered for the first time by the Comptroller of the Treasury on April 16, 1900 (published in Circular No. 231 of Paymaster-General's Office, April 19, 1900), in which it was decided that an acting hospital steward is a true noncommissioned officer, and is entitled to travel pay and extra pay as such, and not as a private, and when retired is entitled to 75 per cent of the pay and allowances of his grade.

In the volunteer regiments organized during the year 1899, hospital stewards (three in number for each regiment) were noncommissioned officers of the regiment, and the regulations prescribed for the organization of these regiments directed that candidates for appointment as hospital stewards should be required to produce certificates of efficiency from a reputable college of pharmacy. Experience in the summer of 1898 having shown, however, the great necessity that there should be a noncommissioned officer of the Medical Department with each regiment, who should be familiar with the preparation of reports and returns, in order that the proper medical statistics should be kept and that the enlisted men of the Hospital Corps should be properly accounted for, it was informally arranged that one of the volunteer stewards for each regiment should be secured by the appointment of an acting hospital steward of the Regular Army to that position. Experienced and capable acting hospital stewards were accordingly appointed to these positions upon my recommendation. The benefits of this course have been apparent from the orderly manner in which the records of the Medical Department in the volunteer service have been kept.

*Schools of instruction.*—The schools of instruction at Washington Barracks, D. C., and Angel Island, Cal., have been continued during the fiscal year, 726 men having been instructed at Washington Barracks and 692 at Angel Island. The greater part of these men have been sent to the Philippines. A school of instruction has also been established at hospital No. 3, Manila, P. I., and until the military hospital No. 1, Havana, Cuba, was given up, a training school was in successful operation at that hospital.

A large number of hospital corps men of all grades have been commended by surgeons with whom they were serving. Of many of these mention is made in the reports embodied in this volume. The chief surgeon, Department of the Visayas, reports that he never knew of a hospital corps man who failed in his duty in any way under fire. An experience with the most formidable diseases, such as yellow fever and the bubonic plague, has also shown that the men of the Hospital Corps are always ready to expose themselves with cheerfulness to dangers which are rightly more dreaded than those of the battlefield. Where so many have done well it would appear invidious to make distinctions, and doubtless many acts of heroism have never been reported to me. An amputation performed by Privates Samuel Jones and Henry Becker,[1] of the Hospital Corps, is, however, particularly worthy of note as an evidence of courageous and judicious performance of duty in an emergency, for which they had received no special training. On January 27, 1900, a certificate of merit was awarded to Private Philip M. Beyerl, Hospital Corps. On November 13, 1899, while on duty on the hospital ship *Relief*, an insane patient having eluded his attendant and jumped overboard, Private Beyerl sprang after him without a moment's hesitation, and, although the night was dark and the bay rough, succeeded in reaching the patient and supported him until a boat came to his assistance. A certificate of merit was also awarded on June 14, 1899, to Private Harry Shields, Hospital Corps, for distinguished conduct in the flood at Brackettsville, Tex. General Orders, No. 15, Adjutant-General's Office, February 13, 1900, publishes the name of one hospital steward and six privates of the Hospital Corps, whose conduct was especially meritorious in voluntarily nursing yellow-fever patients at Fort Barrancas, Fla., during the epidemic which prevailed at that post in November, 1897.

## ARMY NURSE CORPS.

The number of female nurses in the Army Nurse Corps has remained approximately constant during the year, there having been 187 in the service July 1, 1899, and 210 on June 30, 1900; 165 contracts were made and 149 were annulled. The movement of troops to the Philippines has occasioned a corresponding movement of nurses, and 122 are there now, against 33 at the beginning of the year. Female nurses have recently left Honolulu and the hospital ship *Relief*, but are serving in increasing numbers on the army transports in the Pacific.

The number of nurses in the United States was temporarily increased in the autumn of 1899, but otherwise remained nearly the same, having been 65 a year ago and 60 at present. They are now stationed at the general hospitals at the Presidio of San Francisco, Cal., and Fort Bayard, N. Mex., at two post hospitals, and at the school of instruction for the Hospital Corps at Angel Island. No nurses remain in Porto Rico at present, and their number in Cuba has been reduced from 76 to 16.

The organization of the Army Nurse Corps has been steadily improved and its adjustment to the Army made more satisfactory in details. The work of the nurses continues to be highly appreciated and their services are in demand at almost all hospitals of importance.

The regulations governing the Army Nurse Corps which were published in a circular from this office June 20, 1899, approved by the Secretary of War, were reissued March, 9, 1900, with but two important changes. Appointments are now limited to citizens of the United States, this provision being waived only in the cases of those who have previously served (and then only if they have legally declared intention of becoming citizens). The leave of absence authorized, which was previously in the proportion of thirty days for each year of past service, is now thirty days in each calendar year, regardless of length of service.

---

[1] Report of the chief surgeon, Department of the Visayas, p. 670.

The use of the nurses at the hospital corps schools as instructors in the preparation of food for the sick continues as reported last year, and has been most successful. The nurse at Angel Island is under contract as one of the Army Nurse Corps, but the nurse at Washington Barracks, is for local reasons, now classed as a civilian employee.

There has been no death among the nurses in service during the year.

## MEDICAL AND HOSPITAL SUPPLIES.

Military emergencies, which have controlled the medical supply of the Army for several years, continue to influence the operations of the department having it in charge. Sudden and unforeseen demands, such as those made by the relief force recently sent to China, necessarily disturb the most liberal provision for known conditions, and compel the consideration of an ample margin of safety. Happily, in this instance the medical supply in Manila was sufficient, not only to provide for the troops immediately employed, but to meet the estimated wants of an increased force for a considerable period. Such contingencies, and the evident propriety of maintaining a large medical supply on the Pacific coast, have led to the enlargement, now in progress, of the medical supply depot at San Francisco, so that it may contain supplies for 100,000 men for six months. With a corresponding provision in New York, and the holding at St. Louis of supplies sufficient for 20,000 men for the same period, great capacity for issue will be insured, whether for emergency or routine supply.

New York is, and will probably continue to be, our cheapest purchasing market, and that most available for the distribution of supplies, so that it has been my aim to free the supply depot at that place as far as possible from the interruption of minor issues to posts at home, and enlarge its ability to meet calls from abroad. To this end its home territory has been restricted to the posts on Lake Ontario and the Atlantic seaboard. The number of posts, including arsenals, in this area is 52. In this way this depot has been free to deal with issues to Cuba, Porto Rico, and the larger part of the very extensive supply needed in the Philippines.

A like restriction of the near work of the San Francisco depot to the 20 posts in the departments of the Columbia and California has enabled that depot to deal satisfactorily with the issues to Alaska and the Sandwich Islands, as well as to contribute largely and quickly to an unexpected demand, such as that of the China relief expedition, and to restore withdrawals from Manila. As above noted, it is my desire to enlarge the capacity of this depot in order to give greater security in meeting emergency demands.

This narrowing of the territory of the depots at New York and San Francisco has greatly enlarged the area of supply for the depot in St. Louis, so that it now has 52 dependent posts distributed through the country from the Canadian to the Mexican border and the Gulf of Mexico, and from the Alleghenies to the Rocky Mountains. It is considered that this control of supply will prove satisfactory.

The diminution of the forces in Cuba and Porto Rico has enabled me to close several of the minor depots in those islands, so that only two remain in active operation—one of large storage in Havana and a small supply in San Juan.

The unusual military conditions existing in the Philippine Islands, the multiplication of posts and garrisons, the demands connected with an impoverished and unsanitary people, and the unfamiliarity with military restrictions and proper responsibility for public property of many of the medical officers temporarily employed have resulted in large requisitions for medical supplies from that quarter, so that it is not yet possible to determine with strict accuracy what constitutes a normal provision for troops stationed in the Philippine Islands.

It has been my practice to allow the largest possible measure of independence to medical authorities in remote spheres of action, holding them to proper accountability; but in the execution of my responsibility I have made some few reductions in the large requests from Manila. With rare exceptions the supplies asked for have been sent as rapidly as the conditions of the market, due security of inspection, and opportunity for transportation would permit. At the same time the medical supply officer at Manila has been provided with ample funds and has been authorized to purchase, in the local market, any supplies urgently needed.

The enormous quantities of standard articles of supply which have been sent to the Philippines or purchased in Manila since January 1, 1900, will be appreciated by reference to the following list, which contains a few only of the articles furnished:

| | | |
|---|---|---|
| Bismuth, subnitrate (3 tons) | pounds.. | 6,250 |
| Cathartic pills, compound | number.. | 2,900,000 |
| Castor oil | quarts.. | 12,471 |
| Chloroform, in 100-gram bottles | bottles.. | 16,465 |
| Ether, in 100-gram tins | tins.. | 15,000 |
| Petrolatum spissum (16 tons) | pounds.. | 31,930 |
| Quinine tablets | tablets.. | 23,750,000 |
| Plaster, adhesive, 30 centimeters wide | meters.. | 15,500 |
| Bandages, roller | number.. | 1,680,000 |
| Gauze, plain | yards.. | 270,000 |
| Beef extract, in 100-gram tins | tins.. | 41,200 |
| Alcohol | quarts.. | 39,750 |
| Brandy | do.... | 22,000 |
| Whisky | do.... | 16,000 |
| Envelopes, official, large | number.. | 115,000 |
| Envelopes, official, letter | do.... | 350,000 |
| Envelopes, official, note | do.... | 200,000 |
| Pens | do.... | 294,000 |
| Clinical thermometers | do.... | 18,067 |
| Towels, hand | do.... | 84,000 |
| Pajamas, suits | do.... | 28,336 |

This list might be extended, but my desire is simply to indicate the very large supply that is required for the present unusual service conditions, and to make plain the need for continuous effort to avoid an embarrassing deficiency.

In the matter of hospital stores I have felt called upon to exercise some restraint. The quantities asked for in the Philippines have been very large, and in view of the authorized allowance of 40 cents a day for the food of sick soldiers and the readiness of the Subsistence Department to furnish these supplies for sale, I have held that they can not be properly purchased by the Medical Department except for emergencies. I was and am still apprehensive that if these hospital stores are issued freely the light diet of the sick will habitually depend upon this emergency provision and not upon the allowance made by Congress.

A new table of medical supply is contained in the revision of the Manual for the Medical Department, now issuing from the press, and it is expected that the changes made, chiefly in the addition of approved medicines, appliances, and material, as well as in an increased allowance, will result in meeting every reasonable demand and in avoiding irregular issues aside from those of emergency.

To our already extensive field equipment there has been added a very compact chest intended for the use of detachments serving in the field or independently elsewhere. The supply is calculated for a battalion and a period of six months. Three hundred and eighty-eight of these chests have been sent to the Philippines and are probably in service. Their cost is $114.81 each, including a compact operating case. The chests, five in each set, of the model of 1898 continue in service, and of these there are approximately 130 sets, also in the Philippines. The cost of each set is $477.61.

It is believed that our hospital equipment is fully abreast of every military necessity and compares favorably with that of other nations. Special requests for remedies, instruments, and apparatus are favorably considered if there is evidence that they will be helpfully employed.

The boards convened in Havana and Manila for the investigation of tropical diseases have been liberally supplied with the literature and material necessary for the prosecution of their work.

Since my last report 9 ice machines of large capacity, 3,000 to 4,000 pounds daily, have been sent to the Philippines for use in that military division, and 5 more are to be shipped as soon as finished by the manufacturers.

## RECRUITING.

The total number of men examined for enlistment in the Regular Army during the year 1899 was 70,311, of whom 64,303 were white and 6,008 were colored. The number accepted was 47,899, or 681.24 out of every thousand examined. The ratio of accepted men was 677.36 for the white and 722.87 for the colored. White men to the number of 49 and colored men to that of 26.96 per thousand declined enlistment. The rate of rejection on primary examination was 273.64 among the white and 250.17 among the colored candidates, giving a mean of 271.64.

Of every thousand examined 74.56 were rejected on account of imperfect physique, including overheight, underheight, overweight, and underweight; 41.43 for diseases of the eye, 38.06 for diseases of the circulatory system, 26.53 for diseases of the digestive system, 22.43 for affections of the genito-urinary system, 17 for venereal diseases, 9.61 for hernia; while 9.81 were rejected as generally unfit or undesirable, 3.74 as minors, 3.12 on account of bad or doubtful character, and only 1.32 on account of illiteracy, imperfect knowledge of the English language, or mental insufficiency.

Of every thousand of the accepted men 855.61 were natives of the United States, 41.61 were born in Germany, 34.18 in Ireland, 17.14 in England, 11.55 in Canada, 6.58 in Sweden, 4.68 in Russia, the remainder in various other countries.

Recruiting returns for volunteers are not rendered to this office.

## IDENTIFICATION OF DESERTERS AND OTHER UNDESIRABLE MEN.

During the year ending June 30, 1900, 9,718 transcripts of the identification cards of 5,318 delinquent ex-soldiers were filed among the classified descriptions of undesirable men, an average of 1.83 per man as compared with 2.06 for the antecedent period, and 438 transcripts were canceled. On June 30, 1900, there remained 43,248 transcripts, an average of 2.20 each for 19,643 delinquent soldiers whose enlistment would be contrary to law.

June 30, 1899, 161,212 identification cards were on file for recruits and 5,549 for released military convicts and soldiers discharged dishonorably or without honor. The receipts for the following twelve months were 21,504 and 1,090, respectively, bringing the totals, June 30, 1900, up to 182,716 and 6,639.

From July, 1890, the time of the first identification, to June 30, 1900, 1,819 identifications have been made; 18 in 1890, 111 in 1891, 215 in 1892, 104 in 1893, 110 in 1894, 121 in 1895, 108 in 1896, 68 in 1897, 347 in 1898, 480 in 1899, and 137 during the first half of 1900.

## HOSPITALS, POST AND GENERAL.

During the past year modern hospitals were completed at Fort Adams, R. I.; Madison Barracks, N. Y.; Fort Slocum, N. Y., and Fort Banks, Mass. Additional wards, kitchens, and dining rooms were added to the hospitals at Fort Ethan Allen, Vt., and Fort Porter, N. Y., and a new kitchen was added to the hospital at Fort Monroe, Va. The hospital at Mayaguez, P. R., was reconstructed, and the hospital at San Juan, P. R., was provided with new plumbing and otherwise improved. Plans and specifications were also prepared for a hospital at Santa Clara Barracks, Cuba.

New mortuaries of brick were erected for the hospitals at Washington Barracks, D. C.; Fort Wadsworth, N. Y., and Fort Crook, Nebr.

An additional ward for fifty beds and a new kitchen are in course of construction at the Army and Navy General Hospital, Hot Springs, Ark., and new hospitals are being erected at Fort Terry, N. Y.; Fort Preble, Me.; Fort Williams, Me.; Fort Strong, Mass.; Fort Leavenworth, Kans.; Fort Ontario, N. Y.; Fort Howard, Md.; Fort Du Pont, Del., and an important addition is being made to the hospital at Washington Barracks, D. C.

New quarters for hospital stewards were completed at Fort Snelling, Minn.; Fort Washington, Md., and at the Army and Navy General Hospital, Hot Springs, Ark. New quarters are now in the course of erection at Fort McDowell, Cal., and at Washington Barracks, D. C.

A general hospital or sanitarium for the treatment of officers and men of the Army suffering from pulmonary tuberculosis was established on my recommendation during the past year at Fort Bayard, N. Mex. Transfers of enlisted men suffering from this disease are made on the recommendation of medical officers of the Army forwarded through military channels. Discharged soldiers who are entitled to the benefits of the United States Soldiers' Home, Washington, D. C., are cared for at this establishment when sent by order of the board of commissioners of the Home, the expense for the maintenance of such soldiers being paid from the Soldiers' Home funds. On January 6, 1900, there were 47 patients under treatment at this sanitarium; on June 30, 83, and at the present date, October 17, 109.

The general hospital at Savannah, Ga., and the Josiah Simpson General Hospital at Fort Monroe, Va., were closed during the year, the necessity for their continuance having ceased. Besides the special hospitals at Hot Springs, Ark., and Fort Bayard, N. Mex,, there are now in service in the United States only two general hospitals—one at

Washington Barracks, D. C., and the other at the Presidio of San Francisco, Cal. The one supplies the needs of the troops serving in the eastern part of the country, and is utilized as a training school for recruits for the Hospital Corps. The other receives sick men from organizations en route to the Division of the Philippines and patients sent from the hospitals in Manila for the benefit of the home climate. The following report describes the organization and management of this establishment:

### REPORT ON THE UNITED STATES ARMY GENERAL HOSPITAL, PRESIDIO OF SAN FRANCISCO, CAL., FOR THE YEAR ENDING JUNE 30, 1900, BY MAJ. A. C. GIRARD, SURGEON, UNITED STATES ARMY, COMMANDING THE HOSPITAL.

*History of the hospital.*—When the Eighth Army Corps assembled at San Francisco, and during the period of its organization, the hospital service for the troops was performed under canvas at Camp Merritt, but the climate proving unfavorable for this method of accommodation the new brick barracks at the Presidio were assigned for the purpose, pending suitable construction for hospital purposes. A general hospital was organized on December 1, 1898, in these buildings and steps were at once taken for the construction of a hospital. The plan most suited for the purpose was that of Mr. W. H. Willcox, an architect of San Francisco, and this plan was adapted to the needs of the military service under the supervision of Lieut. Col. J. V. D. Middleton, deputy surgeon-general, and Col. William H. Forwood, assistant surgeon-general, United States Army. Contracts were let early in 1899, and in May when I reported at this place I found the work well under progress. I was assigned as inspector for the Medical Department on these buildings. The location of the hospital has its advantages and disadvantages. The advantages are proximity to the city, to the post of the Presidio, and to the camps which were to shelter the troops assembling for duty in the Philippines and the volunteers returned therefrom. The disadvantages are exposure to the high winds and fogs of the Presidio, the low ground upon which it is located, and the proximity to the liquor shops adjoining the Presidio. On July 1, 1899, I was assigned as commanding officer of the hospital. I had utilized the time I was acting as inspector to make provision for the equipment of the hospital from the supply depot and for the purchase of such articles as are usually not provided by the Medical Department. Shortly after the equipment of the hospital the number of its inmates was suddenly raised from 289 to 1,040, not only filling the wards in the new hospital, but two of the brick barracks and four of the wooden barracks at the post, which in great haste had to be supplied with the necessary equipment. Since then the average occupancy of the hospital has necessitated the continued use of the buildings at the post, as the new hospital had an accommodation of only 380 beds. Pending the introduction of a steam plant, which at first when the plans were prepared had been considered unnecessary and which I applied for soon after my arrival, the buildings had to be heated by coal stoves, where pipes could be passed through ridge ventilators, which was possible in the wards and dining rooms. All the other rooms which had not been fitted with flues had to be heated by coal-oil heaters, of which 100 were provided, as they are needed in this climate in every living room almost every day of the year. The steam plant was finally allowed and is now in course of construction and will be described hereafter.

*Description of the buildings.*—The general plan of the hospital can best be described as a quadrangle formed by a veranda, onto which abut all the buildings, except the administration building, which occupies a greater part of the front, with on either side the buildings for male and female nurses. The five wards abut on the veranda on each side. At the lower side it is traversed by the dining room and kitchen buildings; in the center and at either corner the quartermaster, commissary, and baggage buildings on one side, and the hospital corps dining room, and kitchen on the other. The buildings are framed with redwood weatherboarding, elevated above the sloping ground from 5 feet in the upper buildings to 20 in the lower; basements inclosed with latticework, with the exception of those of the three last-mentioned buildings, which are converted into rooms.

The administration building is a two-story building intersected in the center by cross and longitudinal halls dividing the building into front and rear rooms. To the right of the front hall are the two rooms assigned to the executive officer, 13 by 16 feet each. The next room, 13 by 16 feet, is used for a medical library, and the corner room, 17 by 17 feet, for the office of the commanding officer, and the room back of this, 12 by 13 feet, for the office of the chief nurse. On the left of the entrance the first room, 13 by 16 feet, information bureau; the next room, 13 by 16 feet, officer of the day; next room, 13 by 16 feet, stenographer's room and closets for records; and the large corner room, corresponding to the commanding officer's and chief nurse's room combined, is used for the record clerks. After passing the longitudinal corridor from the front entrance we reach on the right a staircase, 4 feet 8 inches, with two landings leading to the upper story; next to that the water-closet, lavatory, bathroom, and small storeroom—the whole 21 feet long by 16 feet deep. The room next to that, 6 feet 6 inches by 16 feet, which was originally designated as clothes lockers and of no use in that capacity, was converted into a telephone room. The next room, 12 by 16 feet, is the commissary's office, and the corner room, 13 by 16 feet, the quartermaster's office. To the left of this hall the rooms are assigned as follows: The first room, 13 by 16 feet, for post-office with money-order office, established at my request by the Post-Office Department; the next room, 13 by 16 feet, as a printing office; the next as a room for the property officer and sleeping accommodations for two night clerks for the dispensary; the next to this the corner room, the dispensary, 17 feet 8 inches by 16 feet. These rooms all front on verandas, with double windows, and their doors all lead to the corridor with the exception of the dispensary, which has a door opening on the veranda.

The second story has been utilized as follows: In front of the hall a room assigned to a dentist; all the rooms to the right, seven in number, assigned to medical officers as quarters; the room over the commissary's office as photograph room, and the water-closet, lavatories, and bathrooms are over the corresponding rooms below. The rooms to the left of the hall front, five, are assigned as officers' wards. Those over the property officer's room are used as an eye, ear, and throat clinic; next to this an X-ray room, and adjoining this the pathological laboratory. Only six rooms in this building are provided with fireplaces.

To the left of the administration building, abutting on the lateral veranda, is the building for female nurses. It is a two-story structure with twelve sleeping rooms for nurses, 11 by 13 feet 6 inches each, opening on a central corridor of 8 feet. At one end is a dining room, 24 by 13 feet 6 inches, and opposite to it a scullery, 7 feet 6 inches by 13 feet, and kitchen, 10 feet by 13 feet 6 inches, and a lavatory, water-closet, and bathrooms. Opposite the bathroom is a staircase leading to the second story which has twelve rooms, 11 feet by 13 feet 6 inches each, and five rooms, 7 feet by 13 feet 6 inches each, abutting on the lavatory and bathrooms and staircase. There are no conveniences for heating this building, and coal-oil heaters have to be used until the steam plant is introduced.

At the opposite angle of the front of the hospital, abutting on the veranda, are the barracks for the hospital corps. It is a two-story building with a dormitory in each story, 36 feet 4 inches by 68 feet 6 inches. Abutting on this toward the veranda are rooms, 13 feet 8 inches by 9 feet 6 inches each, used for clerk's office, hospital steward's room, barber shop, and tailor shop, and farther toward the veranda a room with clothes lockers, 6 feet by 13 feet 8 inches, and staircase; on the opposite side water-closets, lavatories, and bathrooms with two bath tubs. The same arrangement is in both stories, except that the rooms are differently assigned.

The wards are isolated buildings, abutting as aforesaid on the veranda and variously raised from the ground as stated above. Their height is 15 feet by 24 feet by 127 feet, with 16 windows on each side. At the end nearest the veranda are, on the right side from the entrance, the linen room, 7 feet by 11 feet 9 inches, a diet kitchen, 8 feet by 11 feet 9 inches, and the wardmaster's room, 8 feet by 11 feet 9 inches. On the opposite side a bathroom, 6 feet; wash room, 6 feet, and a water-closet, 10 feet, all by 11 feet 9 inches, and separated by a hall 7 feet 6 inches. At the other end is a room 20 by 24 feet, which is used as a recreation room, and connects with the outside by a staircase. The floors of the wards are pine, with paraffin dressing. At present they are heated by three coal stoves, but when the steam plant is completed there will be a radiator underneath each window, connected with the fresh-air register, running under the floor of the ward, which receives its fresh air by suction from a shaft at the outer end of the ward. Underneath each bed is a foul-air register, which connects by a metallic duct with the foul-air duct running under the center of the ward and connecting with a brick shaft at the front end of the ward, in which, by means of steam coils, the air will be accelerated for aspiration. There are over each ward three metal ventilators reaching to the roof, with a register at the bottom, which is closed when artificial ventilation is used. For inlet the windows are provided with movable transoms 32 by 22 inches. The wards, allowing two beds between the windows, accommodate 40 patients. The wards have been named by the letters of the alphabet, commencing on the left.

The original plans of the hospital contemplated an operating pavilion, which, for the sake of economy and the improbability of much surgical work being done in this hospital, was cut off from the original plans and in place ward C was partitioned off for the purpose. The result is that ward C contains 28 beds instead of 40. The exterior end of the ward on the left side entering has a room 9 feet 9 inches by 14 feet, which was designated as a pantry, but as this ward has already a pantry, this room was converted into a dressing room for minor surgical operations. It contains a sink and shelving. Next to this is a vestibule 7 feet by 8 feet 9 inches, which has an entry on the outside staircase which, in place of communicating with the end room, gives ingress through this vestibule. Next to this is a room 10 feet by 8 feet 9 inches, which was designated as a recovery room, but it will be utilized as a sterilizing room as soon as the sterilizer lately received is put in connection with the steam apparatus. To the right on entering this section of ward C is a room 14 feet by 18 feet 9 inches, which was designated as a nurses' room, but has up to the present time been used as a sterilizing room, and on this room being transferred will probably be utilized as a recovery room. Next to this, opposite the vestibule, is a wash room, into which I had placed foot-cock washtubs. This room is intended for a final preparation room for operations. These four rooms are separated by a hall 5 feet 6 inches wide, which connects by a double door with the ward. Next to the wash room is a room 10 feet 8 inches by 8 feet 9 inches, which is designated as an etherizing room. It has, however, been used as an instrument room and for the keeping of sterilized dressings, being occasionally used for etherizing when more than one patient was to be operated on. The end of the ward has been set aside as an operating room and is 20 by 24 feet, perhaps unnecessarily large. It has a skylight 5 feet square in the ceiling and is lighted by four windows. The floor is now being tiled. It is lighted by two 4-light chandeliers and two droplights.

At the lower end of the lateral veranda is the building called the quartermaster storehouse. This was finished at first only in the second story, while the basement, which was 12 feet above the ground on its lower end, was left unfinished. It having been found that no provision had been made in the hospital for a baggage room of the patients, every one of whom arrived with some kind of a box from the Philippines, it was deemed best to set aside the upper room for a baggage room and to complete the basement for the quartermaster and commissary storeroom. The building is 70 by 24 feet. On entering it, two rooms opposite each other, 7 feet 10 inches by 16 feet, have been planned as mattress room, in which capacity they were not needed, and one room was converted into a storeroom for camp and garrison equipments and the other for ordnance. The other room, 54 by 24 feet, was arranged with 400 pigeonholes in ten movable cases for the storage of the minor articles belonging to patients, so as to leave the wards entirely without any baggage. The basement was arranged at one end with shelves and drawers for clothing, and at the other end, separated by a 5-foot passage, for commissary supplies, the plan being to make the general hospital entirely independent of the post in its quartermaster and commissary supplies. A staircase leads from the veranda to the entrance of the basement.

The dining room abuts on the lower veranda and connects with the main veranda by two verandas which intersect it at the center. The building is 158 by 28 feet. Within 24 feet of its end it has an L, increasing its size by 18 feet. The dining room proper is 122 feet 7 inches long with five ridge metallic ventilators and nine windows on each side and three at the end. It accommodates ten tables with twenty seats each. At the lower end of the dining room it is partitioned off into a pantry 8 by 16 feet, with sinks and shelving. A sideboard for dishes is built on the dining-room side against this partition. A passage 8 feet wide permits ingress from the lower veranda with double doors. The room forming the L, 24 by 30 feet, was designated as an officers' mess, but as the officers, unlike those in civil hospitals, do not eat from the hospital mess, this room was used for other purposes, and has been arranged for a chapel and reading room. It contains also a library contributed by friends of the soldiers.

Opposite the dining room, on the other side of the veranda, there abuts on to it the kitchen building, which was originally intended only to be finished on the level with the veranda floor. It was intended to have the bakery on the same floor, but finding that this would too much crowd the space the basement has been completed into a bakery, one corner being partitioned off for the 2,000-gallon heater which supplies all the rooms in the hospital with hot water. The kitchen building is 71 feet long by 38 feet 10 inches wide. On entering the building through a hall 8 feet wide there is on the right-hand side a scullery, 14 by 20 feet, with a large wooden sink and china closets, connecting with the hall and the kitchen by double doors. On the left-hand side, with its entry into the kitchen, is the kitchen storeroom of the same size, part of which was intended to be divided off into a cold-storage room, The kitchen proper, as originally planned, was to have milk, coffee, water, tea urns. steam kettles for soup, meat, vegetables, and eggs, which were cut off when the steam plant was originally disapproved. These will now be introduced. Meanwhile the cooking has been done on a French range extending the farther width of the room. Tables, dressers, shelves, sinks, and a dumb-waiter to the bakery complete the equipment of this room. It has two metallic vent cowls and is lighted by five windows on each side.

The next building to be considered corresponds in location to the baggage building at other end of the lower veranda. It was originally intended and designated "Detailed men's building." As there are no detailed men, and there was no provision made for a separate dining room and kitchen for the hospital corps, who are not living on the 40-cent ration, it was deemed best to put in additional rooms to complete this building. The floor on the level with the veranda has a dining room for the hospital corps, and the basement is divided into a kitchen for the hospital corps and storeroom for the general mess. This building is 72 feet 4 inches long by 25 feet 6 inches. It is entered through a 5-foot hall, on the right side being a lavatory, water-closet, and urinals, and on the left side a bathroom. These were left undisturbed. The dining room proper is 62 feet by 22 feet 6 inches, with two central metallic ventilators, and at the exterior end is divided off into two rooms, one for a pantry and one for dumb-waiter and service room equipped with necessary shelves.

Immediately in the rear of the main kitchen building is situated a building 85 by 23 feet, one end of which, 12 feet wide, was partitioned off as a mortuary, divided into two rooms of equal size.

The veranda on which all the buildings abut is 14 feet 4 inches and about 10 feet high, with roof sloping upward, which was originally covered with tar paper, but this having been found to be not durable has been replaced by tin. The basement of the veranda is closed by lattice panels of various heights. The outside of the veranda is inclosed with windows. The lower basement of the veranda has been found useful for storerooms, carpenter and paint shop, baggage room for the hospital corps, and has been divided off into a number of suitable apartments.

*The steam plant.*—As soon as I became acquainted with the climate of the Presidio I became convinced that some sort of artificial heat would be necessary to make the new hospital habitable, and I therefore urged reconsideration of the disapproval of the steam plant, which finally was approved. The use of this plant for ventilating purposes has been detailed above. In addition to this the smaller rooms will be provided with radiators on the direct method, and the dormitories of the hospital corps with direct indirect radiators and the necessary wooden aspirating flues. This steam plant by utilizing high pressure will permit the running of an ice plant, two dynamos, and the necessary laundry machinery, while the buildings will be heated by low pressure. The cost of washing done outside of the hospital has averaged $900 a month, and an equal sum was paid for electric lighting of the hospital, while the ice bill of the hospital averaged about $70 per month, and therefore this plant will effect a saving per year of $18,000 in the running of the hospital after deducting the expenses of its management:

*Medical and surgical work performed during the year.*—There were admitted during the year: State volunteers, 1,414; United States volunteers, 972; regulars, 2,198. Of the State volunteers, 9 died and 48 were discharged on certificates of disability; of the United States volunteers, 5 died and 104 were discharged for disability, and of the regulars, 52 died and 374 were discharged.

The following surgical operations were performed during the year, with two exceptions, all by myself:

| | | | |
|---|---|---|---|
| Hernia | 36 | Circumcision | 16 |
| Appendicitis | 13 | Enucleation of glands | 6 |
| Extraction of bullets | 8 | Varicocele | 10 |
| Osteoplastic operations | 12 | Amputations | 7 |
| Empyema | 2 | Abscess of liver | 1 |
| Aneurism | 1 | Carcinoma | 3 |
| Contractures | 1 | Other operations | 34 |
| Abscess | 3 | | |
| Enucleation of eye | 7 | Total | 178 |
| Hemorrhoids | 18 | | |

Of these operations 2 for hernia were performed by Col. W. H. Forwood, assistant surgeon-general, on my invitation, and 1 by Capt. H. A Shaw, assistant surgeon, United States Army.

Three cases were fatal, not, however, in consequence of the operation. One was appendicitis, which was brought after general peritonitis had set in. Another was trephining for fracture of the skull with general paralysis. (At the post-mortem the base of the skull was found fractured in addition to fractures of the dome.) The third was an exploratory laparotomy for supposed abscess of the liver; the patient did not die from the effects of the operation.

The clinical histories of these cases have been filed by hospital numbers and entered with their number on a nosological index to facilitate future investigation and research. The majority of the patients were brought by transports from the Philippine Islands, the remainder came from the volunteer camps, State volunteers on their return from the Philippines, and United States volunteers prior to their departure for foreign service.

The medical service was attended to practically by contract surgeons, who until lately were subject to frequent changes. As a rule, 1 medical officer attended to 2 wards of 40 patients each in the new hospital, and in addition these surgeons were charged with such work as attending officers' wards in the administration building, the eye and ear clinic, X-ray and photographic work, medical attendance on the hospital corps, supervision of patients' baggage room and library. The surplus of medical officers generally were assigned to duty in the various buildings occupied at the post when the capacity of the hospital proper was exceeded. The number of hospital stewards and hospital corps men employed at the hospital averaged from 130 to 150.

The number of female nurses employed at the hospital at its first occupancy was 34, which number was gradually increased to 50 and then reduced to 40 on my recommendation. The general assignment was 2 nurses for day and 1 for night duty, with such increase in detail as appeared necessitated by the number of bed cases. During the year 113 nurses have been at this hospital, of whom 69 were sent to the Pacific islands, and 10 ordered home for annulment of contract—services no longer being required—4 ordered home for annulment on account of ill health, and others transferred to various places. Thirty-six nurses have been on temporary duty awaiting orders. The conduct of the nurses has been exemplary and they have been faithful in the performance of their duties. While the number assigned appears excessive, and the nurses were not at all times occupied, it is believed that their mere presence in the wards was of great value in keeping up propriety of conduct on the part of the patients. The service for the sick was no doubt performed with greater exactness than would have been the case with members of the hospital corps, who, during the Spanish war and subsequently, were not selected with the care which could be given in peace times.

The part of this report pertaining to general organization was prepared at my request by Capt. H. A. Shaw, assistant surgeon, United States Army.

*Organization of the hospital.*—The administrative staff of the hospital consists of the following heads:

(1) Record officer.
(2) Property officer.
(3) Mess officer.
(4) Admitting physician.
(5) Officer of the day.
(6) Ward officer.
(7) Officer in charge of patients' property.
(8) Officer in charge of preparation of disability certificates.
(9) Officer in charge of detachment of hospital corps.
(10) Officer in charge of clinical records.
(11) Pathologist.
(12) Chief nurse.

This report is intended to give an outline of the work done in each department and the methods by which it is accomplished. The number of departments under the control of a single officer varies with the number of officers on duty. With the departments well organized and under competent stewards and clerks, the executive officer of the hospital should manage the departments of records, property, and mess, and command the hospital corps. The officer of the day is detailed by roster. One ward officer, in addition to the care of 80 to 100 patients, should take the department of patients' property; another ward officer the preparation of disability certificates and the clinical records. The pathologist for a general hospital should be selected with reference to that particular line of work. In a large general hospital his time will be fully occupied in making routine examinations of blood, urine, feces, post-mortem material, etc., so that he should never be called upon for ward work or other duty which would take him away from the laboratory.

*Record officer.*—This officer supervises the preparation of the official papers pertaining to patients. His chief clerk is a hospital steward, who directs the work of the record office, and is assisted by clerks whose duties are as follows: One clerk in charge of the post return; 1 in charge of the report of sick and wounded; 1 in charge of the preparation of final statements and the file of descriptive lists; 1 in charge of letters-received book; 1 in charge of letters sent; 1 in charge of the preparation of the consolidated morning report of patients; 2 clerks in charge of the preparation of muster rolls, pay rolls, and clothing schedules (one of these clerks is in charge of the card index of patients' records); 1 clerk in charge of preparation of certificates of disability.

The most important single report made in the record office is the "Consolidated morning report of patients," for upon its accuracy in every detail depends the correctness of the post return, and if this report is unreliable no dependence can be placed on the official returns from the hospital. This report is made upon the following form:

*Consolidated morning ward report.*

U. S. ARMY GENERAL HOSPITAL,
*Presidio of San Francisco, Cal., ............., 1900.*

| | | | | | | | | | | | | | | | | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | Strength. | | | | Present and absent. | | Alterations since last report. | | | | | | | | | | | | | | | | | | | |
| | | Absent. | | | | | Gains. | | | Losses. | | | | | | | | | | | | | | | | |
| | | | | | | | | | | Discharged. | | | | | Transferred. | | | | | | | | | | | |
| Wards. | Patients present. | On furlough. | Without leave. | | Aggregate present report. | Aggregate last report. | Original admission. | Transfers (ward). | | Expiration of service. | For disability. | By order. | | | To duty. | A. & N. | A | | | | | | | | | | | | | | | | | | | | | | | | | | |
| B | | | | | | | | | | | | | | | | | | | | | | | | | | |

The data for this report come from two independent sources: First, from the ward; and second, from the officer of the day. Each ward reports to the record office at 9 a. m. daily the changes which have occurred in that ward for the twenty-four hours previous to 7.30 a. m. of that day, on a form with headings similar to those of the consolidated report, the changes being given also by name and organization.

*Morning report of patients.*

Ward ...... ............., 1900.

Name of ward master or nurse preparing report: ............

| | | | | | | | | | | | | | | | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Strength. | | | | Present and absent. | | Alterations since last report. | | | | | | | | | | | | | | | | | | | |
| | Absent. | | | | | Gains. | | | Losses. | | | | | | | | | | | | | | | | |
| | | | | | | | | | Discharged. | | | | | Transferred. | | | | | | | | | | | |
| Patients present. | On furlough. | Absent without leave. | | Aggregate present report. | Aggregate last report. | Original admissions. | Transfers (ward). | | Expiration of service. | For disability. | By order. | | | To duty. | A. & N. Gen. Hospital. | Government Insane Asylum. | Fort Bayard. | Wards. | | Died. | Deserted. | Escaped. | Discharged soldiers left hospital. | Civilians left hospital. | Vacant beds. |
| | | | | | | | | | | | | | | | | | | | | | | | | | |

Printed directions for making up the morning ward report are posted in the ward register, as follows:

"Carry forward from previous report the number reported in column 'aggregate present report' and place this number in column 'aggregate last report.' Enter all gains and all losses in proper columns. Add total gains to 'aggregate last report,' and subtract total losses, placing remainder in column 'aggregate present report.' Enter in proper columns the number absent on furlough and absent without leave and subtract the total absent from 'aggregate present report,' placing remainder in column 'patients present.' All the above entries are to be made by reference to the ward register, which should contain all the necessary information. All changes will be reported by name and organization. Enter first original admissions, then transfers (ward), and follow with other changes in the order named in report. Every change will be headed with the designation of the gain or loss, as—

*Original admissions.*

1. Smith, John, pvt., E, 13th Inf.; 25; W; Mass.; 3¼; *Sheridan.*
2. Stevens, James, cpl., I, 9th Cav.; 31; C; Miss.; 10½; command.

*Lost by transfer.*

1. Rice, John J., to ward C.

*Discharged for disability.*

1. James, William C., pvt., B, 23d Inf.

*Gained by transfer.*

1. Wright, James J., pvt., A, 3d Art., from ward B.

*On furlough.*

1. Williams, George J., pvt., B, 6th Inf., till May 4, 1900.

"In the column for remarks note, in cases of 'original admission,' the age, race, birthplace, years service, and source of admission (in the order named); in cases received by transfer from other wards, the ward *from* which transferred; in cases returned to duty, whether in 'duty in United States' or 'full duty;' in cases transferred to other wards, the ward *to* which transferred; in case of death, cause and hour of death.

"When a patient is discharged from the service and remains in hospital, he should be dropped as an enlisted man and taken up on the same report as an original admission, and carried on the ward register as a discharged soldier.

"When a patient on furlough fails to return to the ward at the expiration of his furlough, he will be dropped from the column 'On furlough' and taken up in column 'Absent without leave,' with appropriate remarks as 'Smith, Thomas, private, B, 6th Infantry, from on furlough to absent without leave.'

"When a patient returns from furlough, he will be dropped from the column 'On furlough' and taken up in column 'Patients present' with appropriate remark below."

The officer of the day reports to the record office daily the names of all patients admitted for the twenty-four hours preceding 7.30 a. m. of that day, on the following form:

*Admissions for twenty-four hours.*

[U. S. Army General Hospital, Presidio of San Francisco, Cal.]

Ending 7.30 a. m............, 1900.

| Name. | Rank. | Company. | Regiment. | Age. | Birthplace. | Years service. | Ward. | Hosp. No. |
|---|---|---|---|---|---|---|---|---|
| 1. ............................ | | | | | | | | |
| 2. ............................ | | | | | | | | |

Departures are reported on a similar form.

These two reports (from the wards and from the officer of the day) are carefully compared by the clerk compiling the consolidated report, and if found to correspond the one with the other, the consolidated report is made accordingly—for instance, if the officer of the day's report shows John Smith admitted to ward A, the ward officer of that ward should report him as taken up as an "original admission," and similarly if the ward officer of ward B drops James Allen as "returned to duty," the officer of the day should report him in the list of departures. This double check on admissions and departures has been found absolutely necessary to prevent error. When the morning report is completed and signed by the executive officer and the commanding officer, it is passed to the clerk in charge of the report of sick and wounded, who enters on his register the names of patients admitted and the particulars as to those disposed of, checking each name in the column prepared for the purpose. (This clerk also enters on the officer of the day's report "Admissions for twenty-four hours" in the proper column the hospital number of each patient. This report is then returned to the officer of the day who enters the hospital number on the bed cards and index cards.) The consolidated report then goes to the clerk in charge of the card index who enters the data on the individual cards, making a check against each name and reporting any discrepancies as compared with the cards that he may observe. The morning report is next passed to the clerk in charge of descriptive lists, who obtains from it the names of men disposed of in order that he may make proper disposition of the descriptive lists.

In order to facilitate ready reference to a patient's record and also to diminish as far as possible liability to error in the keeping of the various records, the card-index system has been introduced. The complete record of each patient, so far as it pertains to medical status, pay, clothing, court-martials, correspondence, etc., is recorded on a card prepared for the purpose, properly indexed and filed.

When patients are to be discharged from the service or transferred to other hospitals, the ward officer is informed of the fact by notification from the record office on the following blank:

U. S. ARMY GENERAL HOSPITAL,
*Presidio of San Francisco, Cal.*,
............., 1900.

The following-named patients will be discharged from this hospital on............and their names will be dropped on the morning ward report of............ They will be sent in charge of the ward master to report to the officer of the day at 10.30 a. m.............with a *disposition slip* signed by the ward officer.

| Surname. | Christian name. | Rank. | Company. | Regiment. | Ward. | Authority for discharge. | Signature of ward officer or head nurse, ward master. |
|---|---|---|---|---|---|---|---|
| | | | | | | | |

The property officer is charged with the care and accounting of public property. The following general order has been published in regard to this subject:

### PUBLIC PROPERTY, ITS CARE AND ACCOUNTABILITY.

"In order to protect the public property at this hospital from loss and unnecessary damage, medical officers will be required to receipt to this office for all property in that part of the hospital over which they have control. These receipts will be made upon a prescribed form and will be rendered when the officer first assumes charge of the property. Careful distinction will be made between medical and quartermaster property, each being receipted for on a separate blank.

"Each ward will be supplied with a property book, in which will be entered all articles of public property, proper notation being made of all articles received and all expended or lost.

"Whenever public property is issued from this office, it will be accompanied by an invoice signed by the property officer and by a receipt for the signature of the receiving officer, who will, after personally verifying the property, return the receipt to this office.

"If a transfer of property is ordered from one building to another, the issuing officer will prepare invoices and receipts in duplicate; one invoice and both receipts will be sent to the receiving officer, the other invoice to the property officer. The receiving officer will sign both receipts, sending one to the issuing officer and one to this office. Any discrepancy will be reported.

"All property received by issue from this office, by transfer, or found in ward, as well as all property issued by the officer, lost or destroyed, will be duly accounted for in the property book and also on the form 'Statement of property.' This form will be rendered to this office on the last day of each month, showing the dates of receiving and of disposing of all property during the month. In addition, a 'Statement of losses' will be rendered at the same time.

"Each ward officer will require his wardmaster to verify all public property in the ward on the 10th and 20th of each month. The ward officer will make a personal check of the property at the end of the month. All losses of or damage to public property will be promptly reported to this office. So far as possible, damaged property will be exchanged for that which is serviceable, in which case no invoice or receipts will be exchanged. When property is turned in to this office, the property officer will give his receipt to the responsible officer.

"Public property which has been placed in wards, offices, or other rooms of this hospital will not be removed except by direction of the commanding officer."

The blanks used in connection with the above order are these:

*Ward Officer.*

The admitting physician is the officer of the day. His duties are prescribed in the following general orders:

"The detail for officer of the day will be made by roster. His duties will begin at 9 o'clock a. m., and will continue during the succeeding twenty-four hours. He is the admitting physician of the hospital, and will examine all patients admitted and all discharged during his tour. Each patient admitted will be provided with an admission slip signed by the officer of the day. This slip will show the name, rank, company, regiment, age, birthplace, and years of service, as well as the ward to which he is assigned. It will be given to the head nurse of the ward, and the information will be copied in the ward register and also on the next morning ward report. The officer of the day will examine the ward papers of each patient sent to him for discharge, which should comprise (1) clinical history of patient, (2) disposition slip. He will see that these papers are duly signed by the ward officer, adding his name to the disposition slip as evidence that he has examined the patient and has found that the proper papers have been sent in by the ward officer.

"The officer of the day will not be held for the correctness of these papers.

"The officer of the day will keep a list of all admissions and departures, which he will sign before 7 a. m. and send to the record office.

"The officer of the day will inspect all the wards of the hospital at least once before 7.30 p. m., and all the wards of the new hospital between midnight and reveille, receiving a verbal report from the night nurse in each ward. He will inspect the guards at the door of the administration building and at the rear of the hospital at these times, receiving their reports, noting whether or not they are familiar with their duties.

"The officer of the day will make a written report to the commanding officer in regard to the condition of the wards, the general sanitary condition in and about them, together with the number of patients admitted and discharged during the day.

"The officer of the day will be present at reveille roll call of the hospital corps on the rear porch of the administration building, receiving the report of the steward in charge. Absentees will be reported to the commanding officer.

"The officer of the day at this hospital will in future confine himself to the limits of this reservation during his tour of duty. He will be found on duty in his office between the hours of 10 and 11.30 a. m. for the purpose of inspecting patients who are sent from the hospital. Ward officers will not send to the officer of the day patients for disposition except between the hours of 10 and 11 a. m. At other hours than those above mentioned the officer of the day will be found in his office, except when attending the necessary duties of the officer of the day and those in connection with his wards. The officer of the day will not exchange his tour with another officer except by authority of the commanding officer.

"Upon the arrival of patients in wards the officer of the day will send bed cards and index cards to the ward officer who will, without delay, fill them out in all possible particulars and return them to the officer of the day.

"The greatest care will be exercised that the spelling of names, the designation of organizations, and all other entries on the cards be correct in every particular."

The "Admission slip:"

*Admission slip.*

U. S. A. GENERAL HOSPITAL, PRESIDIO, S. F., CAL.

..........................................................................

..........................................................................

These cards are filled out in the ward and not in the office of the officer of the day for the following reason: Patients are usually received at this hospital in large numbers and at comparatively infrequent intervals. If the work of carding them is divided up among twelve or fifteen wards, a complete file of admissions can be obtained in a very short time, and this is an important consideration in a hospital near a large city, where visitors come in crowds with each arriving transport, asking for information.

The "bed card" for each patient is filled out in the ward immediately after his arrival, and is sent at once to the officer of the day, who enters the hospital number and returns it to the ward.

U. S. ARMY GENERAL HOSPITAL.

PRESIDIO OF SAN FRANCISCO, CALIFORNIA.

**Ward**...... **Bed No**...... **Hospital No**......

**Name** ..........................................................................

**Rank** ..............................**Co**......**Regt** ...............................

**Admitted** ........................................................................

**Discharged**.....................................................................

The duties of the guard are prescribed in the following general order:

"1. The guard on duty at the administration building will confine himself to the immediate vicinity of the front door. He will refuse admittance into the hospital of all unauthorized persons. Visitors will be taken to the officer of the day to receive a pass before being allowed to leave the administration building. The guard will not allow patients to leave the hospital without a pass. All enlisted men returning from pass will enter the hospital by the door of the administration building and will surrender their passes to the guard, who will note the hour of return and turn in the pass to the officer of the day.

"The guard on duty at the rear of the hospital will be found in the immediate vicinity of the boiler room when not on other duty connected with this detail. He will keep the boiler in good working order and the room clean. At night, between 6 p. m. and 6 a. m., he will make rounds at least once every two hours, trying all doors in the buildings in rear of Wards E and F, and will see that the windows and doors are closed and have not been tampered with. He will lock the gates of the hospital at retreat and unlock them at reveille, and will prevent patients and other persons from leaving the hospital in any unauthorized way.

"Guards will keep a sharp lookout for fire and will at once notify the officer of the day in case of its discovery."

The ward officer, in addition to his professional duties, makes the following reports:

1. A "Morning report of patients," on the printed form already referred to.
2. A weekly report on the following form:

*U. S. Army General Hospital,*
*Presidio of San Francisco, Cal.,*
............., *1900.*

Ward .......

The following-named enlisted men are, in my opinion, fit subjects for discharge or transfer, as noted below:

| Surname. | Christian name. | Organization. | Remarks: State whether discharge on surgeon's certificate of disability, transfer to Fort Bayard, or transfer to Hot Springs is recommended. |
|---|---|---|---|
| | | | |

................., *Ward Officer.*

NOTE.—This report will be made at 10 a. m. on Monday of each week to the executive officer. If the ward officer has no case for such disposition, he will so report on this form. Form 1-73.

3. A "Monthly statement of property" and "Statement of losses" on the prescribed forms.

He keeps the following records in his ward:

1. "Register of patients." This shows on the successive pages of a book from day to day the names of each patient in the ward, the organization to which he belongs, the date of admission, and upon his departure from the ward the method of disposition.

2. A "clinical history" of each patient. The following circular has been issued regarding the preparation of this history:

"Ward officers will exercise especial care that the form for the clinical record be complete before sending it to the office for file. When a patient leaves the hospital, there should be a clear and concise history of the case, giving dates as nearly correct as can be obtained, such for example as the date of arrival in the Philippine Islands, of any attack of illness after arrival with its duration, the date of onset of the present attack, that of departure for the United States, etc.

"After admission to this hospital, notes will be entered on a sheet headed, 'Progress of the case,' at sufficiently short intervals of time, from a day to a week, according to the case, to give at any point in the course of the disease a comprehensive exposition of the conditions present. Printed forms are provided for clinical histories, showing temperature, pulse, and respirations, and for pathological reports, such as examination of sputa, feces, urine, etc.

"When a man is transferred from one ward to another, the ward officer making the transfer will make the note in the 'Progress of the case,' 'Transferred from ward ...... to ward ......,' and append his signature.

"When a man ceases to be an inmate of the hospital, the ward officer will see that the date and manner of disposition and the condition of the patient at this time are entered on the form for clinical history and that the form is signed; only the signature of the officer last in charge should be found on this sheet, that of others who may have attended the case appearing under a note of transfer."

The diagnosis of each patient is reported to the record office, as soon as it is established, on the following form:

*Diagnosis card.*

Ward...... Hospital number......

Surname. Christian name.

..........................................................................................

Rank. Company. Regiment.

..........................................................................................

Diagnosis or complication. (Erase either not required.)

In line of duty—Yes or No.... ................

*Ward Officer.*

Date............1900.

NOTE.—The diagnosis, signed by the ward officer, will be reported on this slip to the record office as soon as established. This form is also used for any change in diagnosis or any complication, which should be reported at its occurrence.

3. An "order book," in which the ward officer enters all orders, prescriptions, etc., pertaining to patients.

4. Report of the night nurse.

5. "Ward property book." In this book is kept a record of all articles of medical and quartermaster property for which the ward officer is responsible, due account being made of all property received and all disposed of during each calendar month, when a return is made to the property officer on the form "Statement of property."

When a patient is transferred from one ward to another, the following blank is used:

*Transfer slip.*

U. S. A. General Hospital,
*Presidio, California*, ............, *1900.*

| | |
|---|---|
| Surname. | Christian name. |

| | | |
|---|---|---|
| Rank. | Company. | Regiment. |

This patient will be *transferred* from ward ...... to ward .......

................,
*Ward Officer, Ward* .......

Received:

................,
*Head Nurse, Ward* .......

This slip, signed by the ward officer, will be sent with the patient to the new ward, where it will be signed by the head nurse; after entering the data on the ward register, she will send the slip without delay to the officer of the day.

The officer in charge of the surgical ward keeps a record of each surgical operation in a book prepared for the purpose.

Each ward officer has the following assistants: One head nurse and two or three assistant female nurses; one wardmaster; one ward attendant (male) for day duty; at night, one female and one male nurse. This is the usual allowance for a ward of 40 beds.

The head nurse is responsible for the proper execution of all orders she receives regarding the care and treatment of the patients in her ward. She divides the patients into sections and appoints an assistant nurse for the care of these. She prepares the morning ward report of patients and has charge of the clinical histories of the cases.

The duties of the wardmaster are prescribed in the following general order:

"1. The wardmaster is charged with the care of the public property in the ward. In order to prevent loss, he will become familiar with the articles of property with which he is charged by reference to the ward-property book, and will on the 10th and 20th day of each month make a check of all property in the ward, reporting to the ward officer all articles missing and all in excess, as shown on the property book.

"Public property in the tea kitchen will be under the direct control of the head nurse of the ward, who will hold the key of the room and will report any loss of property to the wardmaster. She will be present on the days when the property is checked, assisting the wardmaster in locating it. The key of the tea kitchen will at night be held by the night nurse.

"The wardmaster will keep in his possession the key of the linen room, except when he is necessarily absent from the ward; he will then turn it over to the head nurse or night nurse, as the case may be. The room will be kept locked at all hours.

"The wardmaster will take charge of all clothing not in use belonging to patients in his ward. This he will take to the property room, receiving a receipt therefor from the officer in charge. Overcoats of convalescent patients will be kept in the linen room of the ward, each being tagged with the name and organization of the owner. Care will be taken that no overcoat is removed by anyone not the owner.

"The wardmaster will be held responsible for the police and sanitary condition in and about his ward. To this end he will, with the approval of the ward officer, detail patients for such light duty as they are able to perform.

"The wardmaster will present himself in the diet kitchen in time to take the diet orders to his ward. He will before taking away his carriage check its contents with his retained list of orders. He will, under the supervision of the head nurse and with the assistance of ward attendance, distribute the food.

"In case of the death of a patient in the ward, the wardmaster will immediately secure all his effects, including those in property room, making an inventory of them, which will be verified and signed by the ward officer. The articles will then be stored in the linen room until final disposition is made.

"Ward linen which becomes soiled during the day will be collected in the laundry room under the ward. The wardmaster will make a list of all these articles on Form 10, taking them to the laundry building between 9 and 9.30 a. m., where they will be exchanged by the steward in charge for the same amount of fresh linen. All articles which have become worn and unfit for use will be sorted out and reported to the steward in charge as unfit for service."

An officer is detailed in charge of patients' property. Patients' private effects are kept in a storeroom with lockers prepared for the purpose. Each patient on depositing property receives a tag showing his name, organization, and a brief description of the property. The duplicate of this tag, with corresponding number, is filed in an index in the care of the storekeeper.

When a patient dies in hospital, the ward officer collects his effects and makes an inventory of them, which he sends to the executive officer on a prescribed form.

The personal effects of deceased soldiers are kept in the ward property room. When these are to be packed for shipment, the following blank is used for the protection of all concerned:

U. S. Army General Hospital,
*Presidio of San Francisco, Cal*................1900.

The ward officer of ward......will turn over all the effects of................
..............................................................................
deceased, to the man in charge of the property room, who will check them from list furnished herewith and box them for shipment to ....................
..............................................................................
at ...........................................................................

.................,
*Capt. & Asst. Surgeon, U. S. A., Executive Officer.*

---

U. S. Army General Hospital,
*Presidio of San Francisco, Cal*................1900.

I have this day boxed the effects of the above-named man and find them to agree with the list furnished me.

.................,
*Private, Hospital Corps, U. S. A.*

The necessity of exercising the greatest care in the preparation of certificates of disability is so apparent that an experienced officer has been appointed to examine carefully each case recommended for discharge and then to supervise the completion of the papers of suitable cases. Ward officers make recommendations for discharge on surgeon's certificate of disability on a form already shown.

The officer in charge of the detachment of the Hospital Corps is responsible for the discipline of his command. His duties correspond largely to those of a company commander.

The officer in charge of clinical records inspects the record of each patient on the day following his discharge from the hospital, and when necessary returns it to the ward officer for immediate correction. The record is then filed with the others in numerical sequence of hospital numbers, regulars and volunteers being in separate files.

The pathologist keeps in books prepared for the purpose a record of every examination made in the laboratory, making a duplicate report to the ward officer in each case. He makes a weekly report to the commanding officer of the hospital regarding the work done in the laboratory.

The following regulations in regard to the work of the bacteriological laboratory have been published:

"*Examination of blood.*—The blood of every patient admitted to this hospital is to be submitted to the pathologist for examination. If nothing abnormal is found, the first examination will be considered sufficient unless a request is made for another by the pathologist or by the medical officer in charge of the case. Where the malarial plasmodium or any other abnormal condition is found, the blood is to be reexamined as often as the medical officer in charge of the case considers necessary.

"*Examination of urine.*—The urine of every patient admitted to the hospital is to be examined at least once; in cases which show no pathological condition of the urine, and which are not bed patients, the urine is not to be again examined unless requested by the pathologist or by the medical officer in charge. In pathological urine, and in the case of all bed patients, the urine is to be examined once a week unless in case of emergency a more frequent examination is considered necessary by the medical officer in charge of the case.

"*Examination of sputum.*—The sputum of every case showing pulmonary symptoms or in which a diagnosis of tuberculosis has been made, will be submitted for examination as often as the medical officer in charge of the case directs, or the pathologist requests.

"*Examination of feces.*—The feces of every case suffering from chronic diarrnea or dysentery will be submitted to the pathologist for examination at least once, and as often thereafter as he or the medical officer in charge may direct.

"*Use of examination blanks.*—A combined pathological blank which is attached to the clinical history is to be filled out for the first examination of each case; requests for reexamination should be made out upon a separate blank furnished for that purpose, which may be obtained at the laboratory.

"Wherever possible the clinical diagnosis will be verified by the pathologist, as in cases of pulmonary tuberculosis, malaria, amœbic dysentery, etc., and wherever such confirmation can not be obtained the fact will be stated on the diagnosis card.

"The pathological blank must be filled out and be accurate in every detail before being sent to the pathologist, special attention being paid to remarks concerning previous attacks of typhoid or malarial and as to clinical diagnosis and prominent symptoms. The report, when returned to the ward officer, should be filed with the clinical history.

"Specimens of urine, feces, sputum, etc., must be accompanied by the proper slip securely fastened to the bottle so that identical cases may be assured; these will be sent to the laboratory not later than 11 o'clock a. m., except in cases of emergency.

"All cases entering this hospital with a diagnosis of malarial fever, malarial cachexia, or in which malarial infection is suspected, should not have the blood examined until at least a week has elapsed after entry, unless active symptoms are present before that time. Quinine should not be administered to any such case until the blood has been examined and the diagnosis confirmed by the pathologist, except in pernicious cases, or where for some complication quinine is necessary.

"The chief nurse is charged with the duties usually devolving on the superintendent of nurses in civilian hospitals. She renders to the executive officer a daily report, 'Morning report of female nurses.'"

[*] All changes to be accounted for by name in this space, together with number, source, and date of order.

The mess department of the general hospital is under the supervision of a mess officer, who has under his immediate charge 1 hospital steward, 1 acting hospital steward, 4 civilian employees, and 27 privates of the Hospital Corps. It includes all kitchens and dining rooms for patients and for the Hospital Corps, the bakery, and supply storeroom.

Diets for patients are prepared in two kitchens according to an established bill of fare (General Orders, No. 28, July 13, 1900, being the latest diet table formulated for use at this hospital). In addition a daily order list of special diet with a supplementary list is provided for the use of ward surgeons for special cases. Copies of full and light diet table, special diet, diet order, and daily order lists are appended.

The following full and light diet table has been adopted as the standard of diet; it displaces a diet table of earlier date, a change in the table having been found advisable:

### General Orders, No. 28.

United States Army General Hospital,
*Presidio of San Francisco, Cal., July 13, 1900.*

The following full and light diet tables are hereby ordered for this hospital and will be adhered to as far as practicable. Deviations must be reported by the cook to the officer in charge of the kitchens. General Orders, No. 21, December 28. 1899, is hereby revoked.

................, *Ward Officer.*

Fresh fruits, apricots, peaches, plums, pears, berries, etc., will be furnished on this order, as required, during season. Orders for berries must be given 24 hours in advance.

This blank will be filled out each day with number and quantity of various articles wanted and will be sent to the steward in charge of the storeroom.

There are two kitchens for patients. The kitchen at the general hospital contains a large double French range for cooking, a large hot water tank is connected to it, giving the kitchen and scullery connected therewith a supply of hot water independent of source of general supply for the hospital. A diet pantry and storeroom is attached, and an elevator, recently added therein, conveys bread from the bakery below, as required for use in this kitchen and dining room. A number of improvements are now being made, by the installation of a complete set of steam kettles for meats and vegetables and a set of urns on a steam table for coffee, tea, hot milk, and water. In the vegetable and meat basement connected with this kitchen a cold storage room has recently been added which will enable the hospital to preserve its foods at a moderate cost. All diets that may be required for patients (full, light, and special) are prepared in this kitchen. They are sent to the wards in special rubber-tired carts designed for this purpose. The food being placed on trays and covered with vessels, a door being provided in each cart, further prevents loss of heat from food while being conveyed from kitchen to ward.

An acting hospital steward is in immediate charge of the kitchen and dining room connected therewith, and a force of 9 men, 7 privates of the Hospital Corps, and 2 civilians are employed. Their duties are as follows: The chief cook cuts all meats and generally supervises the preparation of all foods. He requires from the storeroom each morning before 9 o'clock the articles of food wanted for the next twenty-four hours. Second cook makes puddings, custards, broths, etc., and prepares all light diets. Third cook prepares all meats and potatoes and assists in general cooking at range. Fourth assistant prepares vegetables, does broiling of steaks, and attends to short orders. Fifth assistant prepares coffee, tea, or cocoa; also attends to policing and care of vegetable storeroom and carries fuel for ranges. Sixth and seventh assistants are pan and dish washers at sink. Eighth assistant, general police and at sink; attends to police of woodwork and window cleaning, also assists in the preparation of vegetables. Ninth man in charge of diet pantry; consolidates diet orders from wards to special blanks for the information of the chief cook in preparing diets; keeps accounts of articles of food used from diet pantry; reports to chief cook articles of food required in diet kitchen each day; supervises the placing of food in ward carts, being responsible that no error occurs, also care and police of kitchen storeroom.

The forms below are those used in kitchen. The daily order list is used as a requisition on mess storeroom for such supplies as are required during the day. On the diet calendar is copied all data from the diet orders and special diet lists from each ward, with the object of giving the chief cook the orders for the day in consolidated form for ready reference.

|---|---|---|---|---|---|---|
| A | | | | | | |
| B | | | | | | |

In the patients' dining room and scullery connected therewith, five privates of the hospital corps and as many convalescent patients as may be required, are employed. On account of distance of kitchen from dining room and the size of the dining room itself, it is desirable to have two men wait at each table; this to avoid any delay in supplying the wants of patients. The food is brought from the diet kitchen to the dining room in carriers, and is then distributed. The dining room contains 10 tables, with a capacity of 20 patients to each table; the number of tables could be readily increased to 14 should the requirements of the hospital necessitate this increase. Hours for meals are as follows: Breakfast, 7.30 a. m.; dinner, 12.30 p. m.; supper, 5.30 p. m. The doors of the dining room are opened at the sounding of mess call. Each patient as he passes in presents a meal ticket to an attendant stationed at the door for this purpose. These tickets are counted and the wards checked after each meal. The number of tickets received from each ward is entered on the attached form, which is then compared with the number of patients reported for mess hall on the diet orders of the respective wards. A check is thus maintained and the surreptitious feeding of expatients and others, a standing evil which is always to be contended against, is prevented.

.................

*Lance Actg. Steward U. S. A., in charge of Dining Room.*

This slip to be turned in to the mess office after each meal.

The kitchen for the patients treated at the brick and wooden barracks, used as adjuncts to the hospital proper, is a company kitchen converted to use of the hospital. Food for 75 to 200 patients is prepared here. Its use as a diet kitchen is not thoroughly satisfactory; the cook range being too small for the requirements, as well as the kitchen itself. Only articles of full diet are prepared here. In it one civilian as cook and three privates of the hospital corps are employed. The cook is assisted at the range by a private of the hospital corps; two additional privates of the hospital corps attend to the general policing of the kitchen and basement connected therewith, the preparation of all vegetables and washing of dishes in use in the kitchen. They are assisted by such convalescents as may be required from time to time. One private of the hospital corps is in charge of the dining room; to assist him in his duties a number of convalescent patients are daily detailed. A convalescent meal ticket is used at this dining room with the same check system as at the new hospital.

The bakery employs one civilian as chief baker, with a salary of $50 per month, and one private of the hospital corps. All bread consumed by patients, hospital corps and female nurses, is made at the hospital bakery. Since its opening, August 10, 1899, 120,720 loaves of bread, at an average cost of 1.36 cents per loaf, have been baked and issued. Bread is issued from 7.30 a. m. to 8.30 a. m., and from 3.30 p. m. to 4.30 p. m. Issues are made by the baker on an order signed by the man in charge of dining room or kitchen. They are turned in to the mess storeroom each evening by the chief baker, who renders a report at this time on the amount of flour used and number of loaves of bread baked and issued during the day. Supplies are furnished to the bakery from the subsistence funds for patients, from the hospital corps and female nurses, in amounts proportionate to the cost of bread consumed by each organization. No savings are made from flour in bakery, and there are no bakery expenses except those for actual manufacture of bread, the civilian baker employed being paid by the Medical Department.

To supply the diet kitchen a general subsistence storeroom is kept and is under the immediate charge of the mess steward. All subsistence supplies for kitchens and wards are received and issued here. One lance acting steward and two privates of the hospital corps are employed in connection with this storeroom. A market wagon makes daily trips to the city for butter, eggs, and fruit. Supplies are purchased from the commissary of the general hospital and from various firms in San Francisco as required.

Bids are requested from firms for the various articles needed at short intervals. The supplies are received and checked from the bills delivered by merchants and at the close of each day are entered upon a daily report of expenditures, said report showing the total amount expended for the day.

*Daily report of expenditures for mess.*

| On hand to be acc't for ............... | | | | | | | | | | | | | | |

Certain articles of diet not requiring preparation (milk, crackers, jellies, etc.), are issued to wards direct from this storeroom. Milk is required for by wards, direct to the storeroom on daily order lists. As these lists are received in the storeroom the amount of milk asked for thereon is entered in a designated column on a form "daily milk account," the total amount plus a small extra quantity for emergencies being taken.

*Daily milk account.*

| | | | | | |
| B | | | | | |

Issues are made on daily order lists signed by ward officers who designate the articles required for their patients. The number of patients in the ward is entered on the list. After issue the price of each article is entered and the total cost of issues with the number of patients for whom required entered on a card bearing name of ward and which has daily entries of cost per ward and number of patients therein for each month. The cost of articles issued to kitchens is also charged daily against each kitchen.

Articles after issue are entered on an abstract of issue roll which is completed and compared with the abstract of receipts on the last day of each month. An inventory of supplies on hand is then taken and the account closed for the month.

Experience has shown that under a system of fixed-diet table, special-diet table, and extra-order lists for ward use it is necessary to maintain a storeroom, keeping therein at least three days' supply of such nonperishable articles as may be required. Without such a storeroom a sudden contraction or expansion in the number of patients causes a financial stringency. The amount allowed, 40 cents per patient, is not sufficient for a sudden increase of patients requiring special diets, unless the regular-diet table is reduced at each influx; likewise it is not sufficient if the number of patients drop to 200 or below with a large number of special diets remaining as is usual. To obviate a continual change of diet tables, thereby enabling the maintaining of one standard of diet, a storeroom with supplies for 500 patients for three days must be maintained.

A storeroom renders an exact account of stores received possible. The receipt of stores direct into kitchens for immediate use is prone to cause confusion and errors and is detrimental to any attempt to systematize the accounts of a mess intelligibly.

The Hospital Corps is fed from a separate kitchen and a separate dining room. Four privates of the Hospital Corps are employed in the kitchen, one as cook, one as assistant cook, two as general police and in the preparation of vegetables. The dining room for the Hospital Corps is above the kitchen, the food being sent to dining room from kitchen by means of a small lift. In the dining room three privates of the Hospital Corps are on duty. About 125 Hospital Corps men are fed here on an average.

U. S. ARMY GENERAL HOSPITAL,
*Presidio of San Francisco, Cal.*

The following bill of fare is hereby ordered for the Hospital Corps and will be adhered to as far as practicable. Deviations must be reported by the cook to the officer in charge of the kitchens.

The hospital fund has no source of revenue at this hospital, except from savings of rations and such small sums as may be gained from the feeding of sick officers who are messed from the kitchen of the Hospital Corps. In this the Hospital Corps detachment on duty at this hospital is under a decided disadvantage as compared with company organizations and post hospitals who enjoy the advantages of such benefits as accrue to hospital and company funds by a well-directed post exchange.

## REPORT ON THE WORK DONE IN THE BACTERIOLOGICAL LABORATORY OF THE UNITED STATES ARMY GENERAL HOSPITAL, SAN FRANCISCO, CAL., BY ACTING ASST. SURG. CHARLES F. CRAIG, PATHOLOGIST TO THE HOSPITAL.

I have the honor to submit a report of the work done in the bacteriological laboratory of this hospital for the period July 1, 1899, to June 30, 1900.

Prior to October 4, 1899, when I took charge of the routine pathological work of the hospital, the following examinations had been made by Acting Assistant Surgeon Ames:

Total number to October 4, 1899, 614, divided as follows:

1. Examinations of blood, 256. Of these examinations 91 gave a positive reaction to the Widal test and 15 proved positive for the malarial parasites. Of the 15 positive malarial cases 11 showed the tertian parasite, 3 the æstivo-autumnal parasite, and 1 the quartan parasite.
2. Examinations of urine, 132.
3. Examinations of sputa, 87. Of these, 16 showed the presence of the tubercle bacillus.
4. Examinations of cultures for Klebs-Lœffler bacillus, 65. Of these, 32 proved positive.
5. Examinations of fæces, 30. Of these, 6 showed the presence of the amœba coli.
6. Miscellaneous examinations, 44.

Of the 91 positive Widal tests a large number were reexaminations.

From October 4, 1899, when I was assigned to duty here, to June 30, 1900, the total number of examinations made has been 5,574. These examinations may be divided as follows:

| | |
|---|---:|
| A. Examinations of blood | 2,464 |
| B. Examinations of urine | 2,071 |
| C. Examinations of sputa | 496 |
| D. Examinations of fæces | 313 |
| E. Examinations of cultures | 46 |
| F. Examinations of post-mortem material | 159 |
| G. Miscellaneous examinations | 25 |
| Total | 5,574 |

(A) Examinations of blood. These may be divided as follows:

1. For the parasites of malaria and leucocytosis, 1,891.
2. For the Widal test, 561.
3. For the estimation of the number of blood cells, 12.

1. Of the 1,891 examinations of the blood for the parasites of malarial fever, 264 proved positive and 1,627 negative. This large negative result is due to the fact that the blood of every case admitted to the hospital is examined whether malarial fever is suspected or not. Hardly any of the negative cases were diagnosed as malarial fever, although many had been diagnosed as "malarial cachexia;" but repeated examinations of the blood of most of these cases resulted negatively, and the cases were found to be suffering from chronic dysentery or diarrhea.

Of the 264 positive cases 134 were found to be infected with the tertian malarial parasite (18 being double tertian infections), 100 with the æstivo autumnal parasites, 27 with both tertian and æstivo autumnal parasites, and 3 with quartan parasites.

The tertian infections were mostly contracted in this country and the Philippine Islands, and proved very amenable to treatment. The æstivo autumnal infections were much more resistant to treatment, but I have yet to see one which has not yielded to quinine when properly given, although, of course, exacerbations of the disease often occurred if the quinine was discontinued. In fact, it is very difficult to determine when any case of malarial fever is actually cured, as is evidenced by the recurrence of the disease in so many cases after weeks or even months in uninfected localities. In one case in which tertian parasites were found in the blood, it had been months since the last attack of malaria, and quinine had been taken steadily up to a week before the attack, when it was stopped. After only a week's absence of quinine the disease recurred, thus proving how resistant malarial infections can be to treatment, and that no active symptoms may show for months under quinine, but its withdrawal may be promptly followed by such symptoms.

I have been able to confirm in the æstivo-autumnal cases the occurrence of two varieties of the parasites causing the disease, and will submit a detailed report as soon as possible concerning this subject.

Three cases of quartan-malarial fever have been observed, one of which was of more than usual interest, showing numerous nearly full-grown quartan-malarial parasites in the blood, characterized by the coarse, immotile pigment, clear outline, and the shrunken condition of the infected corpuscles and their olive-green color. This man had been in the hospital since November 19, 1899, and had never had any distinct malarial symptoms or any paroxysm. Despite this, his blood contained full-grown quartan parasites in goodly numbers. The case is of interest, as showing how the blood may contain numerous parasites, although there are no clinical symptoms produced by them. It also shows how important an examination of the blood is, and how little clinical signs can be relied upon in diagnosing certain cases of malarial fever. In time, when the organisms became sufficiently numerous, this case would undoubtedly have developed symptoms, but the microscopical examination of the blood made it possible to apply the proper treatment before the clinical appearance of the disease, and thus saved the patient much discomfort.

Another case is also of interest, both because of the type of the disease and the great resistance of the infection to quinine. The patient entered the hospital November 3, 1899, with the history of a chill every four days. The blood contained numerous hyaline and half-grown quartan parasites. Quinine was given in large doses. His symptoms disappeared, as did the parasite from the blood. After about three weeks the quinine was discontinued and the elixir of iron, quinine, and strychnine substituted. In a few days he developed symptoms, and on December 11, 1899, his blood was examined and numerous half-grown quartan parasites found. Quinine was at once given in 15-grain doses once a day. The patient improved, and it was thought safe to discontinue the quinine on January 4, 1900. Next day the patient had a chill and numerous quartan parasites were found in his blood.

It will be seen from the foregoing that after reducing quinine and finally substituting the elixir of iron, quinine, and strychnine the patient had slight symptoms and the parasites were found in the blood. The symptoms disappeared, and also the parasites when large doses of quinine were again administered, and as long as the patient continued taking 15 grains of quinine a day he remained well. However, on stopping the quinine for only two days, after having taken it nearly a month, he had a severe paroxysm and numerous parasites were found in the blood. I believe that this is the first case of quartan-malarial fever on record which has proven so resistant to quinine, for, as a rule, quartan-malarial fever is very amenable to treatment. The case is of general interest as showing how long the malarial parasite may remain dormant, apparently disappearing, only to reappear when quinine is discontinued, and how important it is to continue the administration of the drug for weeks after all symptoms have ceased. Since January 6 he has had another exacerbation, due to the withdrawal of quinine.

The occurrence of these three cases of quartan fever has given me an excellent opportunity of studying this interesting and rare variety of the malarial parasite. Of over 1,500 cases of malaria, the blood of which I examined and the records of which I have preserved, only 10 cases of quartan fever were observed. The quartan parasite, on account of its rarity, has not been as often and as accurately studied as either the tertian or æstivo-autumnal parasite. Its cycle of development, as is well known, occupies seventy-two hours. The first form of the organism seen in the blood is a small hyaline disk, very minute and actively amœboid. Although these bodies are generally believed to be indistinguishable from similar tertian parasites, I believe that the quartan-hyaline body is more sharply cut and refractive than the tertian, while the invaded corpuscle is of a more greenish hue. In a few hours these small hyaline organisms have grown larger, are less actively amœboid, and a few granules of dark-brown pigment may be seen within them, generally at the border of the organism. The shape of the organism is either round or triangular, the amœboid motion being very sluggish. The pigment is motionless. I have never seen a pigmented organism which was actively amœboid. The organism is sharply outlined and refractive, while the invaded corpuscles are greenish in color and not swollen. Even at this early stage I believe it is possible to distinguish this form from the tertian parasite, which is dim of outline, of irregular bizarre shape, with active pigment, and inhabiting a pale, swollen corpuscle.

In twenty-four hours the distinguishing features of the quartan parasites are fully developed. The organism is sharply cut and looks often as though it were stamped into the blood corpuscle; is refractive, and its protoplasm often presents a peculiar, finely granular appearance; the pigment is dark brown in color, in the form of rather coarse granules, and is generally collected around the edge of the organism, sometimes forming almost a complete wreath around it; the pigment is absolutely motionless. The shape of the organism at this stage of development is usually triangular, ovoid, or round, and is not amœboid. The invaded corpuscle is smaller than the healthy ones, and is of a darker green color. All these characteristics clearly distinguish the quartan form from the tertian parasite, which is less sharply cut and refractile, is more or less amœboid, very irregular in outline, possessing lighter brown, more finely granular pigment, which is always motile, while the infected corpuscle is pale and often greatly swollen.

At the end of thirty-six hours all the phenomena noted are more pronounced, the organism filling about two-thirds of the corpuscle, which seems to be retracting about it. The pigment is increased in amount, but is motionless and collected in rough masses at the border of the organism, which is not amœboid. The growth of the organism from this time on is very slow, and it is not until a few hours before segmentation that the full-grown bodies are observed. Such an organism is circular in shape, bordered by a thin greenish layer representing the remains of the infected corpuscle, with numerous clumps of dark-brown motionless pigment, not only entirely confined to the periphery of the organism, but scattered through it, the protoplasm of the organism being finely granular in appearance. In many instances segmentation was seen to take place even before the corpuscle was entirely destroyed, the pigment collecting toward the center of the organism and six or more segments appearing within the corpuscle. Most commonly, however, the pigment in the full-grown parasites collects at the center in a solid, almost black, mass, and about the same time all trace of the infected corpuscle disappears, the organism being apparently extracellular. In a short time radial striations are observed shooting out from the central pigment, and these joining at their extremities form from six to fourteen oval segments. As a rule, the number of segments does not exceed ten. They are arranged regularly at first around the central pigment, forming the so-called "marguerite forms," but soon they begin to separate and disappear, the pigment at the same time disintegrating and becoming diffused. The number and the beautifully regular arrangement of the segments would alone serve to distinguish this stage of the quartan from the corresponding tertian parasite, but the quartan segments are also more oval in shape, more refractile, and somewhat larger. The star-like arrangement of the pigment between the segments, which Thayer considers as so characteristic, is generally observed, but I have seen exactly the same arrangement of pigment in tertian segment forms. It is probably simply an accidental occurrence, doubtless more common in the quartan parasite, but not at all peculiar to it.

The pigment in the quartan organism is only motile in the very young forms, is always dark brown in color, and occurs in round granules or in irregular masses of such granules. It generally occupies the periphery of the organism and tends to become collected at one portion, but in the full-grown parasites the granules and blocks of pigment are scattered throughout the protoplasm.

The outline of the quartan parasite, especially after the first twenty-four hours, is always very sharply cut, and appears as though stamped into the corpuscle. The shape of the organism is either round, oval, or triangular, and only in the very early hours of its development does it send out amœboid processes of any size. Later the amœboid movement consists of a gentle, sluggish undulation of the periphery of the organism, but even this ceases after the first thirty-six hours.

The protoplasm is refractive and often, on close inspection with a good light and a high power, a peculiar, finely granular appearance is noted, which has been mentioned. This, together with the sharply cut outline and blocks of pigment, brings to mind very forcibly the similar appearance of the ovoid bodies and crescents of the æstivo-autumnal parasites. Indeed, the organism during every stage of its development resembles much more closely the tertian æstivo-autumnal parasite as it occurs in splenic blood than it does the ordinary tertian organism. The corpuscles which are invaded by the quartan parasites are invariably somewhat shrunken and greener in color than the healthy corpuscles, but are not often crenated.

From this résumé of the characteristic features of the quartan parasite, as it has been observed here, it will be seen that it can be easily distinguished from the ordinary tertian type by its cycle of development covering about seventy-two hours; by its smaller size; sharply cut, more regular outline; refractive, finely granular protoplasm; motionless darker brown pigment, collected peripherally; lack of or very sluggish amœboid motion; smaller number of segments, which are more refractive, oval in outline, and more easily distinguished.

During the past four months I have had the opportunity of completing certain observations upon the flagellated forms of the malarial parasites, which, by the courtesy of the Surgeon-General, have been published in the New York Medical Journal for December 23, 1899. A brief review of the conclusions arrived at follows:

From the observations made I believe that there occur in the blood of cases of tertian, and especially in the blood of the æstivo-autumnal fever, two forms, or perhaps varieties, of the flagellated malarial organism.

The following method is most useful in obtaining flagellated bodies: The finger or ear is carefully cleansed with alcohol, as also the slides and cover glasses. Either the finger or lobe of the ear is compressed. A puncture is made with a sterile needle, and the first drop of blood wiped away. The second drop remains exposed until the slide is gently breathed upon, when the tip of the drop is pressed upon the side of the slide which has been thus moistened. The cover glass is then immediately placed over it and the preparation is ready for examination. The slight exposure of air and the small amount of moisture upon the slide seems to hasten exflagellation, since specimens so prepared almost invariably contain flagellated bodies. The two forms of flagellated parasites above referred to are designated as the active and passive flagellated plasmodium. The active form is the most common form found in the blood of tertian malarial fever. It is also found in æstivo-autumnal fever, but in this condition varies somewhat in morphology in unessential particulars. The chief facts to be noted in reference to the active form are the extreme activity of the pigment in the parasite prior to flagellation and during the time the flagella remain attached to it, the clubbed extremity of the flagella and the separation and constant individual existence of the flagella, and their power of individual and progressive movement in the blood. While the passive flagellated plasmodium is more common in æstivo-autumnal fever than in the tertian malaria, not every case shows flagellated organisms. They will only be found in the peripheral blood in those cases of fever showing crescents, for it is from the crescent that they develop. The points to be especially noted in the passive flagellated parasite are that the pigment does not become active and distributed throughout the plasmodium, the circular arrangement of the pigment, the absence of clubbed outer extremity to the flagella and the frequent presence at the juncture with the round body of a nodule which resembles exactly the clubbed outer extremity of the flagella of the active body. Instead of the rapid serpentine lashings of the flagella in the active form the movements in this form apparently consist in a rapid revolving upon their axes, the flagella sometimes pulling themselves loose from the round body and again becoming attached to it. In specimens in which the nodular swelling is not noted the pigment has a more rapid vibratory motion. These forms of malarial parasites represent the efforts of flagella which have been set free in the circulation to penetrate into the interior of the parasite represented by the round bodies just described.

In the light of the researches of McCallum, Thayer, and others, I believe that the passive flagellated bodies represent a phase of fertilization of the parasite probably having to do with its extra corporeal life.

The following observations upon the staining reactions of the parasites of malarial fever are of interest and are the result of experience gained in the examination of a very large number of stained specimens of malarial blood:

*The staining reactions of the tertian, quartan, and æstivo-autumnal parasites.*—There are many ways of staining the parasites of malarial fever, but a description of a few of the most useful is all that will be attempted at this time. The blood smears are prepared by carefully cleaning the lobe of the ear, puncturing it with a sterile needle or lancet, touching a clean cover glass to the resulting drop of blood, and placing another cover glass over it. The two are then slid very gently and carefully apart, and the smear allowed to dry. Care should be used not to get too much blood upon the first cover glass, and to use no pressure in sliding the glasses apart. After drying the smears are allowed to harden in equal parts of alcohol and ether for half an hour, when they are ready to stain. The plasmodia are stained by nearly all basic aniline dyes, but not by the acid dyes. For staining, I use either Romanowsky's or Chenzinsky's method, the latter preferably. Romanowsky's method is as follows: Two solutions are used—solution No. 1, a saturated aqueous solution of methylene blue; solution No. 2, a 1 per cent watery solution of eosin. The methylene-blue solution should be at least one week old. The staining solution is made fresh each time it is used, and consists of one part of the filtered methylene-blue solution added to two parts of the eosin solution and thoroughly mixed. The smears are placed face down upon this solution and allowed to stain from one-half to three hours or more. The best results are obtained after about two and a half hours' staining. By this method the red corpuscles are stained red by the eosin and the parasites a deep blue by the methylene blue. Romanowsky believed that the nuclear chromatin stained a violet color, but I have never been able to confirm his observations. Although very beautifully stained specimens can be secured by this method, I much prefer the method of Chenzinsky, for the reason that it gives a more natural appearance. By Romanowsky's method, and, in fact, by most methods, the coloring is very vivid, especially that of the red corpuscles by eosin, whereas in Chenzinsky's method the red corpuscles are stained more dimly, appearing almost natural in color, while the parasites are stained a fine blue, fully as well as by any other method.

Chenzinsky's method is as follows: A concentrated watery methylene-blue solution, diluted one-half with water, is added to an equal amount of a one-half per cent solution of eosin in 60 per cent alcohol. This solution is bottled and kept and improved in staining qualities by age. The specimens are stained with this solution for five minutes and then washed in water, dried, and mounted in Canada balsam. Much better specimens are obtained by staining for two hours or more, and I have secured very fine specimens by leaving the smears in the staining solution overnight.

There are numerous other methods of staining the malarial parasites, but these are the most satisfactory and useful.

A word as to the use of stained preparations for diagnostic purposes. I am aware that a few authorities use stained preparations almost entirely for diagnosis, but I believe that it is a cumbersome and very unreliable practice. Where it is impossible to keep a specimen of blood fresh enough to look at under the microscope the use of stained preparations is of course necessary; but where it is possible to examine the blood fresh it is always to be preferred, as it is infinitely more exact and satisfactory. I have seen many cases where the fresh blood showed numerous ring forms of the æstivo-autumnal parasites in which smears taken at the same time and stained most carefully showed either none or at most a very few dimly colored parasites. There is also the danger of mistaking stained granular matter or débris lying upon the corpuscles for the small æstivo-autumnal parasites in the smears, and this mistake can be very easily made by one who is unaccustomed to examining such preparations. The only strictly scientific way of diagnosing the various forms of the malarial parasites is by the microscopical examinations of the fresh blood, and after all most specimens of blood will keep in a suitable condition for examination under ordinary circumstances for six, eight, or even a greater number of hours, despite the text-book statements to the contrary.

The staining method devised by Futcher is to be recommended wherever speed is desirable in staining or where the fresh blood can not be examined and a speedy diagnosis is essential. It is as follows: The smears are hardened in a 1 per cent solution of formalin in 90 per cent alcohol for from a half to one minute. They are then dried and stained for from twenty to thirty seconds in the following solution of thionin, known as Marchande: Saturated solution of thionin in 50 per cent alcohol, 20; 2 per cent solution of carbolic acid, 100. The solution should stand several days before using. After staining the specimen is washed in water, dried, and mounted in Canada balsam. The red corpuscles are stained a very slight greenish hue, while the parasites are deep violet in color. Care should be used not to stain for too long a time, and also not to allow the formalin solution to act long, as it seems to cause a degeneration and vacuolization of the red cells. The method stains the æstivo-autumnal rings very satisfactorily.

*The staining reactions of the tertian and quartan malarial parasites.*—In properly stained preparations of the tertian and quartan parasites two distinct portions can be made out—a deeply staining ectoplasm and a dimly staining endoplasm. The endoplasm is really the nucleus of the parasite, and sometimes there can be seen, situated eccentrically between the ecto and endo plasm, a very deeply stained spot, the nucleolus, and this contains the greater part of the chromatin substance. These appearances are best observed in half-grown parasites which are not undergoing marked amœboid change of form. The ectoplasm contains the pigment. The nucleus is generally round or oval in shape and eccentric in situation. The very youngest tertian and quartan parasite is represented by a blue ring, the center of which is almost colorless. At some portion of the central colorless area and the blue-stained ring may often be seen a deeply stained dark-blue dot. Here we have the clearly differentiated ectoplasm stained blue, the endoplasm, or nucleus, almost unstained, and the deeply stained nucleolus. As the organisms grow, pigment granules appear in the ectoplasm, or stained portion, and by reason of the change of shape to the amœboid motion the central colorless nucleus is not easily made out, it being often situated in one of the pseudopodia. By reason of the amœboid changes in the shape of the parasites and the situation of the pseudopodia at different levels in the infected corpuscle it often appears as though there were two or more stained parasites within one corpuscle. In the stained ectoplasm both deeply and dimly stained areas can be distinguished. These occur without any regularity, and are probably due to different quantities of the stained protoplasmic substance collected at certain places. It will often be noticed that the extremities of the pseudopodia are stained much more deeply than other portions of the parasite. Very seldom is any pigment seen within the clear, almost unstained nucleus. Often, however, young forms are seen which stain almost uniformly throughout, no trace of a nucleus being visible.

As the parasites grow larger and approach full development, the distinction between the ectoplasm and the nucleus is gradually lost and is often represented simply by a more or less irregular, dimly stained area free from pigment. Often even this appearance is absent, and the parasite consists of a pretty uniformly stained pigmented mass of protoplasm. The small, deeply stained spot or nucleus always disappears before the parasite attains its full growth, and is by no means constant even in the young forms.

Just before segmentation, when the pigment has collected in a clump, the stained tertian or quartan parasite presents a peculiar dotted or mottled appearance, due to small, very deeply stained dots or spots scattered through the more deeply stained protoplasm of the parasite. As segmentation advances and the parasite begins to split up it will be seen that these darkly staining dots are in reality the nucleoli of small dimly stained rings or young tertian or quartan parasites, and correspond exactly to the young stained forms first described.

The pigment does not stain appreciably in well-prepared specimens, and the parasites which show the centrally situated clear, very dimly staining area or nucleus are always collected within the stained ectoplasm. This agrees well with the well-observed fact that in the fresh specimen the pigment granules are almost always collected at or near the periphery of the organism in its young pigmented stage.

*The staining reactions of the æstivo-autumnal malarial parasites.*—The staining reactions are similar, both for the quotidian and tertian æstivo-autumnal parasites.

The "ring forms" of the æstivo-autumnal parasites show a more or less deeply stained outer portion, a round or oval unstained central position, and a very deeply staining minute dot, situated at some point at the periphery of the stained ring. As the parasites grow, the endoplasm stains faintly and the distinction between it and the ectoplasm becomes less marked. The deeply staining dot disappears and just before segmentation the parasite stains a uniform blue throughout. The pigment granules, if present, are collected in the stained outer portion, in the half-grown parasites, and at or near the center just before segmentation. The individual segments stain, as do the intracorpuscular rings, the only difference being that they are smaller.

*Staining reactions of the crescents and ovoids.*—The crescent form of the æstivo-autumnal parasites presents many interesting staining phenomena. In those crescents in which the pigment is collected near the center the organism as a whole takes a rather dim blue color, the poles staining much more deeply, while the center, in which the pigment lies, is often unstained or but dimly stained. At each pole, as a rule, may be seen a very deeply stained semilunar portion extending to its periphery and covering the horns of the crescents. The appearance presented is that which would result had each horn of the crescent been dipped into a darker staining fluid and withdrawn. Between the dimly stained horns of the crescent and lying within the more dimly stained protoplasm are often seen very deeply stained round or oval spots irregularly distributed. In some crescents these deeply stained spots are very distinct and occupy a large part of the protoplasm of the crescent. As a rule the area in which the pigment lies and immediately surrounding it stains very faintly or not at all, but it is not rare to see a darkly staining belt or band passing through the center of the crescent, seeming to divide it into two parts. This appearance, however, is not common and does not by any means prove the dual nature of the crescent. Surrounding the crescent in the majority of instances is a narrow eosin-stained border, believed to be the remains of the red corpuscle in which the crescent was developed. This red-stained border does not always, however, entirely surround the crescent; sometimes it is only observed between the two horns, forming the so-called "bib;" sometimes it is absent there and present over the convex portion of the crescent; sometimes it can only be seen covering the horns of the crescent. It is often observed to be broken or ragged in outline and interrupted in places, thus suggesting the gradual disintegration of the red cell. Crescents are often observed which do not show any eosin-stained border, and in such cases we may assume that the destruction of the red cell is complete and the crescent is free in the blood plasm.

While the above description applies to the majority of stained crescents, many exceptions occur. Quite often crescents are observed stained uniformly throughout. Others do not present the deeply stained spots or polar staining; others stain very dimly at one pole and deeply at the other. In fact, it would be almost impossible to describe all the variations which may occur, but in the vast majority of examinations of stained crescents the description given will be found correct. There is no evidence in crescents of a nucleus.

The ovoid bodies stain exactly as do the crescents, so far as I have been able to observe, save that the polar staining is not so pronounced.

In studying the blood of soldiers returning from the Philippines and suffering from malarial fever I have noticed in several cases a peculiar form of the malarial parasite and which I have classified in reporting upon the cases as a tertian parasite, but which presents so many differences from the ordinary tertian parasite as to indicate that it is a distinct variety of the plasmodia.

I have invariably observed it in the blood of cases having tertian paroxysms, and always in large numbers. All stages of the parasite have been observed, from the hyaline disk to the segmenting bodies. It appears first as a very highly refractive circular hyaline disk, having a sharply cut outline and having absolutely no amœboid motion. The absence of amœboid motion differentiates it from all other young forms of the malarial parasites, and is, therefore, very distinctive. The hyaline disk is about one-fourth the size of the infected corpuscle, which is normal in size and appearance. I have never observed any "ring forms" of this hyaline stage.

In a few hours the hyaline disk has grown to about one-half the size of the corpuscle which contains it and has become pigmented. The pigment exactly resembles that found in the ordinary tertian parasite, being finely granular and motile and distributed unequally throughout the parasite. The parasite is perfectly circular in shape and devoid of all amœboid motion. The border of the parasite is very sharply defined and the protoplasm very refractive and sometimes finely granular. The infected corpuscle is unaltered in size or color and is not crenated or shrunken.

In about 38 to 40 hours the parasite has nearly filled the corpuscle containing it, and the amount of pigment has increased. The parasite is perfectly circular in shape and presents the same refractive protoplasm and sharply cut border; the pigment is sluggishly motile, reddish in color, and the shape of fine granules. The infected corpuscle is normal in size and color.

I have not as yet observed the presegmenting forms in the blood, but have seen several free segmenting forms. These are much smaller than the ordinary tertian segmenting forms, and the greatest number of segments observed has been ten. The segments are oval in shape or perfectly round, sharply cut and refractive. The pigment is usually collected in a solid reddish brown mass at the centre and is immotile.

From the description given it will be seen that this parasite differs markedly from the other known malarial organisms.

The following table will make this more plain:

### FROM THE TERTIAN PARASITE.

*Hyaline stage:*

1. Always circular in shape, while tertian is irregular and bizarre.
2. Absence of amœboid motion, while tertian is markedly amœboid.
3. Clear-cut and refractive, while tertian is indistinct and not refractive.
4. No change in infected corpuscle, while the tertian-infected corpuscle is often larger and more pale.

*Pigmented stage:*

1. Always circular in shape, while tertian is irregular.
2. Absence of amœboid motion, while tertian is amœboid in early stage.
3. Clear-cut outline and refractive, granular protoplasm, while tertian outline is less distinct and protoplasm is cloudy.
4. More sluggish motion of pigment.
5. No change in size, shape, or color of infected corpuscle, while in tertian the infected corpuscle is larger than normal and much more pale in color.

*Segmenting stage:*

1. Smaller number of segments and their more clearly cut outline.

### FROM THE ÆSTIVO AUTUMNAL PARASITE.

*Hyaline stage:*

1. Perfectly circular shape, while the æstivo autumnal parasites are often irregular.
2. Absence of "ring forms."
3. Absence of all amœboid motion.
4. Large size.
5. No change in infected corpuscle.

*Pigmented stage:*

1. Large size.
2. Greater amount of pigment and greater motillity of it.
3. No "ring forms."
4. Absence of all amœboid motion.
5. No change in infected corpuscles.

*Segmenting stage:*

1. Greater size of segments.
2. Larger amount of pigment.

### FROM THE QUARTAN PARASITE.

The differentiation of this parasite from the quartan organism is much more difficult than is the case with the tertian or æstivo autumnal parasites. Indeed, I first mistook them for quartan parasites until the clinical histories of the cases and certain peculiarities of the parasites caused me to study them more carefully. This organism is about the size of the quartan parasite, has the same clear-cut outline and refractive, finely granular protoplasm, and divides into about the same number of segments, but the following differences are to be noted:

*Hyaline stage:*

1. Perfectly circular shape; quartan irregular.
2. Absence of amœboid motion; quartan amœboid.

*Pigmented stage:*

1. Perfectly circular shape; quartan often triangular or ovoid.
2. Absence of amœboid motion; quartan amœboid at beginning of pigmentation.
3. Larger amount of and more finely granular pigment, irregularly distributed and motile; quartan has coarse pigment granules, arranged in a wreath-like manner around the edge of parasite, collected at one portion, and the pigment is absolutely motionless.
4. No change in infected corpuscles; corpuscles infected with the quartan parasite are usually smaller than normal and of a darker brown color.

Cycle development, 48 hours; quartan, 72 hours.

From the foregoing it will be seen that the two great points in which this parasite differs from all other malarial parasites is the retention of its perfectly circular shape through all stages of development and the absolute absence of all amœboid motion. These two phenomena have been present in all the cases in which I have observed the organism, about six in number. I believe that this parasite is either a distinct variety of the malarial plasmodia or that it is a tertian parasite which has acquired the characteristics described through some unknown condition of environment acting upon the development of the organism.

In closing this portion of my report I wish to call attention to the large number of cases of æstivo autumnal fever presenting no symptoms, but in which the blood examinations showed parasites. Fully 40 per cent of the cases showed no active symptoms.

*The Widal test.*—Five hundred and sixty-one Widal tests were made, of which 96 proved positive and 465 negative. Of the 96 positive reactions, 51 were reexaminations made of cases tested between July 1 and October 4, 1899. In all the cases giving a reaction the clinical symptoms showed them to be typhoid, save in one instance, where the diagnosis was doubtful clinically. In no case in which typhoid fever was diagnosed clinically did the Widal test fail to react.

In point of time the reactions may be divided as follows:

| Day of disease. | No. of cases. | Day of disease. | No. of cases. |
|---|---|---|---|
| Fifth day | 4 | Second week | 2 |
| Sixth day | 10 | Fourth week | 35 |
| Seventh day | 2 | Sixth week | 20 |
| Eighth day | 2 | Six months, convalescent | 5 |
| Ninth day | 1 | One year, convalescent | 4 |
| Tenth day | 4 | Two years, convalescent | 2 |
| Eleventh day | 2 | Seven years, convalescent | 1 |

In the last case the patient gave a clear history of having had typhoid fever seven years ago, and had not been sick until his present illness from chronic dysentery. The case is of interest as showing how long the reaction may persist. It is probable in such cases as this that many of the confusing and varying results of the Widal test have arisen, causing an ill-deserved condemnation of it from men too careless to inquire into the past history of the patient, whose blood has given the contradictory results. The more I use the test the more I become convinced that, if properly used, with perfect technique and proper attention to every detail, it is practically the best and surest diagnostic sign of the disease which we possess at present. In more than one instance in cases when the clinical symptoms of typhoid were entirely absent, and yet a positive Widal was obtained, autopsy showed the presence of typical ulcerations in the intestine, thus proving the correctness of the reaction.

The large negative result is due to the fact that the Widal test has been used largely here as a routine measure, most of the cases being tested regardless of the disease present. There has been no complete tabulated list of these cases kept, but below are listed 360, giving the diagnosis and results of the test. It may be said that on only one of these cases was the result positive, that of a case of miliary tuberculosis. While the patient gave no history of having had typhoid fever, it is possible that he may have had a slight attack while at Chickamauga Park in 1898.

| Diagnosis. | No. | Result of test. | |
|---|---|---|---|
| | | Positive. | Negative. |
| Tertian malarial fever | 45 | | 45 |
| Quartan malarial fever | 2 | | 2 |
| Æstivo autumnal malarial fever | 32 | | 32 |
| Comb. æstivo autumnal and tertian | 9 | | 9 |
| Chronic dysentery | 94 | | 94 |
| Chronic diarrhea | 10 | | 10 |
| Chronic tuberculosis | 50 | | 50 |
| Acute miliary tuberculosis | 5 | 1 | 4 |
| Acute rheumatism | 4 | | 4 |
| Chronic rheumatism | 30 | | 30 |
| Insolation | 5 | | 5 |
| Progressive pernicious anæmia | 11 | | 11 |
| Diphtheria | 5 | | 5 |
| Smallpox | 2 | | 2 |
| Appendicitis | 4 | | 4 |
| Wounds of operative cases | 20 | | 20 |
| Acute pleurisy | 4 | | 4 |
| Tonsillitis | 8 | | 8 |
| Abscess of liver | 2 | | 2 |
| Acute bronchitis | 5 | | 5 |
| Lobar pneumonia | 1 | | 1 |
| Acute gastritis | 1 | | 1 |
| Chronic gastritis | 1 | | 1 |
| Neurasthenia | 1 | | 1 |
| Acute coryza | 1 | | 1 |
| Insanity | 8 | | 8 |
| Total | 360 | 1 | 359 |

*Examination of urine.*—There have been 2,071 specimens of urine examined, both chemically and microscopically. Of these 282 contained albumen, 102 granular and hyaline casts, 97 pus, 13 blood, and 3 sugar.

In examining the urine of chronic dysentery cases I was impressed by the great increase in indican which they presented, and undertook some observations as to the significance of this increase in indican in this particular disease.

Before giving the results of the indican tests a few words regarding the relation of indican to disease, and the objects aimed at in the tests, may be of interest.

When albumen is undergoing bacterial putrefaction indol is produced, and this is the basis of indican. Within the system it is oxidized to indoxyl-sulphuric acid. This acid, decomposed, yields indigo blue or indican. In health but little indol is produced, as putrefaction is absent, and accordingly indican can not be detected in the urine, or, if present, it is in very minute quantity.

Indican occurs in the urine in a number of disease processes and is not pathognomonic of any one disease. It occurs with albuminoid putrefaction. In tuberculosis, in certain nervous disorders, in malignant diseases of the internal organs, and in wasting diseases indican often occurs in excess in the urine. Fetid pus may be the source of indican, as in abscess of liver and empyema. In these tests, then, it is not intended to show that indican in the urine is of any diagnostic importance as regards chronic diarrhea or dysentery, but to learn, if possible, how often it occurs, what its import is, and whether its amount helps in any way in prognosis, and as to the success or otherwise of any plan of treatment.

The test employed for detecting is as follows: Thirty cubic centimeters of urine is mixed with an equal quantity of hydrochloric acid, 1 to 3 drops of dilute nitric acid added, and then boiled, when the mixture turns a dark color. It is then cooled and about 5 cubic centimeters of chloroform added and shaken. The chloroform sinks to the bottom of the test tube and, if indican is present, is colored blue, violet, or almost black. If the indican is present in slight quantity, the chloroform is of a beautiful blue color; if there is a large increase, the chloroform is a deep reddish-violet color, while if the increase is immense, the indican falls as a fine dark-blue or black powder and when it has settled to the bottom of the tube forms a dense, almost black precipitate.

Now, as to the results of the indican tests in cases diagnosed as chronic dysentery to date:

There have been 63 cases investigated, in 46 of which the indican was increased, while in 17 it was normal.

In the 46 cases in which the indican was found increased 22 showed a slight increase, 12 a large increase, and 12 an immense increase.

The relation of the number of bowel movements a day to the amount of indican present is as follows:

| Movements per day. | Number of cases. | Slight increase. | Large increase. |
|---|---|---|---|
| 1 | 10 | 3 | 7 |
| 2 | 11 | 4 | [1]7 |
| 3 | 7 | 4<br>[1]2 | 1 |
| 4 | 6 | 4<br>[1]1 | 1 |
| 5 | 7 | 2<br>[1]2 | 3 |
| 6 | 2 | 2 | |
| 7 | 1 | 1 | |
| 8 | 1 | 1 | |
| 9 | 1 | 1 | |
| 10 | 0 | | |

[1] Immense increase.

The relation of the negative cases to bowel movements is as follows:

| | Cases. |
|---|---|
| 1 movement a day | 1 |
| 2 movements a day | 1 |
| 3 movements a day | 3 |
| 4 movements a day | 3 |
| 5 movements a day | 3 |
| 6 movements a day | 3 |
| 10 movements a day | 2 |
| 11 movements a day | 1 |

Twelve of the above cases have 4 or more bowel movements a day.

At the first test 7 cases had a large increase in indican, with but 3 bowel movements a day.

One week later the same 7 cases showed no indican, but were having from 5 to 15 bowel movements a day. As regards prognosis, the results obtained would at first appear contradictory, if a small amount of indican is considered as a favorable import, but this only apparent. Von Jaksch says: "In general, therefore, the appearance in the urine of large quantities of indican implies that abundant albuminous putrefaction is progressing actively in some part of the system. In simple constipation a notable indicanuria will very often arise." In dysentery and diarrhea no one can doubt but that there is much intestinal putrefaction. Why, then, in many cases having few bowel movements and thus generally considered to be favorably progressing, is indican found, while in many cases having numerous bowel movements the indican is absent or normal? The reason is obvious. In the latter cases, the intestine, by frequent movements, is kept empty, and putrefaction is accordingly less intense; the indol found is rapidly excreted and indican is not formed. Where the bowel movements are few and the disease is present putrefaction is intense, much indol is formed, has time to combine with the sulphuric acid present, and indican is excreted.

This is certainly a strong argument for the eliminative treatment of dysentery by salines, as sodium sulphate, so highly recommended by the French, as no one will deny that indican in dysentery means intestinal putrefaction, and intestinal putrefaction in the long run in these cases means death.

The indican test so far shows this, as regards prognosis: A case of dysentery having few bowel movements a day and showing no indican in the urine is progressing very favorably. A case of dysentery having many bowel movements a day and showing much indican in the urine is in a dangerous condition.

Cases having few bowel movements and much indican need eliminative treatment.

In cases of dysentery having many bowel movements and no indican the prognosis is doubtful, unless the bowel movements are due to eliminative measures.

Further research in this subject will undoubtedly result in at least confirming these results.

*Examinations of sputa.*—There have been 496 specimens of sputa stained and examined for the bacillus of tuberculosis, of which 70 showed the presence of the bacillus, while 426 were negative. Most of the negative results were obtained in patients suffering from chronic diarrhea or dysentery. Many cases of this disease simulate tuberculosis very closely in their lung symptoms and physical signs, there being often a cough, much expectoration, night sweats, etc., while percussion is also misleading, as the abnormally thin chest wall and the oftentimes shrunken or emphysematous lung tissue give a resonance strongly resembling the percussion note in cavity formation in the tuberculosis lung.

There have been many cases of chronic dysentery in which the attending surgeons have suspected and even diagnosed pulmonary tuberculosis, but in which no bacilli were found after repeated examinations of the sputa. Autopsy in several of these cases demonstrated the value of sputum examinations over physical signs, for in none of these cases was there any trace of pulmonary tuberculosis, although hypostatic pneumonia, pleurisy, and emphysema were commonly found and evidently caused some of the physical signs.

The sputa of all patients having a cough was examined for the tubercle bacillus, whether or no lung signs were present, which also helped in obtaining the large negative result. In the examinations for the tubercle bacillus here, as well as elsewhere, I have noticed especially the great variation in morphology which this bacillus presents in different specimens of sputa. These variations are interesting from both a botanical and diagnostic point of view. From the description of the germ in the majority of text-books upon bacteriology we are prepared to see almost invariably a slender rod, about two-thirds the diameter of a red-blood corpuscle in length, straight or slightly curved, and sometimes presenting a beaded appearance. As a matter of fact, though the form just described is altogether the most common, we do find in a very large number of cases many deviations from the classical type, some of them being peculiar and interesting. The beaded bacilli are present in small numbers in almost every specimen of sputa examined, but quite often specimens are found which contain almost nothing but the beaded form of the organism. As the unstained portions of the bacillus are held by some authorities to be spores, it is of interest to inquire into the meaning of this form. It has been the author's experience that the beaded form of the bacillus is found most often and numerously in the sputa of acute, rapidly advancing cases of tuberculosis. As spore formation in a germ is not evidence of rapid multiplication, but only occurs where multiplication by fission is hindered by unfavorable conditions, the spore being a resistant form of the organism calculated to withstand such conditions, we would expect to find spore-bearing bacilli more numerous in chronic or slowly advancing cases of the disease rather than in acute cases, where the conditions must be more favorable for the growth of the organism. It would seem, then, that the form of the bacillus in question can hardly be called a sporulating body if the theory just quoted is correct, but in the present state of our knowledge and reasoning from the well-known appearance of other spore-bearing bacilli when stained it is hard to explain them in any other way. The beaded bacilli are often numerous, sometimes there not being a solid bacillus to be seen in certain microscopic fields, and they resemble very much short strings of minute streptococci. In general, if the bacilli are curved at all it is but slightly, but in rare instances the curvature may be very extreme. In several instances a bacillus was observed almost doubled upon itself, forming a U-shaped organism. This form is, however, very rare, it being much more common to find the organism less acutely bent. These curved forms are almost always stained uniformly throughout, but occasionally they are irregularly stained. They should be carefully examined, as quite often a similar appearance is produced by the joining of two bacilli, but this is more V-shaped.

A form of much interest, because of the liability of its being taken for another organism, is that to which may be given the name of "streptococcic form." Ordinarily the beaded form of the bacillus, if examined carefully, will be seen to be continuous in outline, the clear spaces being bounded laterally by a dimly stained membrane. In this form, however, no such continuation of the bacillus can be found, the deeply stained portions being circular in form and separated one from the other. These deeply stained portions may be two in number when the organism resembles a diplococcus, or they may be strung out in long or short chains, when it is almost impossible to distinguish them from streptococci. It is just here that the method of decolorizing becomes important, for many times I have been in great doubt respecting this form of the organism until, after repeated and careful use of the acid solution, it became evident that it was the tubercle bacillus, and not the streptococcus, which was present. As streptococci are very numerous in tubercular sputa in many instances, and as this form of the tubercle bacillus so much resembles them, too much care can not be taken in staining and decolorizing. In some instances a portion of the bacillus stains solidly and the remainder is broken up into deeply stained dots.

It sometimes happens, in examining sputa for this organism, that forms are detected which are very thick and deeply stained. This appearance may be caused by the coalescence of two or more bacilli laterally, or it may be a form of a single organism. Certainly it has been impossible to detect any separation longitudinally, and I do not remember to have ever seen an appearance which would suggest that this form is composed of more than one organism.

The looped form of the bacillus occurs rarely. The organism is longer than usual, and twisted upon itself so as to form a loop, but more commonly the loop is situated at one end, the rest of the bacillus being straight or slightly curved.

The long "filamentous form" is of rare occurrence, but it is of great interest. It is not an uncommon form in old cultures and has been often described, but in sputum it is much less common. The filaments are almost invariably stained uniformly throughout, the only thing peculiar about them being their curved outline and their great length. Their resemblance to the tubercle bacillus as ordinarily described is, as can be seen, very slight, but as they are very rare and always accompanied by large numbers of the classical bacilli the diagnosis of tuberculosis will not be endangered.

The remarkable feature about the "knobbed form" is that at some portions of the bacillus, generally on its lateral surface, there is a well-developed knob or lump. This lump may, however, be situated in the center of the organism.

Having within the past three months come across two cases the sputa of which showed numerous examples of the branching form of the bacillus, a description of this rare form may be of interest. I have observed it once before in tubercular sputa and quite often in old attenuated cultures of the germ. Nocard and Roux were the first to call attention to branching and budding forms in avian tuberculosis. Klein, Dixon, and Mafucci noticed the branched form in old cultures, and Fischel called attention to the analogies between those organisms and the ray fungus of actinomycosis. Coppen Jones has contributed valuable information regarding these forms, and Burns, Marpmann, Bahr, Friedrich, and Semmer have confirmed the occurrence of such forms. These forms have been observed most frequently in old cultures, but Fischel and Coppen Jones have observed them in the sputa.

In preparations from the sputa, in two cases examined here, several bacilli presented true branching and also what I believe to be intermediate stages between the simple and the branched rod. While the typically straight or slightly curved rods were much the more numerous, yet every preparation showed some of the branching forms. In neither of these cases, however, were the intermediate and large branched forms so numerous or so typical as in a case previously reported by me in the Journal of Experimental Medicine, Vol. 111, No. 3, 1898.

Very common in many specimens of sputa were bacilli which resembled the branching forms and which may be called "false branching forms." On casual examination the resemblance which these bacilli (for they are multiple) bear to the true branching form is striking and it needs very careful focusing and good illumination, in many instances, to distinguish the difference. This appearance is due, not to a single bacillus sending off branches, but to two or more bacilli lying closely together and in such a position as to give the impression of true branching. Careful examination will, however, in almost every instance disclose a slight, unstained interval at the point where the suspected branching takes place. Such a minute examination should be made of every bacillus which appears to branch. Where no unstained interval can be detected by reason of one of the bacilli overlapping another, careful focusing will show a difference in the level of the bacilli where they overlap, and also a deeper staining at this point, whereas in the true branching form no such difference in level or staining can be detected. Another distinction exists in the fact that in the false branching type the bacilli forming the supposed branches are of the same length as the parent germ, whereas in the branching form the branches may be much longer or shorter than are the bacilli from which they spring.

Of the true branching bacilli several forms may be observed which are doubtless simply stages in the growth of the organism. In certain fields there are some bacilli which show at one or more points small knob-like projections, which cause a marked bulging in the outline of the organism. They need sharp focusing and a good light to be distinguished, as in some of them the bulging is very slight and only careful examinations will demonstrate it. The bulging or knob is generally situated laterally, but may be central. The bud, as it may be called, stains like the rest of the bacillus, and sometimes a very small, oval, unstained speck may be seen within it which resembles the unstained sections of the bacillus. Generally, however, no such appearance is present, the bud staining uniformly throughout. Is this unstained oval speck a spore? I believe not, any more than are the similar unstained spots which occur in tubercle bacilli in general and which are not regarded by the best observers as spores.

The budding form just described is of interest, as it is doubtless the first stage of branching, and I believe it to be present more often than is generally known. I have examined a large number of specimens of phthisical sputa since I first observed this form and have found it present in about 15 per cent of the cases, although in none was the branched form present. This result may appear contradictory if we assume that the budding is the first stage of the branching form, but it is probable that some unknown factor has hindered the further development of the process of branching.

From the budding forms to the fully developed branching forms is merely a stage of growth, evidenced by finding now and then a bacillus with very short branches, evidently outgrowths from the small elevations. The fully developed forms are bacilli, presenting one or more branches developing from the parent bacillus. There are many variations in the manner of growth. Occasionally bacilli are seen where the primary branches have given off one or more secondary branches.

Fantastic figures are often formed by the bacilli, caused by their curved form and the twisting of the branches which are given off. Nearly all the bacilli show well-marked stained and unstained areas, but it is noticeable that the branches present fewer of these, although some show unstained areas, irregular in outline. The bacilli are always larger than usual and often filaments are seen which are very long. The bacillus destined to branch becomes longer than usual and presents one or more knob-like outgrowths somewhere along its course. These outgrowths gradually lengthen and at last become true branches, which may in turn give off other branches.

We are not informed as to the special conditions which determine the development of branching forms of the tubercle bacillus. They have been most frequently observed under unfavorable conditions of environment, as in old cultures. Still, the recent observations of Babes and Levaditi and of Friedrich show that similar forms occur in fresh miliary tubercles. Various theories have been advanced as to the significance of the branching, filamentous, and club-shaped forms of the tubercle bacillus. Some have considered these to be simply degenerative or pathological forms of the bacillus, and without significance as to the classification of the organism. This is the view advocated by A. Fischer, who places these forms of the tubercle bacillus, as well as similar ones of the diphtheria bacillus, in the group of involution forms. There are several objections to this view, of which it will suffice to mention that the forms in question are not limited in their occurrence to old cultures and unfavorable conditions of environment. The opinion more generally advocated is that the occurrence of these forms necessitates some change of formerly accepted views as to the classification of the micro-organisms concerned. Thus, Klein suggests that the branching is a reversion to an ancestral type which presents mycelial growth. Fischer points out the analogies between actinomyces and the tubercle bacillus and Coppen Jones holds that both belong to the same group of organisms, but he leaves undecided whether this is among the hyphomycetes or some other class. He suggests the name tuberculomyces (hominis, avium, etc.) for the bacillus. Burns regards the branching shapes as involution forms when observed under parasitic conditions. He says "they pertain to the saprophyte growth form of a higher organism, which as a parasite in the animal body appears in the form of rods." Marpmann accepts the interpretation of Burns, employs the designation "mycobacterium tuberculosis," a name adopted by Lehymann and Newmann in their Grundriss der Bakteriologie.

The sharper differentiation within recent years of the streptothriceæ, cladothriceæ, and allied organisms has led several writers to express the opinion that the tubercle bacillus and diphtheria bacillus are very closely allied to the streptothriceæ, and some hold that they should be transferred to this group. Kruse, in the last edition of Flugge's Mikro Organismen, discusses this question, and although he does not venture to place the bacteria in question under the streptothriceæ he considers them to be very closely related to actinomyces and other organisms belonging to this group. Johan-Olsen places the tubercle bacillus under the streptothriceæ, and accepts the name "tuberculomyces." The streptothrix group is characterized especially by branching filamentous forms of organisms, and is placed between the bacteria proper and the hyphomycetes, being more closely akin to the former than to the latter.

It is evident that further investigations are needed in order to enable us to come to any definite conclusions as to the significance of the branched forms considered, and for the present it would seem premature to adopt any radical change in the accepted classification of the tubercle bacillus.

*Examination of fæces.*—There have been 313 examinations made of the fæces, of which only 8 showed the presence of the amœba coli. This result has been surprising to me, as I had expected to find a large portion of the cases of dysentery returning from the Philippines to be amœbic in nature. That such is not the case, however, is evident by the exceedingly small number in which amœbæ were found and by the findings at autopsy. The greater part of the dysentery afflicting our troops in these islands is due to a different cause; the pathological lesions produced are dissimilar to those of amœbic dysentery, as are also the clinical histories of the cases. In a special report upon the pathology of dysentery, which will be submitted to you very soon, I have considered the character and microscopical findings of the diseased intestines and my observations upon a bacillus separated from the tissues in certain cases, and which is evidently identical with that separated by Flexner in cases studied at Manila and by Shiga in Japan. While it is hardly justifiable to claim that this organism is the cause of the disease, at the present time it is very probable that it is.

In the fæces of 4 cases large numbers of the cercomonas intestinalis were found. These little parasites belong to the protozoa, and were first found by Zambl. They are pear-shaped organisms, possessing a nucleus and from 2 to 8 slender, hair-like flagella, which propel the parasites through the material containing them. They move about very actively, often turning completely about and then rushing ahead by a series of peculiar jerky movements. They were present in these cases in large numbers and undoubtedly aggravated the intestinal condition. They have been observed by Davaine in cholera dejections, by Marchand in typhoid, and by Zunker in 9 cases of diarrhea. They apparently thrive in a diseased intestine and probably cause diarrhea and perhaps ulceration. This view is supported by Zunker, Grassi, and Marchand. I have seen these organisms in the fæces of several cases of diarrhea before, but never in such numbers as in these cases, nor have I ever observed them in the fæces of a healthy person.

Tænia segments or ova were not observed in any of the cases, nor were distoma nor ascarides. The anchylostoma duodenale and their ova especially were looked for, but no evidence of their presence was discovered, the ova not being found in the fæces nor the worm in the intestines at the autopsy. The nematode worm, rhabdonema intestinale or anguillula stercoralis, was found in the fæces of one patient suffering from chronic dysentery. The clinical history of the case and the description of the parasite is as follows:

Clinical history: Private J. B., Battery D, Sixth Artillery, age 20. Father died of typhoid fever; mother died of pulmonary tuberculosis at the age of 45; one sister died in infancy; has one brother living. Patient had chills and fever about six years ago. He was taken with diarrhea in Raleigh, N. C., in May, 1898. The attack lasted three weeks. Went to Cuba in December, 1898, and had a second attack while there in February, 1899. The diarrhea has persisted since that time, save during May of this year, when he was some better. Went to Manila in July, 1899, and did duty, despite 10 to 12 movements a day, until October 20, 1899, when he was sent to the hospital. At times his stools have contained blood and he has suffered from tenesmus. He was admitted to this hospital December 19, 1899. Examination showed marked anæmia and emaciation (weight 105 pounds), general tenderness over abdomen, slightly enlarged and tender liver, spleen normal in size, heart and lungs normal. The tenderness in the abdomen is most marked around the umbilicus, and he gives a history of having severe cramp-like pains in this region three weeks ago, but none of any severity since. On December 28, 1899, since taking thymol, his appetite has increased. His bowels move now 7 to 8 times a day and he has gained about 7 pounds in weight.

*Microscopical examination.*—A specimen of fæces was sent to the laboratory on December 20 to be examined for the Amœba dysenteriæ. The fecal matter was semiformed, bright greenish in color, and contained no blood or mucus. Careful search was made for the amœbæ but none were found. In one preparation, however, two specimens of the nematode worm, the *Rhabdonema intestinale* or *Anguillula stercoralis* was found. These worms measure about 2 mm. long by 0.44 mm. broad, with pointed tails and mouths furnished with three lips; they move sluggishly about, and their structure could be easily made out. This worm was discovered by Normand, a French army surgeon, who found them in the excrements of French soldiers suffering from the so-called Cochin China diarrhea.

The history of the worm is briefly as follows: The mature worm lives in the intestinal mucous membrane of the duodenum and upper portion of the jejunum. Of the adult form only the female has been discovered. The female is easily distinguished by five or six elliptical eggs lying attached to one another about the center of the body near the vulva. The ova develop rapidly, and before the fæces leave the intestine the egg breaks and the minute embryos, measuring 0.2 to 0.3 mm. in length, are set free in the fæces. The ova are rarely found in the stools, and it is still more rare to find the adult worms. When the ova are found in the stools they occur in strings of three or more. Manson thus described the embryos after they leave the human body: "First, unless they gain access to nonputrefying fluid, they die; the fæces containing them, therefore, must mix freely with water. Second, if the temperature be low the embryo rhabdonema develops into a filariform larva, which, when swallowed by man, quickly assumes the parasite form. Third, if the temperature be high, the embryos develop into male and female rhabditic worms, and on being transferred to man become *R. intestinale.* These free mature rhabditic forms are what was formerly known as *Anguillula stercoralis.* They were found in fæces at post-mortem examinations and in the fæces after discharge."

The remarkable facts in this case are, first, that the worms occurring in the fæces are adult worms, and, second, no embryonic forms were found. No adult worms have been found in the fæces since the first examination. As to the pathological significance of their presence in the intestine, there is divided opinion. They were at first supposed by Normand and others to be the cause of Cochin China diarrhea. At the present time this theory has been abandoned, but the fact remains that they are only present in cases of chronic diarrhea, never being found in a healthy intestine, and are present in immense numbers, being found post-mortem, coiled up within or upon the intestinal follicles, the mucous membrane of the intestine being thickened, inflamed, and somewhat necrotic. It is impossible to believe that hundreds of these parasites could be present in the intestinal membrane without causing some pathological lesions, and it is not improbable that they at least aggravate intestinal disease, if they do not actually cause it. As to treatment, little can be said. The ordinary anthelmintics are wholly ineffective, and the only drug which has proved at all successful is thymol continued for a long time. In the case under consideration the administration of thymol has been followed by marked improvement.

Besides Cochin China, the *Rhabdonema intestinale* has been found in the West Indies, Brazil, Ceylon, Egypt, Bombay, Italy, and Germany. From the history it is impossible to say where infection took place in this case, but probably either in Cuba or in the Philippine Islands. At the writing of this report, two months after admission, the patient had not improved perceptibly, his diarrhea still continues, but no more adult worms have been found in the fæces.

Because of their diagnostic importance and the fact that they are often mistaken for other structures occurring in the intestinal tract, a brief description of the amœbæ of dysentery as observed here may be of interest. It is safe to say that among the parasites causing disease in man there is none which has been more often blamed unjustly for disease conditions than has the amœba coli. This is because it has so often been said to be present in the fæces when in reality it was not; other things slightly resembling it have been mistaken for it. Large intestinal epithelial cells, leucocytes, collections of anæmic blood corpuscles, monads, and the *cercomonas intestinalis* have all been gravely shown to me as the veritable amœba, and that by men otherwise well informed in such matters. To know the amœba one has to have seen it, and it is one of the most difficult of parasites to recognize from the common text-book description of it.

As is well known, Losch, in 1875, was the first to describe this organism, and numerous observers have since confirmed his researches. Among these may be mentioned Kartulis, Kruse, Koch, Manson, Councilman, Lafleur, Dock, and Leuckart. The organism belongs to the Protozoa, class Rhizopoda. It is simply a mass of protoplasm provided with a more or less distinct nucleus; hence the liability to mistake it for other similar unicellular organisms or even large cells. When at rest the organisms may be circular or oval in shape, if arrested while in motion may be irregular. It is more refractive than other cells occurring in the fæces, with the exception of the monads, and the protoplasm has a peculiar faintly greenish hue, almost like that of certain malarial crescents. Its size varies greatly, from 5$\mu$ to 35$\mu$ in diameter, but most of the amœbæ seen ordinarily measure from 15$\mu$ to 25$\mu$ in diameter. While many authorities claim that the amœbæ seen in any one case are all about the same size, this has not been my experience, and in the cases cited above the amœbæ differed widely, some being very large, others small. The shape, also, varies much, some being perfectly circular, others oval, and others irregular in shape. As ordinarily described, the organism is said to consist of two parts, an inner, granular portion, called the endoplasm, and an outer portion, called the ectoplasm. This description has been the cause for mistaking the organism for large cells, the inner portion corresponding to the granular nucleus and the outer portion to the protoplasm. As a matter of fact, this differentiation can not be made out in all cases by any means, and very seldom in an amœba, which is not motile. While doubtless the two portions mentioned exist, yet too much stress is laid upon them, resulting in confusion, as only the experienced observer can in most instances distinguish them. The organism possesses a nucleus, but this is often difficult to make out, especially in moving amœbæ. It is situated somewhat to one side and is very refractive; its outline is often more or less irregular. The endoplasm forms most of the substance of the organism, is of a peculiar faint greenish hue, very finely granular, resembling finely ground glass, and generally shows a number of perfectly circular or oval so-called vacuoles. The vacuoles are spaces within the protoplasm of the organism, clear cut in outline, and collected together in groups. Many of them seem to contain two or four very refractive dots resembling micrococci. Although these spaces are generally called vacuoles, it is by no means certain that they are so. Certainly they do not resemble the vacuoles in blood corpuscles, and it always appears as though they do not penetrate entirely through the organism, their floor seeming to be formed by a thin veil-like layer of protoplasm. It is impossible to believe that these peculiar spaces are vacuoles, and it is by no means settled that they are so. These spaces vary slightly in size and in number in different amœbæ. The small amœbæ seldom show any, but the large ones seem often to consist of a collection of them surrounded by a small amount of the protoplasm. It would seem from this that such an amœba might be a sporulating body, as the oval spaces resemble very strongly the segments of the sporulating malarial plasmodia. The amœbæ generally show more or less material within their protoplasm, which they have absorbed. They often contain red blood corpuscles, bacteria, pigment particles, etc. Often these inclusions are so numerous that the structure of the amœba is entirely hidden. When it can be seen the ectoplasm consists of a narrow rim of a clear, light-green color surrounding the darker endoplasm.

Now, as to the mobility of the amœba. It is always motionless in fæces which have not been kept warm, as a temperature below 75° F. renders it immotile, but it is often possible, after preparing a specimen upon a slide from such fæces, to render the organism motile by gently warming the slide over an alcohol lamp. The motility of the organism varies, but it is generally a slow amœboid motion, it throwing out rounded protoplasmic processes, exactly as does the leucocyte. These processes are always perfectly clear and formed by the ectoplasm, and these are often the only portions of the organism which show the differentiation into ectoplasm. In rare instances the movement is rather rapid, the processes being thrown out quickly and the whole organism moving in an eccentric, jerky manner. More often, however, the change in position is very gradual, and only careful watching will detect it. Often, also, the organism does not change its position, but merely its shape, the protoplasmic processes being projected and retracted, sometimes so very slowly that only close scrutiny will detect it. Often, also, a peculiar undulatory motion of the border of the organism is noted, exactly like that occurring in the malarial parasites.

When the temperature is that of the body the amœbæ are most active and progress by an almost imperceptible projection, and flowing into such projection of the mass of the organism. When, however, the temperature is low it can be seen that the protoplasmic projection gradually becomes larger, until at last the granular endoplasm flows into it. This process is repeated, and thus the organism alters its position.

The color and the refraction of the amœba should serve to distinguish it from cellular material, as intestinal epithelium, it being of a peculiar faint-green color and very refractive, which is marked enough so that even with a two-thirds objective it can be picked out from the surrounding cellular matter. These properties, however, do not seem to distinguish it from the monas and cercomonas, which are also greenish in color and refractive, but they are much smaller than the large amœba and much more actively motile, not throwing out protoplasmic processes, but moving by means of flagella. To one who has seen the amœba these organisms could never be mistaken for it, but mistakes have been made often when the observer had only the text-book description to guide him. To sum up, then, the amœba is a round, oval, or irregular protoplasmic body, varying in size; motile or immotile, the motility amœboid in character when present being generally moderate; pale or faint green in color; refractive, with a sharply cut border, and containing circular or oval lighter colored spaces, known as vacuoles. In some a darker colored nucleus can be distinguished, and in the immotile organisms a darker colored central or eccentric portion, containing the vacuoles and comprising the greater part of the parasite, and known as the endoplasm, can be seen surrounded by a narrow or much smaller layer, lighter in color and clear, known as the ectoplasm.

Nothing is known as to the method of reproduction of the parasite, but it is generally believed to be by sporulation. If this is so, it is probable that the so-called vacuoles are in reality spores, the mother parasite eventually rupturing, and thus setting them free. Reasoning from what occurs in other similar organisms, this is the most probable method of reproduction. It is impossible, in observing a large circular amœba, filled with the oval or round spaces so that only a thin strip of protoplasm remains visible, to resist the impression of its resemblance to the large segmenting tertian plasmodia, just before the segments separate and become free. Another interesting analogy between the two parasites is that in both a solution of sulphate of quinine arrests all motion immediately and destroys them.

It is not a very difficult matter, where the amœbæ are numerous in the fæces, to obtain good stained specimens if sufficient care be taken in their preparation. While undoubtedly the amœbæ show to greater advantage when stained in sections of tissue, yet the method of staining them in fæces is most practicable and useful, and if the smears are made sufficiently thin the organisms will show very perfectly. So little is said in the recent text-books regarding the appearances presented by the stained amœbæ that a somewhat detailed account of their staining reactions is of interest. Like all protozoan organisms, the nucleus stains with more or less difficulty, but I have found that carbolic fuchsin stains it, as well as the nucleolus, very easily and deeply, while methylene blue stains it dimly and often not at all.

I have tried a large number of different staining solutions, but have found that only three are really worthy of use, in that they are sure, rapid, and show the minute structure of the amœba well. These are: Loeffler's methylene blue solution, carbolic fuchsin solution, and thionin solution. Of these solutions Loeffler's methylene blue is the quickest and best stain for general use, while the carbolic fuchsin solution is by far the best where it is desired to stain the nucleus and nucleolus, as well as certain peculiar bodies within the protoplasm of the amœba. The thionin differentiation method recommended by Mallory, which often gives beautiful results in staining amœbæ in tissue, gives but fair results in the staining of the organisms in fæces, and can hardly be said to be differential, as other structures in the fæces take and hold the stain. It is a useful stain, but methylene blue is far better and much more easily applied.

Having found a specimen of fæces containing numerous amœbæ, the smears are prepared as follows: Several cover glasses are thoroughly cleaned and placed in a row upon the table. With a sterilized platinum loop a small flake of mucus is picked out of the fæces and placed upon a cover glass. This is repeated, a minute flake of mucus being placed upon every other cover glass. The intervening clean cover glass is then dropped gently down upon the glass containing the mucus, and then the two are slid apart, very gentle pressure being used in doing so. By proceeding in this way a dozen or more very even smears can be secured in a few minutes time. The smears are then placed face up in equal parts of alcohol and ether and allowed to harden for thirty minutes. If the fæces are warm when the preparations are made, many of the amœba will be hardened while undergoing amœboid motion. After hardening the smears are ready to be stained.

*Loeffler's alkaline methylene blue solution.*—The smears are stained in solution for from three to eight or ten minutes; about five minutes gives the best results. They are then washed in distilled water and mounted in Canada balsam. The amœbæ take the blue stain very well, staining almost as deeply as the nuclei of the epithelial cells. In such stained preparations three stages of the amœbæ can be detected. The small amœbæ, staining comparatively uniformly; larger ones, staining less uniformly and containing one or more vacuoles, and still larger ones, riddled with vacuoles, staining very deeply. The smaller or young amœbæ stain much more intensely than the larger ones, and with the methylene blue seldom show a nucleus. No vacuoles can be seen, nor do they often contain red blood cells. The protoplasm is of a rather dark-blue ground color, with small oval or round lighter blue areas, but stain almost uniformly throughout. No distinctions can be traced between the ecto and endoplasm. These small amœbæ are generally round, but sometimes show small pseudopodia, which generally stain very intensely. Some of the small amœbæ show a peculiar mottled appearance, light and dark stained areas alternating throughout their protoplasm. These small forms are evidently young amœbæ. In all the preparations the most numerous forms of the amœbæ are those now to be described. They are large, generally round or oval in shape, although if the preparations are made when the amœbæ are active many of them are irregular in shape and showing pseudopodia. The protoplasm of these amœbæ stains irregularly, but there can be no distinct differentiation into ecto and endoplasm made. One portion of the amœba stains very densely, and there is a gradual shading off into a lighter blue color. In the irregular forms this is most noticeable, the pseudopodia staining very dimly, due to the fact that they are composed of ectoplasm, which takes the stain lightly. Some of the pseudopodia, however, stain very intensely, due, probably, to the fact that the endoplasm had flowed into them just before hardening. These fully grown amœbæ show from one to three or more large vacuoles, which are entirely unstained, but besides these there are numerous small oval or round, very dimly stained areas scattered throughout the protoplasm, which are evidently not vacuoles, and correspond to the same areas observed in the very young forms. Scattered between the oval, dimly stained areas are very deeply stained small portions of protoplasm. The staining phenomena of these amœbæ exactly resemble those of the large segmenting tertian malarial plasmodia. The vacuoles and the dimly stained areas are entirely distinct, the dimly stained areas being oval or round, much smaller than the vacuoles, having a dim outline, and evidently not penetrating the organism, as do the vacuoles. Many of these amœbæ contain red blood cells which do not stain, but show as round or irregular light areas scattered through the protoplasm of the parasite. In a few of the amœbæ very deeply stained, almost black, oval-shaped structures can be seen, generally arranged near the periphery of the organism and resembling bacilli, save that they are too large and are often irregular in shape. In preparations stained for some time some of the large amœbæ show a very deeply stained, almost black nucleus. Surrounding this nucleus is sometimes seen a more lightly stained area with a deeply stained, almost black border. Besides blood corpuscles, the protoplasm of these amœbæ contains numerous more deeply stained, almost black granules and rods and dots which are evidently bacteria of various kinds. Besides the two forms of amœbæ described, large round forms are seen, containing numerous vacuoles and staining more or less dimly. No nucleus can be demonstrated in these forms, nor can the small oval unstained areas be seen. In most instances these amœbæ are simply riddled with vacuoles, the amœba consisting of a stained shell perforated by vacuoles. Many of these show evidences of fragmentation. These are probably degenerate amœbæ undergoing, just as does the plasmodium of malaria, vacuolization and fragmentation. It is a significant fact that such amœbæ never show any inclusions in the way of blood corpuscles or bacteria.

Smears are stained with carbol fuchsin for from five to ten minutes, washed in water, and mounted in Canada balsam. This stain is especially useful in demonstrating the nucleus, which stains very beautifully. The same structures are seen in amœbæ stained by this method as by methylene blue, but, in addition, the nucleus, nucleolus, and certain other details can be made out. The nucleus stains a deep red, is usually situated eccentrically near the edge of the parasite, probably at the juncture of the ecto and endoplasm, but it may be more central. It contains a small, more deeply stained nucleolus and a few almost black granules, while the nuclear substance contains minute, more deeply stained areas. The nucleus is oval in shape and regular in outline. As noted before, the large amœbæ, containing great numbers of vacuoles, do not show any nucleus.

Besides the nucleus and its contents the fuchsin stain demonstrates within the protoplasm of many of the amœbæ some very peculiar bodies, the nature of which it is impossible to conjecture. Scattered irregularly through the protoplasm are variously shaped particles stained a deep, brownish red, and especially numerous near the nucleus. These particles are oblong in shape, as a rule flat, and much larger than any bacterium. They present often a fractured extremity, as though they were crystalline in structure, and it may be that they are certain crystals absorbed from the fæces.

In all preparations from the fæces, however stained, amœbæ are seen evidently undergoing fragmentation. Numerous knob-like outgrowths are seen almost entirely separated from the parasite, and some which are separated. These fragments stain deeply, and the fragmenting parasite usually shows a normal appearing nucleus, thus showing that the process is a degenerative and not a reproductive one.

Little need be said of the thionin stain. It gives similar results to those just described, and is not nearly as satisfactory as the methylene blue or carbolic fuchsin.

This much can be said to have been demonstrated by the study of stained specimens of the amœbæ:

1. That vacuolization is a degenerative process, as the young amœbæ show no vacuoles, the full-grown, healthy ones few, while the amœbæ in which they are

most numerous are degenerate bodies, showing neither a nucleus nor inclusions of any kind.

2. That there occur in all but the degenerate forms of amœbæ small round or oval unstained areas, uniform in appearance, and most numerous in the large, full-grown forms, and entirely absent in the vacuolated shells of amœbæ. These areas resemble the same areas observed in stained segmenting malarial plasmodia which are in them, due to the young spores, which take the stain but faintly. Reasoning from analogy, it may be seen that these areas in the amœbæ are also spores.

3. That in the protoplasm of the amœbæ there occur peculiar structures, evidently not bacterial in nature, the significance of which it is impossible to decide. It may be that they are certain crystals which occur in the fæces and which have been absorbed by the amœbæ.

I have continued experimental work upon the bacillus which I separated from 3 cases of dysentery in cultures from the intestinal ulcerations and spleen, with especial reference to the agglutination reaction of the bacillus with the blood of cases of dysentery. Of 10 cases of dysentery which were in serious condition in that they were all bed cases and having numerous bowel movements, 9 gave a marked agglutination reaction in a dilution of 1 to 30 within ten minutes, and the 1 remaining gave a slight reaction in the same dilution in fifteen minutes. Of 10 cases of convalescent dysentery, 6 gave a reaction within fifteen minutes. Thus of 20 cases diagnosed as dysentery 16 gave a reaction with the dilution of 1 to 30 within fifteen minutes. These results were very interesting, and undoubtedly show an etiological relation between this bacillus and dysentery.

I have also been able to compare my bacillus with a culture of the bacillus which Professor Flexner separated from dysentery cases in Manila, and which he has kindly sent me, and find that the bacillus which I have separated from cases here is identical with his, and, furthermore, that in all the above agglutination tests bacilli from both his and my culture gave the same results.

I will report further upon this subject, especially as to the results of inoculation of guinea pigs with the bacilli in question.

*Examination of cultures.*—Cultures have been inoculated and examined from 46 cases of suspected diphtheria, of which 13 proved positive, the Klebs-Loeffler bacillus being found, while 33 proved negative.

*Examination of post-mortem material.*—Since November 1, 1899, I have embedded in paraffin and cut sections of all diseased organs in every case coming to autopsy at this hospital. Organs have been sectioned and preparations mounted from such organs. While this has entailed much work upon the laboratory, I feel that it is more than repaid by the accurate and complete pathological record which such work has enabled us to make.

The microscopical findings in the cases have been added to the post-mortem records and forwarded each month to the Surgeon-General of the Army.

*Miscellaneous examinations.*—Twenty-four miscellaneous examinations have been made. These examinations include work upon the influence of anæsthetics, upon the composition of the urine, and the use of nuclein in chronic malarial infection. This work will be reported upon as soon as possible.

The laboratory is well supplied with all necessary apparatus, which is in good condition.

There have not been as many special investigations carried on in the laboratory as would be desirable, or as there were opportunities for, due entirely to the time which the routine work in the laboratory requires.

## HOSPITAL SHIPS.

*The Relief.*—During the past year the hospital ship *Relief* has been on duty in connection with military operations in the Philippine Islands. Experience had shown that this vessel did not have a sufficient coal-carrying capacity to undertake the voyage across the Pacific without some risk. She was therefore sent to Manila for duty in the Philippine waters. The following report, dated June 30, 1900, by Maj. H. O. Perley, surgeon, United States Army, to the chief surgeon, Division of the Philippines, shows the value of the services rendered by this vessel:

On January 1, 1900, the ship was lying in Manila Bay, as a floating hospital, with 107 sick and wounded officers and men, collected on our trip in December, 1899, from

Dagupan, San Fernando de Union, San Fabian, Vigan, and all ports in northwest Luzon. They were the seriously wounded and sick from the commands of Generals Young and Wheaton, who had just made very severe and exhausting campaigns in the north.

On the 13th of this month we proceeded, under your orders, to Bacoor, Niac, and Batangas, south Luzon, taking off the wounded and sick from General Schwan's command as they progressed southward, and furnishing medical and surgical supplies for the hospitals established at the different places, as well as for the moving command. From Batangas we returned to Lemeri and Taal, established a field hospital there from the supplies on board, and took off the sick and wounded. We returned to Manila January 27, having 222 patients on board. As the *Relief* had not been docked or repaired since September, 1899, it was deemed necessary that we should proceed to Hongkong (the nearest suitable place for the purpose), and in compliance with your orders we put in coal, provisions, and an abundance of medical and surgical supplies and vaccine virus. We left Manila February 7, touching at the ports of Subig, Iba, Dagupan, San Fernando de Union, Vigan, and Aparri (all seaport and garrisoned towns). We left an abundance of supplies at each place, and from Aparri went direct to Hongkong, China, where we arrived on the 13th of February, having on board at the time 73 convalescent patients. On account of the crowded condition of the dockyard we were obliged to remain three weeks, and even then the repairs were not satisfactorily done.

While in Hongkong the ship was carefully inspected by many foreign officers, both line and medical, and their admiration for her fittings and general usefulness as a floating military hospital was outspoken. We left Hongkong March 4, and revisited Aparri, Loag, Vigan, San Fernando de Union, Dagupan, Iba, and Subig on our return, taking off the patients who were selected for discharge on surgeon's certificate of disability or who required the aid of a specialist in Manila. In all, 44 patients were collected on this trip. At every place we stopped the medical department was carefully inspected and a report rendered to you.

From March 12 to 25 the ship was a floating hospital in Manila Bay. On the latter date, after having taken on an abundance of supplies, both medical and surgical, vaccine virus, and water filters, the ship started south. We had when we left Manila 8 convalescents on board.

The following ports were visited, and at each supplies as required were put off, and patients, particularly those who were selected to go to the United States and those requiring the aid of a specialist, were taken on board. Vaccine virus and water filters were furnished as needed: Nasugbu, Lemeri, Taal, Batangas, South Luzon Island; Iloilo, Kapiz, Panay Island; Bacalod, Dumaguete, Negros Island; Jolo, Sulu Island; Port Isabela, Basilan Island; Zamboanga, Cotta Bato, Dapitan, Iligan, Cagayan, Mindanao Island; Cebu, Cebu Island; Romblon, Romblon Island.

Our arrival at Cagayan, Mindanao, was very opportune. There had been an unexpected midnight attack on the garrison forty-eight hours before our arrival, and the hospital was filled with severely wounded men. These were taken on the *Relief*, their wounds re-dressed, and the patients cared for. Supplies were put off in abundance for the hospital.

It was your intention that the ship should also include the ports in Leyte, Samar, and southeastern Luzon on this trip, but the scarcity of water and our inability at the time to obtain coal rendered it necessary for us to return to Manila, which we did, arriving on the 21st of April.

The medical department of every post visited was carefully inspected by Maj. Frank R. Keefer, surgeon, United States Volunteers, who was detailed by you for this purpose. Patients were collected from the different ports. On April 26, after having taken on medical and surgical supplies, the necessary coal and water, etc., we left Manila to complete the southern trip.

The following ports were visited: Romblon, Romblon Island; Baibai, Okmoc, Leyte Island; Tacloban, Catbalogan, Kalbayok, Samar Island; Legaspi (Albai Gulf), Nueva Caceres, Tobaco, Sorsogon, Donsol, Lucena, southeast Luzon.

Supplies were furnished, the selected patients taken off, and vaccine virus and water filters were given out as required. At each station from which it was found that small substations were regularly supplied by the quartermaster's boats supplies in sets were furnished.

The *Relief* returned to Manila on the evening of May 10, and from that date to the 31st she was lying as a floating hospital in Manila Bay.

From January 1 to May 31, 1900, the ship traveled 6,375 nautical miles, and although at times in very rough weather and in uncharted regions, we have fortunately met with no accident. In coming away from the China coast we ran into a very hard blow, but the ship showed her seaworthiness.

The following table exhibits the work done:

| | |
|---|---|
| Sick on board January 1, 1900 | 107 |
| Sick on board May 31, 1900 | 194 |
| Sick received between January 1 and May 31, 1900 | 743 |
| Sick returned to duty between January 1 and May 31, 1900 | 408 |
| Sick died on board between January 1 and May 31, 1900 | 10 |
| Sick sent to United States between January 1 and May 31, 1900 | 69 |
| Sick transferred to other hospitals | 166 |

When it is remembered that only serious cases have been transferred from the post hospitals to this ship, the large number returned to duty and the small number of deaths on board illustrates better than words the necessity of a floating hospital fitted up with all modern appliances in these islands. I know of no means of treatment which will restore debilitated men, worn out with hard marching and malaria, quicker to duty than a sea trip and good food.

The special-diet kitchen on the ship has been our main reliance in the treatment of most of our chronic dysentery cases, and the results have been very satisfactory.

The value of a hospital ship in these islands can not be expressed in statistics. To be able to furnish all needed supplies to the seaport garrisons, which are otherwise inaccessible, is a matter of great importance. To take off the wounded and sick of a marching column and to meet them at designated places with all the necessary supplies, thus relieving the general commanding of anxiety for and care of the wounded, is, as one general officer expressed to me, "a marked advance in modern warfare, if not in humanity."

In concluding this report I can not but express my appreciation of the skill and care exercised by Captain Harding, sailing master, and the ship's officers and crew, in navigating the ship and in making the dangerous landings. Twice we have been under fire in bringing off the wounded, and every man of the sailing crew did his duty.

*The Missouri.*—As stated in my last annual report, the hospital ship *Missouri* sailed for Manila by the eastern route September 30, 1899, with a full staff of medical officers, hospital corps men and nurses, members of the Hospital Corps en route for service in the Philippines, and stores of medicines and medical and hospital supplies and property. She arrived at Manila, after an uneventful voyage, November 28, 1899, and on December 31 sailed for San Francisco, Cal., having on board 269 patients, 13 of whom died before the vessel reached her destination on February 13, 1900. Here it was reported that the repairs necessary for the continuance of this ship in service would cost a considerable sum and would occupy much time. Meanwhile the Quartermaster's Department had established a fine line of transports between San Francisco and Manila, each of which had a well-equipped hospital. Sick men in numbers not to exceed the capacity of each vessel could be returned comfortably to the United States on these transports. I therefore recommended the disuse of the *Missouri* as a hospital ship, and she was accordingly turned over to the Quartermaster's Department.

The *Terry* was at one time proposed as a suitable vessel for hospital purposes in Cuban waters; but the conditions in Cuba became so changed that it did not appear to me to be necessary to secure a hospital ship in place of the *Aid* for service in connection with the troops in garrison in that island.

## HEALTH OF THE ARMY.

### HEALTH OF THE ARMY IN 1898.

In my last annual report I submitted the medical and surgical statistics of the Regular Army for the calendar year 1898. It was not practicable at that time to present the statistics of the Volunteer Army for the same period. The act of Congress approved April 22, 1898, which authorized the President to raise a volunteer force, required the medical records and reports of these troops to be deposited with the Record and Pension Office. This had accordingly to be done before it was possible for the clerical force at my disposal to use the records for statistical purposes. Arrangements were subsequently made, however, with the chief of that office by which I was enabled to card and check the cases from the sick reports of the State volunteers. It was my desire to have presented these statistics as a supplement to my last annual report, but the work involved in classifying and tabulating so large a number of cases additional to those of the calendar year 1899 could not be completed until my present report became due. I therefore submit in this report the delayed statistics of the volunteer force for 1898, together with those of the Regular and Volunteer armies for the calendar year 1899.

During the year 1898, 217,072 cases of disease and injury were reported by our medical officers serving with volunteer troops. This is equivalent to 2,145.83 admissions to sick report during the year for every thousand men present in the command, or a little over two entries on sick report per man. Of this admission rate 2,037.20 were caused by disease and only 108.63 by injuries. Malarial fevers and diarrheal diseases constituted a little over one-half of the admissions, the rate for the former having been 573.56 and for the latter 453.10. The entries for typhoid fever numbered 16,796, equivalent to an admission rate of 166.03 per thousand men during the year. The rate for yellow fever was 5.58 per thousand; for measles, 61.46, and for smallpox a total of 73 cases gave a rate of only 0.72 per thousand men.

Of the 10,989 injuries reported, one-tenth were considered due to exhaustion from exposure and fatigue. It is an interesting fact that more men were ruptured than injured by gunshot. The former numbered 795, the latter 600, giving rates, respectively, of 7.86 and 5.93 per thousand of strength.

In the Regular Army in 1898 the admission rate, 2,146.94 per thousand of strength, was the same as in the Volunteer Army, but the ratios of the causes of admission were not identical. Disease caused a rate of 1,937.71, and injury 209.23. On account of the service of so large a proportion of the regular troops in Cuba, malarial infection was the cause of nearly one-third of the whole number taken on the sick reports, the admission rate for these diseases having been 694.64 cases for every thousand men of the strength. Diarrheal diseases constituted one-seventh of the cases admitted. The entries for typhoid fever numbered 4,130, equal to 88.56 per thousand men. The rate for yellow fever was 12.95, for measles 25.09, and for smallpox 0.40.

Of 9,758 injuries, only 308 were reported due to exhaustion from exposure and fatigue; 1,457 were gunshot wounds, giving a rate of 31.24 per thousand men, and 255 were cases of hernia, equaling a rate of 5.47.

The total number of discharges for disability in the Volunteer Army was 1,506, equal to an annual rate of 14.89 per thousand men. The rate for disease was 12.60; for injury 2.28. The largest individual rates were for venereal cases, 1.51; for consumption, 1.17; for hernia, 1.13, and for rheumatism 1.11.

The rate of discharge for disability among the regular troops was 11.58 per thousand men—for disease, 7.40; for injury, 4.18. Hernia occasioned a discharge rate of 1.22, rheumatism 1.05, consumption 1.01, and venereal diseases only 0.02.

The total number of deaths among volunteers admitted to sick report in 1898 was 2,851, equal to an annual rate of 28.18 per thousand men. Of these deaths 2,664, or 26.33 per thousand men, were due to disease, and 187, or 1.85 per thousand men, to injuries. Typhoid fever caused the largest number of deaths, 1,738, equivalent to 17.18 deaths per thousand men. Gunshot wounds occasioned 1.17, malarial fevers 1.96, diarrheal diseases 1.29, yellow fever 0.73, and injuries other than gunshot 0.68, leaving 5.17 for distribution among all other causes of fatality to make up the total death rate of 28.18 per thousand men during the year.

With the statements made in the last paragraph the following concerning the regular troops in 1898 may be compared:

The total number of deaths was 1,285, equal to a rate of 27.55 per thousand men. The death rate from disease was 22; from injury, 5.55. The largest individual item in the death rate was 9.74 deaths from typhoid fever in every thousand men. Gunshot wounds occasioned a death rate of 3.94; malarial fevers, 3.24; diarrheal diseases, 2.14; yellow fever, 1.50, and injuries other than gunshot, 1.61, leaving 5.38 for distribution among all other causes of fatality to make up the total death rate of 27.55 per thousand of men for the year.

In the year 1897, a year of peace, the death rate from all causes was 5.11, and the average annual rate for the previous decade was 6.99. The contrast here requires no comment.

In 1898 the volunteer troops serving in the Philippine Islands had the lowest admission rate, 1,832.10 per thousand of strength; those serving in Cuba the highest, 4,070.34, while the rate in Porto Rico, 2,175.92, did not differ much from that of the troops in the United States, 2,071.65. The high rate in Cuba was due to the excessive prevalence of malarial fevers, the rate for which alone amounted to 2,555.02, and yellow fever added 121.72 to the rate; but the admission rates for most other diseases were either not in excess or were actually lower than those of the Volunteer Army as a whole. Thus the rate for diarrheal diseases was 372 as compared with 453.10 among the volunteers generally, and that for the diseases of the respiratory organs was 43.88 as compared with 134.02. The volunteers in Cuba had also the highest death rate, equivalent to 86 per thousand of strength, the rate for disease being 73.65 and for injury 12.35, gunshot wounds having contributed 11.91 of the 12.35. The fatal diseases were typhoid fever, which caused a death rate of 22.05 per thousand men; yellow fever, which occasioned a rate of 15.88; malarial fevers, 14.77, and diarrheal diseases, 9.26, these four items constituting 61.96 of the total rate for disease—73.65.

Among the regular troops in Cuba in 1898 the death rate was exceedingly high, 98.16 per thousand men as compared with their admission rate of 2,631.76. This means that during their service on this island slight cases were infrequent, or, which is more likely, were not taken upon sick report. The death rate from disease was 61.15; from injuries, 37.01, gunshot wounds having contributed 33.33 of the latter rate. The fatal diseases were typhoid fever, which caused a death rate of 14.17; yellow fever, which occasioned a rate of 17.57; malarial infections 13.12, and diarrheal diseases 9.97.

The volunteers in Porto Rico in 1898 had a death rate of 52.09, of which 49.43 was caused by disease. Typhoid fever was the deadly factor, it being held responsible for 40.66 deaths per thousand of strength. But for this epidemic of typhoid fever among these troops their medical record would have been comparatively good.

The regular troops also suffered from this epidemic, their total death rate having been 41.45 and their rate from disease 39.38, of which 22.80 was caused by typhoid fever and 5.70 by malarial diseases.

The volunteer troops serving in the Philippines in 1898 had an admission rate of 1,832.10 per thousand men, 1,719.73 from disease, and 112.36 from injury; 422.47 from malarial diseases, and 398.63 from diarrheal diseases. The death rate, 24.70 per thousand men, was constituted by 21.27 occasioned by disease and 3.43 by injury, 2.86 of the latter being the results of gunshot injuries. Typhoid fever caused deaths equivalent to 9.28 per thousand for the year; diarrheal diseases, 2.86; smallpox, 2.14, and malarial fevers, 1.43.

Among the regular troops the death rate in the Philippines was 22.74, 18.60 from disease and 4.13 from injury, 3.10 of the latter from gunshot. Typhoid fever caused a death rate of 7.58; smallpox, 2.07, and malarial fevers and diarrheal diseases 1.72 each.

Among volunteers serving in the United States in 1898 the death rate amounted to 24.41 per thousand of mean strength for the year, of which 23.29 was due to disease and 1.11 to injury. Typhoid fever was the prominent cause of death, 16.59 of the total rate having been reported as due to it. The rate caused by malarial fevers was 1.26, by pneumonia 1, and by diarrheal diseases 0.60.

The death rate of the regulars in the United States in 1898 was 20.14, 17.45 from disease and 2.69 from injuries, of which 1.21 were from gunshot. Typhoid fever caused a rate of 8.79; malarial fevers, 2.24, and diarrheal diseases, 1.39. A large proportion of the cases which gave the high death rate from disease were imported by the regular troops from Cuba.

### HEALTH OF THE ARMY IN 1899.

During the calendar year 1899 there were 229,885 admissions to sick report recorded in a mean strength of 105,546 regulars and volunteers. This is equivalent to a rate of 2,178.06 per thousand of strength, as compared with 2,146.18 per thousand during the year 1898 and with 1,236.66, the mean annual rate of the decade 1888–1897. Of the admission rate for the year, 714.99 was constituted by malarial diseases, 380.69 by diarrheal diseases, and 192.48 by injury, of which 21.56 admissions per thousand men resulted from gunshot. Typhoid fever contributed only 20.69 cases per thousand of strength. Of the admission rate for 1898, malarial fevers constituted 611.78, diarrheal diseases 388.62, injuries 140.38, of which only 13.92 resulted from gunshot. Typhoid fever contributed 141.59 cases per thousand of strength.

The number of discharges for disability in 1899, 2,320, constituted 21.98 per thousand of the strength, as compared with 14.13 in 1898 and with 16.57, the mean annual rate of the preceding ten years. The principal causes and the rates contributed by each were: Gunshot wounds

2.14, other injuries 2.33, venereal diseases 2.61, consumption 1.80, rheumatism 1.52, heart disease 1.37, malarial diseases 1.10, and diarrheal diseases 0.90. The principal causes of the discharge rate of 1898 were: Gunshot wounds 0.77, other injuries 2.11, rheumatism 1.15, consumption 1.12, venereal diseases 1.05, diarrheal diseases 0.44, and malarial fevers 0.43.

The deaths in 1899 amounted to 1,945, equal to a rate of 18.43 per thousand, as contrasted with 27.99 during the year 1898 and with 6.69, the mean of the preceding decade. The principal causes of death and the rates per thousand men contributed by them were: Gunshot wounds 5.10, other injuries 1.57, typhoid fever 2.44, diarrheal diseases 2.14, malarial diseases 0.99, pneumonia 0.94, and variola 0.80. The prominent causes of death and the rates contributed by them in 1898 were: Typhoid fever 14.83, gunshot wounds 2.04, other injuries 0.98, diarrheal diseases 1.45, malarial infections 0.97, and pneumonia 0.92.

Troops serving in Cuba had the highest rate of admission, 2,749.74 per thousand, as against 3,413.54 per thousand in 1898, the result of exposures during the active service of the Santiago campaign. The lowest admission rate during the past year, 1,677.51, was given by troops serving in the United States, but this, which must be regarded as a high rate when contrasted with the rates of the preceding years of peace, together with the still higher rate, 2,062.82, given by troops in the United States in 1898, was due to sickness brought home from service in the islands. The high rate of discharge for disability at the home stations is attributable to the same cause. The highest death rate during the past year, 30.58 per thousand men, was reported from the Pacific Islands. One-half of this was caused by injuries, gunshot injuries being responsible for the death of 12.60 men per thousand of strength. The highest death rate in 1898, 91.55 per thousand, was reported from Cuba; of this rate, 67.94 was caused by disease and 23.61 by injury, gunshot injury being responsible for the death of 21.69 men per thousand of strength.

*Rates of the regulars and volunteers in 1899 compared.*—During this year from the Regular Army, having a mean strength of 64,446 officers and men, there was admitted to sick report a total of 150,949 cases. This is equal to a rate of 2,342.26 per thousand of strength. Of this rate, 2,125.74 was due to disease and 216.52 to injury. Malarial diseases occasioned 633.31 of the admission rate; diarrheal diseases, 414.39. Typhoid fever caused a total of 1,481 entries, equivalent to 22.98 per thousand men. Measles gave a rate of 23.54 and smallpox a rate of 2.11 per thousand men. Of 13,954 injuries, 762 were due to fatigues and exposures, making a rate of 11.82 per thousand of strength; 1,016 cases, or 15.76 per thousand men, were gunshot injuries, and 488, or 7.57 per thousand, were cases of hernia.

During the year 1899, 78,936 cases of disease and injury were reported as having occurred in the Volunteer Army, the mean strength of which was 41,100. This is equivalent to an admission rate of 1,920.49 per thousand men, or rather less than 2 entries per man during the year. Of this rate, 1,765.72 was caused by disease and 154.77 by injury. Malarial diseases occasioned one-fourth of the admissions, the rate for these diseases being 482.02; diarrheal diseases also were prevalent, the rate being 337.26, but both of these rates are considerably smaller than the corresponding rates of 1898. The entries for typhoid fever numbered 703, equal to an admission rate of 17.10 per thousand men. Only 5 cases of yellow fever appear upon the records of this year. Measles gave a rate of 30.12 per thousand men, and 211 cases of smallpox occasioned a rate of 5.13 per thousand. Of 6,361 injuries reported, 714 were due to fatigues and exposures, making a rate of 17.37 cases per thousand of strength; 1,260 cases, or 30.66 per thousand men, were gunshot injuries, and 317, or 7.71 per thousand, were cases of hernia.

Discharges of regular soldiers on account of disability in 1899 amounted to 1,767 cases, 372 of which were cases of injury, equal to the respective rates of 27.42 and 5.77 per thousand of strength. Venereal diseases caused 3.19 of the total rate; gunshot wounds, 2.73; consumption, 2.30; heart disease, 1.88; rheumatism, 1.72, and hernia, 1.49.

The discharges on account of disability in the Volunteer Army amounted to a total of 553 cases, equal to a rate of 13.45 per thousand of strength, of which 11.02 was due to disease and 2.43 to injury. Venereal diseases caused 1.71 of this rate; gunshot wounds, 1.22; rheumatism, 1.12; consumption, 1.02, and hernia, 0.71.

The number of deaths from all causes among the troops of the Regular Army amounted to 1,202, equivalent to 18.65 per thousand of strength; 380 of the deaths, constituting 5.90 of the total death rate, were due to injury and 248, or 3.85 per thousand, to gunshot wounds. The principal diseases which caused this mortality were typhoid fever, with 180 deaths, giving a rate of 2.79 per thousand men, and diarrheal diseases, with 152 deaths, causing a rate of 2.36.

The number of deaths reported from the Volunteer Army was 743, of which 324 were due to injuries and 419 to disease. The death rate from all causes was 18.08; from disease, 10.20; from injuries, 7.88. The principal causes of this mortality were diarrheal diseases, which contributed 1.95 to the rate; typhoid fever, 1.90; smallpox, 1.44; pneumonia, 1.22; malarial fevers, 1.05, and gunshot injuries, 7.06.

The regular troops in Cuba in 1899 had a mean strength of 11,969 officers and men, from which 35,401 cases were admitted to sick report, the equivalent of 2,957.73 per thousand of strength. Of this rate, 2,690.77 was due to disease and 266.94 to injuries, only 3.09 being caused by gunshot. Malarial fevers constituted 1,132.76 of the total admission rate; diarrheal diseases, 475.82, and venereal diseases, 171.28. Three hundred and five men were discharged for disability, 234 by disease and 71 by injury, equivalent to the respective rates of 25.48, 19.55, and 5.93 per thousand of strength. Discharge was caused by venereal diseases in 3.25 per thousand of strength, in 2.59 by heart disease, in 2.51 by consumption, and in 1.17 by gunshot wounds. The death rate from all causes was 19.55, of which 17.29 was caused by disease and 2.26 by injury. Typhoid fever occasioned 63 deaths, equivalent to a rate of 5.26 per thousand men; yellow fever, 50 deaths, equivalent to 4.17 per thousand, and malarial infections, 20 deaths, equivalent to a rate of 1.67.

The volunteers in Cuba during this year, with a mean strength of 8,082, had an admission rate of 2,441.72 per thousand, of which 1,047.64 was occasioned by malarial fevers and 372.93 by diarrheal diseases. One hundred and one men were discharged from service on account of disability, 92 from disease, and 9 from injury, equivalent to the respective rates of 12.50, 11.38, and 1.11 per thousand of strength. Malarial diseases caused the relatively high rate of 5.62; venereal diseases, 1.86; consumption, 1.24, and gunshot wounds, 0.25. The death rate from all causes was 16.46, as compared with 86 during the previous year under the influences of war. Disease caused a death rate of 14.97, and injury 1.48. Only 1 death from yellow fever occurred among the volunteer troops during this year, causing a rate of 0.12 per thousand men. Malarial fevers caused the highest death rate, 3.71; typhoid fever, 2.72, and diarrheal diseases, 2.35.

The mean strength of the regulars in Porto Rico in 1899 was 3,347. In this command the admission rate for disease was 2,352.85, for injury 275.48; total, 2,628.33. Diarrheal diseases contributed 582.91 to the total rate, malarial fevers 467.28, and venereal diseases 295.18. The discharges for disability, 72 in number, were equivalent to a rate of 21.51, venereal diseases contributing 6.27 per thousand men. The death rate was only 11.35 per thousand, of which 2.19 was due to injury and only 9.26 to disease. Diarrheal diseases and typhoid fever were the prominent causes, the former having contributed 2.99 and the latter 2.69 to the rate of mortality.

Among the small number, 380, of volunteers in Porto Rico, the admission rate dropped to 1,589.47 and the death rate to 10.53 per thousand of strength, 2.63 of the latter being due to injury and only 7.89 to disease.

The regulars in the Pacific islands, with a mean strength of 22,922 in 1899, had an admission rate of 2,630.92—2,454.10 from disease and 176.82 from injury, of which 39.05 per thousand of strength was the result of gunshot. Diarrheal diseases and malarial infections constituted more than half of the cases, the former having a rate of 728.17 and the latter 705.49, a very considerable increase on the rates of 1898, respectively 431.97 and 429.56. The death rate also was higher, 31.10 per thousand of strength, of which 17.80 was due to disease and 13.30 to injury, 9.60 of the 13.30 being the result of gunshot. Diarrheal diseases caused the deaths of 5.72 men per thousand of strength, typhoid fever 3.58, malarial infections 1.23, smallpox 1, and pneumonia 0.79.

In this year the volunteers also had a higher rate of admission than in 1898, due to an increased prevalence of diarrheal and malarial diseases. The death rate from all causes was equal to a loss of 29.83 men per thousand of strength during the year, but only 11.80 of this was caused by disease. Injuries were responsible for 18.03 of the admission rate, of which 16.81 resulted from gunshot. The prominent fatal diseases were smallpox, which caused 3.36 deaths per thousand men, diarrheal diseases 3.18, typhoid fever 2.20, pneumonia 1.14, and malarial infections 0.43.

The regulars at the home posts had a mean strength of 26,208 in 1899. The admission rate for this command was 1,772.17 per thousand of strength—1,551.47 for disease and 220.70 for injury; 363.37 of the rate was due to malarial infections, mostly the result of foreign service. The death rate was light, only 6.72 from disease and 1.56 from injury; a total of 8.28 per thousand of strength for the year.

The volunteers at the home posts, with a mean strength of 15,984, had an excellent record, which compares favorably with that of the Regular Army in times of peace. The death rate from all causes was only 7.26 per thousand men, 0.94 due to injury and 6.32 to disease. The chief items constituting this death rate were pneumonia 2.38, typhoid fever 1.19, diarrheal diseases 0.38, and malarial fevers 0.37.

The following tabulation presents many interesting points relating to the mortality among our troops during the past two years:

*Annual death rates per thousand of strength among volunteer and regular troops serving in Cuba, Porto Rico, the Philippine Islands, and the United States during the years 1898 and 1899.*

| Deaths. | Cuba. | | | | Porto Rico. | | | |
|---|---|---|---|---|---|---|---|---|
| | 1898. | | 1899. | | 1898. | | 1899. | |
| | Volunteers. | Regulars. | Volunteers. | Regulars. | Volunteers. | Regulars. | Volunteers. | Regulars. |
| All causes | 86.00 | 98.16 | 16.46 | 19.55 | 52.09 | 41.45 | 10.53 | 11.85 |
| All injuries | 12.85 | 37.01 | 1.48 | 2.26 | 2.66 | 2.07 | 2.63 | 2.09 |
| Gunshot injuries | 11.91 | 33.33 | .62 | .92 | 1.86 | 1.04 | ........ | .60 |
| All diseases | 73.65 | 61.15 | 14.97 | 17.29 | 49.43 | 39.38 | 7.89 | 9.26 |
| Typhoid fever | 22.05 | 14.17 | 2.72 | 5.26 | 40.66 | 22.80 | 2.63 | 2.69 |
| Yellow fever | 15.88 | 17.57 | .12 | 4.17 | ........ | ........ | ........ | ........ |

*Relative prevalence of disease among white and colored troops.*—During the past two years the rates of admission to sick report and of discharge for disability were practically the same among the white and the colored troops. The death rates from all causes were, however, somewhat lower among the latter, notwithstanding a loss of 5.13 per thousand of strength from injury in 1898, as against 2.91 among the white troops.

Although the admission rates were practically the same for both races, some differences may be observed in the items which make up the totals. Thus the colored troops had relatively fewer cases of measles, mumps, smallpox, diphtheria, cerebro-spinal fever, typhoid fever (see page 734), and alcoholism, with considerably less of diarrheal diseases, than the white troops. For alcoholism the rates of admission were only 2.94 and 5.65 in 1898 and 1899 among the colored troops, as compared with 8.95 and 15.11 among the white troops. For diarrheal diseases the rates of the colored troops during these two years were 168.11 and 164.96, as compared with 400.24 and 395.99 among the whites. On the other hand, the negro troops slightly exceeded the white troops in their admission rates for yellow fever, malarial fevers, erysipelas, rheumatic fever, consumption (see page 784), diseases of the respiratory organs, and very considerably in their rates for venereal diseases. Among the colored troops in Cuba in 1898 there were 232 cases of yellow fever, with 36 deaths, giving the respective rates of 146.19 and 22.68 per thousand of strength, while the corresponding rates for the white troops serving in Cuba at the same time were 132.58 and 15.24. It is to be noted, however, that the unusual prevalence of this disease among the colored troops was due to special influences affecting one regiment, the Twenty-fourth United States Infantry. One hundred and sixty-seven of the cases and 23 of the deaths occurred in this regiment, concerning which Col. Charles R. Greenleaf, assistant surgeon-general, United States Army, reported, August 24, 1898:

> I was much embarrassed in taking care of the sick by the lack of nurses and proper guards, and applied twice to the general commanding the Fifth Army Corps for troops to perform this duty, but he declined to furnish them. On my appeal to General Miles, however, he promptly ordered the whole of the Twenty-fourth Infantry to report to me for duty. This regiment made a night march, arriving at Siboney early the next morning. The necessity for aid was so urgent that I requested the commanding officer to call for volunteers from that regiment to serve in the yellow fever hospitals. This request brought forth a prompt response, more that twice the number of men required volunteering for this perilous duty. I desire to bring to the notice of the General Commanding the Army the conduct of these men. The cheerfulness with which they did their duty under the most adverse circumstances, and the promptness with which they volunteered for any service with the sick deserves, in my opinion, a special commendation.

An excess of malarial infections among the colored troops is observed in the statistics for the years 1898 and 1899, when the rates for the white and the colored troops of the whole Army are compared. The admissions for the white troops were equal to an annual rate of 591.44, and for the colored troops to a rate of 675.77, per thousand men of each race. This, however, does not imply a greater susceptibility on the part of the colored men, but is referable to the fact that during a part of the time all the colored regiments were exposed to Cuban malaria, while only a relatively small proportion of the large force of white troops was similarly exposed. To ascertain relative susceptibility of the two races we must compare the rates of troops operating in the same malarious localities. In 1898 the admission rate for malarial diseases of the Regular Army in Cuba, including two infantry and two cavalry regiments of colored troops, was 1,174.94 per thousand of strength, but the rate of the colored regiments was only 768.53.

Venereal diseases in 1898 caused 149.58 admissions per thousand of strength among the colored men, and in 1899 195.92, as against 78.48 and 128.59 among the white troops during these years.

*Seasonal prevalence of disease.*—With a mean monthly admission rate of 165.46 for all diseases in 1899, the seasonal curve for the Army as a whole began in January with the high rate of 178.04 per thousand of strength. It fell in February and March, and in April reached a minimum of 140.54. During the next four months the rate rose to the maximum of the year, 179.78, in August. In September the rate fell below the mean, but rose to about the level of the latter during the last three months of the year. There is little to be learned from a study of this curve of prevalence, for the climatic and other influences which affected it were too complex to be considered from this point of view.

Even when we compare the prevalence of disease among troops in the United States in 1899 with the recorded prevalence in former years, differences are found which are evidently not due to climatic conditions in this country, but to previous service of the troops in other climates.

During the decade 1888–1897 the monthly admission rate was usually high in January from influenza and bronchitic attacks. From this point it fell to a minimum in April, after which it rose, slowly during May and June, and rapidly in July and August, to the maximum of the year. It remained high in September, but fell again during the last three months of the annual period. The wave of prevalence during the months of July, August, and September was due to malarial diseases. Prior to the decade mentioned this autumnal wave was larger than in recent years, and there was frequently a slight prominence in the curve in May or June, corresponding with a sudden increase of cases of intermittent fever. During the past year the curve of prevalence of disease among United States troops in garrison in the United States changed considerably from the characteristic curve of former years. The mean monthly rate of admission was 124.73, due to large rates in January, February, and March; the maximum in January, 180.61. The rates of all the other months were below the mean, the lowest having occurred in July and December, 80.84 and 80.38. The large rates of the first three months of the year were caused in part by diseases of the respiratory organs, and very considerably by recurrences of malarial affections contracted in Cuba and Porto Rico during the year 1898. The death rate was above the mean monthly rate of the year during the first five months and below the mean during the remaining months. The larger death rates of the earlier months were due to pneumonia and typhoid fever.

The following table shows the prominence of certain diseases among the troops stationed in the United States in 1899. Similar tables relating to troops in the Philippines, Cuba, and Porto Rico will be found on pages 597, 677, and 697.

## CAMPS OF UNITED STATES VOLUNTEER REGIMENTS IN THE UNITED STATES.

In preparing the camps in which the United States volunteer regiments were organized the utmost care was taken to provide for the comfort and well-being of the men. The tentage consisted, generally, of conical wall tents, with an average of 8 men to a tent. The streets were wide and the tents along each side were placed at the width of a tent apart. All the tents were floored, the flooring well raised from the ground. Special latrines were provided, the contents of which were regularly flushed into a sewerage system or emptied by an odorless excavator. Policing was done by civilian labor. Water supplies were furnished from good sources and delivered by faucet in convenient places. Bath houses, with hot and cold water, gave the needful facilities for personal cleanliness. The kitchens and mess rooms were carefully supervised and the general sanitary conditions were excellent. I submit in this place two reports, one showing the condition of the Thirty-Fifth, the other of the Forty-Fifth United States Volunteer Infantry.

### REPORT ON THE SANITARY CONDITION OF THE THIRTY-FIFTH UNITED STATES INFANTRY VOLUNTEERS, AT VANCOUVER BARRACKS, WASH., AUGUST 31, 1899, BY MAJ. R. G. EBERT, SURGEON, UNITED STATES ARMY.

The camp as now occupied was partially planned for the muster out of the Second Oregon. The tentage and grounds of the First Battalion and the field hospital in the post hospital inclosure were erected for that purpose. The various camp sites are on a gentle southern slope, with a fall of about 4 feet per 100, soil gravelly, covered with natural sod, readily absorbing moisture, and, with the exception of the neighborhood of the latrines of the Second Battalion, well drained, as proved by recent storms. Camp of Third Battalion is entirely in the open; of Second adjoining a small grove of locusts and some scattering maples; of First in the open ground. Tentage is all floored and raised above the ground. Second and Third battalions are in Sibleys, with 8 or 9 men in a tent; First Battalion in A wall tents, 3 men to a tent. Bedsacks and straw are furnished. At present no means of heating is provided, though floors are arranged for Sibley stoves in the conical wall tents.

The kitchens are beneath open sheds, 12 by 12 feet, and have complete field outfits; mess sheds, 60 by 20 feet, at opposite end of street to latrines. Ample tables and benches are provided for each organization. Water at each kitchen, the hydrant being under absolute control of cook, by removal of handle of faucet and placing it in his charge to prevent unauthorized use and consequent muddiness of ground; drippings caught in buckets. Meat safes, 48 by 36 by 30 inches, with screened sides and doors, located above ground, have been furnished, to prevent contamination of food by flies and to allow free access of air. Kitchen refuse, when not burned, is placed in a covered receptacle, which is emptied twice daily, or oftener if necessary; barrels scalded at each emptying and washed with hydrate of lime; attention is also given to the cleanliness of lids and the outer surface of barrels. All refuse of kitchen is removed in closed sanitary carts and dumped in the deep water of the Columbia River. Thorough cleanliness of all surroundings of kitchen and camp is constantly dwelt upon, and when ground is accidentally soiled by spilling of dishwater it is immediately covered with fresh earth or ashes.

Each company of the Second and Third battalions has latrines 10 by 20 feet, accommodating 14 persons. This consists of two zinc-lined troughs, 14 feet by 25 by 17 inches, with a fall of 4 inches, to assure free flushing. Water is admitted at upper end by faucet, while the escape into sewer, properly trapped, is by "Demorest valve." Both entrance and outflow are under control of civilian employees, being guarded by lock and key to prevent unauthorized meddling. The troughs are emptied twice daily, the water standing at least 3 inches deep in the shallowest places, mixed with hydrate of lime, and this is stirred at frequent intervals (paddles or brooms kept in a solution of lime). Toilet paper only is allowed to be used, and is supplied freely by the Quartermaster's Department. Urinals, constantly flushed with water and properly "limed," are connected direct with sewer, with due precaution as to trapping. Sewer ventilation is by standpipe, extending above each latrine.

The First Battalion has but two latrines, one for each two companies; these having been constructed earlier, have smaller troughs, but are similar in sanitary arrangement. Urine tubs, two to each company, provided with hydrate of lime, are placed in streets at tattoo and removed and cleaned at reveille. The commanding officer of the regiment has been requested to give necessary orders for their proper use.

On the outer wall of each latrine a zinc-lined trough 20 feet by 18 by 4 inches, water supplied by four faucets, serves for lavatory purposes. Three companies of the First Battalion have lavatory at different places than latrines, but all are connected with sewer. The latrines and police of grounds are attended to by civilian employees of the Quartermaster's Department. One caldron of 75 gallons' capacity is furnished each battalion for laundry purposes. The bath room is a model, and a permanent addition to the post. The building is well constructed and is 23 by 40 feet, with annex 16 by 25 feet for steam tubular boiler of 40-horsepower capacity (size of boiler, 44 inches in diameter and 10 feet long). The system is the "Gegenstrom." On a concrete floor, sloping to a central drain properly trapped and connected with sewer, are erected 48 closets, each 3 by 4 feet, 12 each on north and south wall directly facing similar ones in the center of the building. Those in the center are for bathing, and those on the outer wall for dressing. Shower baths, temperature from 52 to 115 degrees, can be given to either 4 or 24 men at one time. The regulation of temperature and the flow of water is in the hands of a civilian attendant, a thermometer showing the absolute degree of heat. Allowing four minutes each for undressing and dressing, and six minutes for bathing, the capacity of the house is 96 men per hour. Baths are now ordered at from 93 to 95 degrees, finishing with a final dash of cold water. The house is open from 8 a. m. to 5 p. m. All closets being on iron supports 6 inches above the ground, thorough cleanliness is assured. Steam radiators will be necessary in the winter. Ventilation is properly provided.

The food supply is that authorized by regulations, and is of good quality. The post bakery is furnishing bread, but its capacity is hardly equal to the demand, and in the rapid baking the bread has not always been the best. Field ovens should be established, or if a permanent increase in the strength of the command to present proportions is contemplated, then an addition to the present plant should be made. The cooking, as a rule, is satisfactory. Some of the recruits stated that food was insufficient; this complaint is probably based on the fact that the exercise of drill has caused a more healthy assimilation in the sluggish, and possibly some temporary lack of experienced management while companies were being organized may have been in operation. Frequent inspections have shown but few instances where this complaint was justified, and never in an organized company. Attention has been invited to restricting men in the indulgence of unripe fruit, and the sick report has been materially increased by the nonobservance of this matter.

The water supply of this post can be brought to 320,000 gallons per day. Former analyses show it almost absolutely pure, and for the present strength of command it is more than ample.

The clothing issued is not entirely satisfactory. Leggings are of poor material and workmanship; complaint has been made of the eyelet pulling out and the straps breaking. Shoes, both black and russet, are too low in the instep for many individuals. Socks are said to be of inferior quality. Some complaint has been made of the blouses, both in regard to quality and workmanship. To recruits just joining there should be an issue of towels, as without them and with no money to buy, it seems that cleanliness must suffer. The khaki is said to be of good quality; the same can be said of underclothing and blankets.

Habits of the men seem to differ as to the locality from which they were recruited. As a rule, the men from the Western States are a more desirable class. Under the constant drill and discipline imposed by the commander of the Thirty-fifth Infantry, there is a daily improvement not only in the soldierly appearance, but in the moral tone.

Besides the Thirty-fifth Infanty, there are at this post 538 volunteer recruits. These are quartered in barracks and organized into casual companies. The number of men assigned to each building is in excess of that for which the building was intended, and to remove any possible bad effect of overcrowding, it has been recommended that all upper sashes of windows be lowered at least 4 inches, to insure an abundance of fresh air. As soon as these recruits are received at post they are bathed, but owing to an insufficient supply of clothing—it having been expected that but 1,309 men would be sent here—these men are waiting for uniforms, for which telegraphic requisitions have been duly made.

The sanitary condition of the post is shown as follows: Regulars present, 132; sick, 0. Volunteers present, 1,859; sick, 27. Of these 27 cases 7 are injuries, 4 venereal diseases, 6 malarial diseases, and 10 miscellaneous.

## SANITARY CONDITION OF THE CAMP OF THE FORTY-FIFTH UNITED STATES INFANTRY VOLUNTEERS, AT FORT SNELLING, MINN., SEPTEMBER 27, 1899, REPORTED BY LIEUT. COL. H. R. TILTON, CHIEF SURGEON, DEPARTMENT OF DAKOTA.

The camp is well located on a high plateau, and extends in a northeast and southwest direction. The surface covered by the companies and band measures 172 feet by 988 feet. The entire camp, including regimental headquarters, battalion officers' tents, companies, and latrines, occupies a surface of not quite 10 acres. The tentage provided has been most liberal; 14 conical wall tents for each company allows 1 conical tent for 8 men, besides giving a first sergeant a separate tent. The tents have all been provided with floors, and arrangements are being made for heating stoves. Water from the Fort Snelling waterworks has been piped to each company, one faucet being at the company kitchen, the other near the latrines. The latrines have only been in use a short time, and, so far as I observed, they admirably serve the purpose. One difficulty is the supply of toilet paper. For the satisfactory working of the latrines, newspapers and the coarser kinds of paper which float above the surface are objectionable. So soon as a company can provide a fund by saving on surplus rations and profit of the canteen, such necessary articles can be purchased out of the company fund. When a regiment is organizing, with no fund available, some provision ought to be made to bridge over the period intervening until a fund can be made. Now the Subsistence Department is authorized to provide toilet paper for prisoners, but for no other portion of the command. A bath house has been constructed with capacity for 24 shower baths. The boiler has not yet arrived, and until it is put up the men have no facilities for bathing nearer than the barrack bathrooms. A place for washing faces and hands in connection with the bathing arrangements would add much to the comfort of the men, and in this connection hot water should be provided for washing the individual mess kits after each meal. This is usually provided by means of a camp kettle over a pit and open fire, but this requires turning up the soil, and the design in the present camp is to avoid digging up the soil as much as possible.

The company kitchens, as well as the hospital and band, have been provided with the Donavin-Myers field range. This is made of sheet steel with cast-iron top, and measures 21 by 21 by 39 inches, and is a most convenient and economical method for use in the field, although such a range could not be carried with a pack train, while the Buzzacott cooking oven and stove is more portable. I saw the cooking arrangements and the serving of dinner, which was well prepared. The bacon was excellent. The garbage is received in galvanized iron barrels, and contents removed twice daily. The contents of the latrines are removed once daily by means of an odorless excavator. This work is done by a contractor. A galvanized-iron barrel is to be placed in each company street for use as a urinal at night, and removed each morning.

The hospital has the full allowance of tents, and floors were being brought into camp for the hospital, and stoves were also to be put up. Only two mild cases of disease were in the hospital, which is provided with 10 cots. One was a case of intermittent fever and one a case of sore throat. The hospital has its complete outfit of medical and surgical appliances. Two thousand first-aid packages have been called for, and authority has been given to purchase the necessary quicklime and crude carbolic acid for use in all the latrines in camp. The regiment has its authorized 3 hospital stewards and 8 hospital corps privates; 4 more privates will be required to complete the full allowance. All the men in the command have been vaccinated.

The only criticism I have to make as to the arrangement of the camp is that, in my opinion, where the ground will permit, at least 20 acres should be occupied by a regiment of 1,200 men.

## DIVISION OF THE PHILIPPINES

### HEALTH OF THE TROOPS.

In the Philippine Islands, in 1898, with a mean strength of 9,907 regulars and volunteers, the admission rate for all causes of disability was 1901.99 per thousand of strength; for disease, 1776.72; for injury, 125.26; for gunshot injury, 13.02. The death rates corresponding to these admission rates were respectively 24.12, 20.49, 3.63, and 2.93. Malarial fevers contributed the largest proportion, 424.55, to the admission rate, but only 1.51 to the death rate. Typhoid fever, though forming only 83.77 of the admission rate, caused 8.78 of the 20.49 deaths from disease per thousand of strength, the cases numbering 830 and the deaths 87. Diarrheal diseases gave an admission rate of 399.60, with a death rate of 2.52 per thousand men. The number of cases was 3,959 and deaths 25. Seventy-five cases of smallpox, of which 21 were fatal, gave rates, respectively, of 7.57 and 2.12 per thousand of strength.

In 1899, with a mean strength of 39,280 regulars and volunteers, the admission rate for all causes of disability was 2395.52 per thousand of strength; for disease, 2206.36; for injury, 189.16; for gunshot injury, 52.26. The death rates corresponding to these admission rates were, respectively, 30.58, 15.28, and 12.60. Although the admissions for disease were considerably increased during this year, 2206.36 per thousand men as compared with 1776.72 in 1898, and although the death rate from all causes 30.58 as compared with 24.12 in 1898, the death rate from disease became reduced from 20.49 to 15.30 per thousand men. The increased admission rate was due to diarrheal diseases, malarial infections, and injuries. Diarrheal diseases formed 642.80 and malarial infections 624.37 of the total admission rate. The lessened rate of mortality from disease resulted from a lessened prevalence of typhoid fever, with a consequent lowering of the death rate from that disease. Eight hundred and sixty-two cases of this fever, of which 118 were fatal, gave an admission rate of 21.95 and a death rate of 3 per thousand of strength. The lower death rate was also in part due to the milder character of the malarial infections, the death rate from these diseases being only 0.89 as compared with 1.51 in 1898. These influences lowered the death rate from disease, notwithstanding a very material increase in the malignity of the diarrheal diseases, which gave a death rate of 4.58 per thousand men as compared with 2.52 during 1898. The increase in the totality of the death rate was the consequence of active service as expressed by the mortality rate for gunshot injury, 12.60 per thousand of strength as compared with 2.93 during the previous year. Two hundred and sixty-seven cases of smallpox, 78 of which were fatal, gave rates, respectively, of 6.80 and 1.99 per thousand of strength.

*Seasonal prevalence of disease.*—In the Philippine Islands in 1899 the mean monthly rate of admission for disease was 183.86. In January the rate was considerably below this mean. The minimum, 93.08, was reached in February, after which the rates rose slowly in March and April and rapidly in May and June until the maximum, 223.56, was reached in July. The rates fell slowly during the remaining months of the year. The rapid increase from May to July was due partly to malarial infections, but chiefly to diarrheal diseases. Lessened prevalence of the latter during the later months lowered the rate of admission, notwithstanding continued high rates for malarial infections. But it can not be inferred from these records that the first four months of the year constitute the healthy season, while the second four are characterized by a maximum prevalence of diarrheal diseases, and the last four by a maximum prevalence of malarial fevers, because among the unsanitary influences affecting the troops during this year were those of active and exhausting field service, which certainly exercised a considerable modifying effect on those of climate and season.

The mean monthly death rate from disease was 1.28 per 1,000 of strength. The rate was considerably below this during March, April, May, and June. In July and December the rates differed but little from the mean. During the other months they were higher than the mean, that for September, 1.84, being the highest; and all may be said to have been due to the increased fatality of diarrheal diseases. The following table shows the prevalence of certain diseases by months in these islands:

*Seasonal prevalence of disease among troops in the Philippine Islands during the calendar year 1899.*

Medical officers in the Philippines, as elsewhere, have been earnest in their recommendations for the welfare of the men, and commanding officers have usually acted promptly, so far as lay in their power, to carry the recommendations into effect. It has been difficult, however, and, indeed, impracticable to control many of the insanitary conditions, particularly during the progress of the campaign against the insurgents. In many localities the ground was saturated with water, and drainage impossible. Efforts have been made to prevent the troops from frequenting the houses of low-class natives, where infectious diseases are exceedingly common. Special attention has been given to the quarters of the men and to the care of the sinks and earth closets, to the purification of the drinking water, to the supply and preparation of food, the supervision of the laundry work, and the installation of shower baths where there were no other facilities for bathing.

The exposures, fatigues, and excitements of a prolonged campaign are responsible for the large sick report and the relatively large death rate among the troops in the Philippines. The difference is said to have been startling between the sick rate of regiments at the front doing constant outpost duty, subject to night attacks, and having to make periodical advances through difficult country, and that of regiments doing garrison duty at towns in the rear. This difference has been manifested even where the permanent stations have been in insanitary localities. A battalion at Candaba, a badly drained town with insanitary surroundings, had a sick rate of only 8 per cent, while at the same time troops at Angeles, a well-drained town with a sandy soil, gave a rate of 25 per cent. The troops at Candaba had been on ordinary garrison duty for some time, while those at Angeles had fought their way from San Fernando by successive attacks.

Indeed, the opinion is prevalent among our medical officers that in time of peace and doing only garrison duty the sick rate of the Army in the Philippine Islands would be no higher than it ordinarily is in the Southern United States.

The latest reports received from the chief surgeon, Division of the Philippines, dated August 15, 1900, show a percentage of 8.47 sick for the command, which on that date had a strength of 60,554. There were:

| | |
|---|---:|
| Sick in quarters | 1,261 |
| Sick in regimental hospitals | 1,119 |
| Sick in military hospitals in departments | 1,241 |
| Sick in Manila hospitals | 1,508 |
| Total sick | 5,129 |

The general character of the diseases affecting the troops may be gathered from the following statement, consolidated from the reports of the military and Manila hospitals for August 11, 1900, including a total of 2,807 cases:

| Diseases. | Number of cases. | Percentage of total sick. | Diseases. | Number of cases. | Percentage of total sick. |
|---|---:|---:|---|---:|---:|
